Tunisia was settled by the Phoenicians and Carthaginians in ancient times. Except for an interval of Vandal conquest in 439–533 A. D., it was part of the Roman Empire until the Arab conquest of 648–49. Then it was ruled by various Arab or Moorish dynasties until the Turks took it in 1570. The practice was for the occupation troops to elect the individual ruler. The founder of the present dynasty, Hussein ben 'Ali, was so elected in 1705 and later succeeded in making the office hereditary, while subject to nominal Turkish sovereignty.

Throughout much of its history, Tunisia was essentially a pirate state, preying on Mediterranean shipping. In modern times, Italy became predominant economically in the area, but after French troops occupied the area in 1881, the reigning Bey signed a treaty acknowledging a French protectorate.

Following the Allied landings in North Africa in 1942 in World War II, Tunisia became a battleground with the Axis forces pinched between the British 8th Army from Egypt, and the U. S., British and French forces from Algeria. The Axis units surrendered in May, 1943 and Tunisia was turned over to the De Gaulle government. On May 15, 1943, the reigning Bey, Sidi Mohammed al-Mounsaf, was removed and replaced by his cousin, the present ruler.

In government, although the Bey is theoretically sovereign, a French resident general actually controls all military and civil affairs, assisted by a cabinet of eight French and three Tunisian ministers. Local administration is under native officials under the close supervision of the French. The Southern Territory is subject to military administration. Tunisian courts hear cases involving natives only, and French courts hear all other cases. French occupation forces number about 25,000 in addition to native regiments and the Foreign Legion.

In 1937 Tunisia's 492 public and thirty-five private schools had 96,520 pupils, about a third of them French and Italian. The Great Mosque at Tunis is a Moslem Uni-

versity, and there are 1,338 Moslem private schools. Tunisia's population is concentrated in the cities and on the coast. There are only about 100,000 nomads. The Moslem majority is mostly Berber, mixed with Arab.

Agriculture is the chief industry. Over a quarter of the arable land is in wheat, of which 1939 production was 546,741 tons. Other important crops are barley, oats, corn, sorghum, beans and peas. Average annual wine production is about 38,000,000 gallons. Olive oil production in 1938 was 84,877 tons. The Cape Bon region is largely devoted to citrus fruits. The southern oases yielded about 25,000 tons of dates in 1938. Tunisia exports over 50,000 sheep and 4,000 tons of wool a year. The 1939 livestock census showed 2,687,081 sheep, 1,406,827 goats, 478,543 cattle, 152,226 camels and about 5,000,000 fowl.

Major industries include flour milling, oil refining, lead smelting and distilling. Native industries flourish, including the spinning and weaving of wool, and the making of pottery and leather goods.

Tunis, Algeria and France are under a single customs union for a number of products. Exports in 1939 totaled \$31,772,000, of which 62 percent went to France. They included olive oil, wine, wheat, phosphates, iron ore, lead and esparto grass. Imports were \$37,222,000, of which 66 percent came from France. The leading items were cotton cloth, machinery, metal products, autos, rice, sugar and coal.

Tunisia had 4,800 miles of roads and 1,310 miles of railway in 1938. Tunis, Bizerte, Sousse and Sfax are the principal ports, and eighteen others are of minor importance. Total cargo handled in 1938 was 4,060,000 metric tons.

Ordinary revenue for 1946 was estimated at 4,201,760,000 francs, and expenditures about the same. There was an extraordinary budget balanced at 6,475,420,000 francs for public works, education and agricultural research. State monopolies, including tobacco, provide about 25 percent of the revenue and indirect taxes, about 50 percent. The public debt in 1938 was \$29,057,096.

Tunisia, at the northernmost bulge of Africa, thrusts out toward Sicily to mark the division between the eastern and western Mediterranean. It is mountainous in the north, covered by plains in the east, and projects southward to the Sahara area. Its principal river, the Medjera, in the north, is 228 miles long. The climate is Mediterranean with temperature extremes at Tunis of 52.7 and 79.2 degrees. Rainfall ranges from 24 inches in the north to less than eight inches in the south.

Tunisia has almost inexhaustible deposits of phosphates mined principally in

the Gafsa and Kef regions. Production in 1939 was 1,772,548 tons. Its iron ore 842,963 tons in 1939—is of good quality. Other minerals are lead, zinc, mercury, manganese, copper, salt and the poor grade lignite of Cape Bon.

Products derived in 1938 from Tunisia 2,500,000 acres of forests included 3,636,000 board feet of lumber, and 4,517 tons of mine props and cork. Alfa—127,000 tons in 1938—is exported, mainly to England, for the making of paper pulp. About 15,000 Tunisians work at fishing. Their 1939 catch totaled 12,110 tons valued at about \$1,300,000. Annual sponge production averages 125,000 tons.

French West Africa (Colony)

(L'Afrique occidentale française)

Area: 1,814,808 square miles.

Population (est. 1941): 15,582,535.

Density per square mile: 8.6.

Governor-general: Pierre Charles Cournaire.

Principal cities (est. 1938): Dakar, 100,000 (capital, chief port); St. Louis, 33,589.

Monetary unit: French franc.

Racial stock (1941): Native except 41,500 French and 8,689 other Europeans.

Languages: French, native tongues.

Religions: Mohammedan, Pagan.

The St. Louis Colony, founded in 1626 at the mouth of the Senegal River, was probably the first permanent white settlement in French West Africa in which the French established themselves, largely for the purpose of pursuing the slave trade. Little progress inland was made until after 1854 when a scheme was conceived to link the upper Senegal with the upper Niger. After 1876 the coast settlements extended themselves steadily into the interior through a series of missionary and economic campaigns. In 1895 the colony, French West Africa was formed under the Governor-general by the unification of its various components.

The Governor-general of the colony is appointed by the French government and is assisted by a legislative council. Governors responsible to him administer the eight constituent colonies—Senegal, French Guinea, Ivory Coast, Dahomey, Dakar, French Sudan, Mauretania and Niger. Each of these has considerable autonomy, with the central colonial government supervising services common to all. The area is represented in the French National Assembly.

In 1936-37, the colony had 306 rural schools with 24,931 pupils; eighty-four secondary schools with 21,941 pupils; twenty-two urban schools with 8,037 pupils; twenty secondary schools, in Dakar and St. Louis, had 843 pupils; and seven Moslem schools

had 350 pupils. Total attendance of seventy-three private schools was 10,848.

No racial unity exists in French West Africa, and there is great variation of physique, manner, custom and language. Tribes not Negroid include the Saharans, Moors, Tuaregs and Fulbe. About half the population normally is Moslem, but a number of tribes have remained spirit worshippers.

Agriculture has expanded rapidly in recent years. Millet, rice and maize are the principal food crops, and vegetable oils are a chief commercial product. Groundnuts (788,916 tons in 1937) are cultivated in Senegal, and palm kernels and oil are produced in Dahomey and Ivory Coast, along with coffee, cotton, cacao and bananas. Stock raising is important in French Sudan and Mauretania, relatively dry districts in the northern part of the colony. Manufacturing is undeveloped except for small native industries.

Imports in 1942, with France supplying nearly 75 percent, totaled \$37,940,000, including cotton cloth, metal products, vehicles, machinery, wine, beer and spirits. Senegal and Ivory Coast account for over half the exports which totaled \$30,237,000 in 1942 and included groundnuts, coffee, bananas, cotton, cacao, palm kernels and oil, with France taking about 75 percent of the total.

The middle Niger and lower Senegal rivers are navigable but French West Africa's railways (2,314 miles in 1938) are more important as interior communications. Dakar, with the best harbor on the west African coast, is the principal port and also an important stop on international air routes between South America and Europe. There are several other good ports.

The estimated budget for 1943 balanced at 3,017,818,500 francs, about a third of which was the local budget total of the eight component colonies.

The colony, a sixth of Africa and half as big as Europe, is, generally, a plateau broken by two mountain ranges. The Futa Djallon, from 2,300 to 4,900 feet in elevation, parallels the coast for about 430 miles, and Mount Nimba, on the Liberian border, rises 5,250 feet. There are also mountainous regions in the Sahara districts to the north. The Niger, 2,550 miles long, the third longest in Africa, is the principal river. At about half its course it becomes a wide inland delta, subject to floods in the rainy seasons, and covers a wet area eighty-five miles wide at Mopti. Numerous other rivers include the Senegal, 1,037 miles long. Gold, found in alluvial deposits in Senegal and in veins in the Ivory Coast, is the only important mineral. Output in 1938 was 127,220 ounces. Timber and precious woods are important, es-

pecially in Ivory Coast. Gum from the dry acacia resin is a leading product in Mauretania. Main forest products in 1937, in short tons, included: timber, 22,155; mahogany logs, 28,609; gum arabic, 5,688; shea butter (a solid, white fat obtained from the seeds of the shea tree) and nuts, 6,779; kapok, 1,219; and beeswax, 635. Some ivory and rubber is exported.

Togo. Status: Mandate. **Capital:** Lome (pop. 1938: 14,380). **Commissioner:** Jean Noutary. **Foreign trade (1938):** Exports \$1,915,000 (66.4% to France, 8.5% to Britain); imports \$2,123,000 (22.8% from Britain, 16.7% from France, 11.3% from Japan); chief exports, cacao 28.7%, palm kernels 16.1%, corn 16%, cotton 11%, copra 6.4%. **Agricultural products:** cacao, palm kernels and oil, cotton, copra, coffee. **Minerals:** iron ore. **Forest products:** dye woods, oil palms.

Togo, a part of the former Slave Coast, lies between the British Gold Coast colony and French West Africa. Established as a German colony (1884), the area was divided as a League mandate by France and Britain at the end of World War I, with France obtaining two thirds of the total area. It is administered by a commissioner responsible to the French government assisted by an economic and financial council composed of officials, merchants, and nine elected native delegates. Agriculture and grazing are the chief industries. In 1941, there were 631 Europeans. The coast line, only 32 miles long, is low, sandy and without harbors.

French Somaliland. Status: Colony. **Capital:** Djibouti (pop. 1938: 20,000). **Governor:** M. Chavet. **Foreign trade (1943):** Exports, 157,000,000 francs; imports, 192,000,000 francs; chief exports, coffee, hides, salt. **Mineral:** salt.

French Somaliland lies at the southern entrance to the Red Sea on the Gulf of Tajura. The area was acquired by France between 1883 and 1887 by treaties with the Somali sultans, although posts on the coast had been acquired in 1864. The only importance of the small, largely arid and sparsely populated region lies in the port of Djibouti, the main artery of trade with Ethiopia by virtue of the Djibouti-Addis Ababa railway. The colony is administered by a governor, responsible to the French government and assisted by an advisory council. It adhered to the Free French movement by an agreement initiated in December 1942. In 1944 there were 629 Europeans.

Madagascar. Status: Colony. **Capital:** Tananarive (Antananarivo) (pop. 1936: 126,515). **Governor General:** Pierre de Saint-Mart. **Foreign trade (1938):** Imports, \$17,347,000 (75.4% from France, 5.3% from the U. S.); exports, \$23,583,000 (78.4% to France, 5.6% to Britain); chief exports,

coffee, 31.9%, vanilla, 9.1%, meat, 7%, corn, 5.2%, sugar, 4.4%, cloves, 4.4%. **Agricultural products (1939):** rice (485,-012 tons), coffee (32,518 tons), sugar (262,-347 tons), manioc, bananas, corn, coconuts, sweet potatoes. **Minerals (1938):** gold (13,770 oz.), graphite (15,873 tons), mica, phosphates. **Forest products:** gum, medicinal plants, rubber, tannins, dyewoods.

Madagascar lies off the southeast coast of Africa and is the fourth largest island in the world. It has a length of 995 miles and an average width of 250 miles. Discovered by the Portuguese navigator Diego Diaz (1500), it remained independent under native rulers until 1885, when it came under French protection. French troops conquered the island (1895) and it became a French colony (1896). The last native ruler, Queen Ranavalona III, was exiled. British troops landed on the island May 5, 1942, an armistice with French forces was signed November 5, 1942. The island is administered by a governor-general responsible to the minister of colonies, assisted by a representative council of 60, half of whom are elected.

The chief occupations are cattle raising (5,000,000 cattle in 1936) and agriculture; there are several food-processing and textile plants. The chief port is Tamatave on the east coast; the capital, Tananarive, is located on the central plateau. In 1936 there were 25,255 French residents and 14,343 other nonnatives including many Hindus, Arabs and other Asiatics. The natives, collectively known as Malagasy, are divided into several tribes. Outlying dependencies include the archipelago of the Comoro islands and the islands of Europa, Juan de Novo, Barren, Bassas da India, Glorieuses, Amsterdam, St. Paul and Kerguelen.

Réunion (Bourbon). Status: Colony. **Capital:** St. Denis (pop. 1941: 32,637). **Governor:** J. Capagorry. **Foreign trade (1943):** Exports, 18,923,000 francs; imports, 181,674,000 francs; chief exports, sugar, 50%, spirits, 26%. **Agricultural products:** sugar, vanilla, cocoa, coffee, maize, manioc.

Discovered by Portuguese navigators in the 16th century, the island, then uninhabited, was taken as a French possession in 1638. Regular colonization began in 1664. The governor, responsible to the minister of colonies, is assisted by a locally elected council with wide powers; the colony is also represented in the French legislature. A bill was passed March 15, 1946, making Réunion a *département* of Metropolitan France as of Jan. 1, 1947. There is no indigenous population. About three-quarters of the inhabitants are of European origin; the remainder are Creoles, mulattoes, Negroes, Indians and other Asiatics. Tropical cyclones of hurricane variety are frequent during the change of seasons; one of the most recent (Jan.

1945) caused damage of over \$1,000,000. Occasionally a "raz de marée" (tidal wave) does great damage. Sugar-cane cultivation and the production of spirits (rum) are the principal occupations. The chief port is Pointe des Galets.

WESTERN HEMISPHERE

St. Pierre and Miquelon. Status: Colony. **Capital:** St. Pierre. **Administrator:** Pierre Garrouste. **Foreign trade (1939):** Exports \$343,000; imports, \$596,000; chief exports cod and other fish products.

The sole remnant of the French colonial empire in North America, the islands were first occupied by the French in 1660. Their only importance is due to their proximity to the Grand Banks (they lie 10 miles south of Newfoundland) which makes them the center of the French Atlantic fisheries.

French Guiana (including Inini). Status: Colony. **Capital:** Cayenne (pop. 1936: 11,704). **Governor:** M. Surlemont. **Foreign trade (1938):** Exports, \$926,000; imports, \$1,334,000. **Agricultural products:** bananas, cocoa, corn, manioc, rice, sugarcane. **Mineral:** gold (1940: 38,000 oz.).

The colony, lying north of the Amazon River on the east coast of South America, was first settled in 1626. Penal settlements embracing the area around the mouth of the Maroni River and the Iles du Salut (including Devil's Island), were founded in 1852. During World War II the colony at first adhered to the Vichy government but the Free French took over in March 1943. The governor, responsible to the minister of colonies, is assisted by an elected council. A bill was passed March 15, 1946, making French Guiana a *département* of Metropolitan France as of January 1, 1947. The colony elects one delegate to the French legislature. The large and scantily populated territory of Inini in the hinterland is administered separately by the governor. Economic development is extremely backward. Gold is by far the chief export.

Guadeloupe. Status: Colony. **Capital:** Basse-Terre (pop. 1938: 13,638). **Governor:** Maurice Bertaut. **Foreign trade (1938):** Exports \$8,532,000 (to France 97.5%), imports \$7,212,000 (from France 63.2%, from the U. S. 16.9%); chief exports, sugar 42.3%, bananas 29.1%, rum 24.2%. **Agricultural products (1938):** sugar (49,900 tons), bananas (55,431 tons), coffee, cacao, manioc, tobacco, vanilla.

Guadeloupe, lying in the West Indies about 350 miles southeast of Puerto Rico, was discovered by Columbus (1493). French colonization began in 1635. The colony, under a governor and elected council and represented in the French legi-

ture, was to become a *département* of Metropolitan France on January 1, 1947. It consists of two large islands, separated by a narrow arm of the sea, and several outlying smaller islands. Most of the population is Negro and mulatto. The largest city and chief port is Pointe-à-Pitre (pop. 1938: 15,511). About half the cultivated area is devoted to sugar cane. The manufacturing of rum and spirits is the principal industry.

Martinique. Status: Colony. **Capital:** Fort-de-France (pop. 1936: 52,051). **Governor:** Georges Parisot. **Foreign trade (1937):** Exports, \$9,347,000 (99% to France); imports, \$8,647,000 (68.7% from France, 14.3% from the U. S.); chief exports, sugar 48.2%, rum 26%, bananas 13.3%. **Agricultural products (1940):** sugar (7,000 tons), bananas, pineapples, cocoa, coffee. **Manufactures:** rum, sugar refining.

Martinique, lying in the Lesser Antilles about 300 miles north of Venezuela, was discovered by Columbus (1502) and was taken for France in 1635. Following the mistice (1940) it had a semiautonomous status under the High Commissioner, Robert, until 1943, when he relinquished his authority to the Free French. The colony, administered by a governor assisted by an elected council, and represented in the French legislature, was to become a *département* of Metropolitan France on January 1, 1947. The population is mainly Negro and mulatto. Most of the arable land is devoted to sugar cultivation. Fort-de-France, the capital and chief commercial center, has an excellent harbor.

ASIA

French India. Status: Colony. **Capital:** Pondichéry (pop. 1941: 53,101). **Governor:** Louis Bonvin. **Foreign trade (1938):** Exports, \$6,492,000; imports, \$2,508,000; chief exports, groundnuts 67.3%, cotton textiles 15.5%. **Agricultural products:** groundnuts, manioc, rice, onions.

French India is a collective name for the scattered French possessions in India on the Caromandel coast, Pondichéry, Arikal and Yanaon; on the Malabar coast, Mahé and Calicut; and in Bengal, Wandernagor. The chief possession is Pondichéry, founded by the French in 174. The governor, responsible to the minister of colonies, is assisted by a private council. Over 90% of the population is Hindu.

OCEANIA

French Pacific Settlements. Status: Colony. **Capital:** Papeete (Tahiti) (pop. 1941: 16,14). **Governor:** Col. Orsell. **Foreign trade (1940)** Exports, \$996,000 (26% to France, 36% to Japan, 25% to the U. S.);

imports, \$1,094,000 (25.5% from France, 31.8% from the U. S., 16.5% from Australia); chief exports, vanilla 40.8%, phosphate 36%, copra 14.5%. **Agricultural products:** coconuts, sugar, vanilla, tobacco. **Minerals:** phosphate (1940: 190,892 tons).

The term French Pacific Settlements is applied to the scattered French possessions in the eastern Pacific—Gambier (12 sq. mi.), Makatea (10 sq. mi.), Marquesas Is. (492 sq. mi.), Rapa (15 sq. mi.), Rurutu and Runatara, Society Is. (636 sq. mi.), Tuamotu Archipelago (322 sq. mi.), and Tubuai and Raiavavae (48 sq. mi.)—which were organized into a single colony in 1903. The appointed governor is assisted by an administrative council. The principal and most populous island—Tahiti, in the Society group (pop. 1941: 23,133)—was claimed as French in 1768. Plebiscites conducted in September 1940 gave support to the former Fighting French movement (Gen. de Gaulle). The natives are mostly Polynesians; over one quarter of the population (12,235) is nonnative, of whom 6,421 are French.

New Caledonia and Dependencies. Status: Colony. **Capital:** Nouméa (pop. 1936: 11,108). **Governor:** J. Tallec (also French commissioner general in the Pacific). **Foreign trade (1938):** Exports, \$4,215,000 (46.9% to France, 33.6% to Belgium); imports, \$4,564,000 (35.5% from France, 30.8% from Australia); chief exports, nickel 66%, chrome ore 14.8%, coffee 8.2%, copra 2.9%, shells 2.7%. **Agricultural products:** coffee, copra, corn, cotton, manioc, rice, tobacco. **Minerals (1944):** nickel (6,400 metric tons), chromite (50,000 metric tons). **Sea products:** mother-of-pearl.

New Caledonia (6,221 sq. mi.), lying about 1,000 miles northeast of Sydney, Australia, was discovered by Captain Cook in 1774 and annexed by France in 1853. The government, in the hands of an appointed governor and an elective council, also administers the Isle of Pines, the Wallis Archipelago, the Loyalty Islands, the Huon Islands, Futuna and Alofi with a total area of 979 sq. mi. The colony—taken over in the summer of 1940 by the Free French after a bloodless revolution—is one of the richest of the Pacific islands in mineral resources, particularly nickel and chrome ore. The natives are Melanesians; about one third of the population is white. A French penal colony was established in the 19th century.

New Hebrides. Status: Anglo-French condominium. **Capital:** Vila. **Foreign trade (1938):** Exports, \$588,000 (97.9% to France); imports, \$547,000 (49% from Australia, 26% from France); chief exports, copra 62.3%, cocoa 23.6%. **Agricultural products:** coconuts, cocoa, coffee. **Sea products:** Trochus and burghaus shell.

The New Hebrides, under joint Anglo-French administration (1914), lie slightly northeast of New Caledonia. The islands, about 40 in number, acceded to the Free French movement after a plebiscite (July 1940). Most of the natives are Melanesians of mixed blood; there were (1939) 212 British, 687 French and 2,282 Asiatic residents. The largest island is Espiritu Santo (875 sq. mi.). The French and British high commissioners in the Pacific are represented by resident commissioners.

Germany

Area (est. 1945): 143,243 square miles.

Population (est. 1945): 63,200,000.

Density per square mile: 441.2.

Allied Control Council: General Joseph T. McNarney (U. S. A.); General Ivan Sokolovsky (U. S. S. R.); Marshal of the RAF Sir Sholto Douglas (United Kingdom); General Joseph Koenig (France).

Principal cities (census 1939): Berlin, 4,332,242 (capital); Hamburg*, 1,682,220 (chief port); Munich*, 828,235 (Bavarian capital); Cologne*, 768,426 (transportation center); Leipzig†, 701,606 (trading, publishing center); Essen*, 659,871 (Krupp steel works); Dresden†, 625,174 (railway center, Elbe port); Frankfurt-am-Main*, 546,649 (manufacturing).

Monetary unit: German mark.

Racial stock: German.

Language: German.

Religions (1933): Protestant, 62.7%; Roman Catholic, 32.5%; Jewish, 0.7%; Others, 4.1%.

*British occupation zone. †U. S. zone. ‡Soviet zone.

HISTORY. In the days of Julius Caesar the territory that is now Germany was inhabited by barbarous tribes that came originally perhaps from Central Asia. One of these Germanic tribes, the Franks, rose to supremacy in western Europe under Charlemagne who was crowned Holy Roman Emperor in 800 A. D. German history may be said to date from the treaty of Verdun (843) when Charlemagne's lands east of the Rhine were conceded to the German prince Louis. Successive regimes were marked by civil strife among the many feudal principalities as well as by conflicts with the popes and Italian princes. For several centuries, almost without exception, the German kings were also heads of the Holy Roman Empire.

Relations between state and Church were changed by the Reformation which began with Martin Luther's ninety-five theses against indulgences and came to a head in 1547 when Charles V led his forces against the Protestant League at Mühlberg. Freedom of worship was obtained by the Peace of Augsburg (1555) but a Counter Reformation took place later and a dispute over the succession to the Bohemian throne brought on the Thirty Years' War (1618-48) which disintegrated the empire and

left it divided into hundreds of small principalities virtually independent of the emperor. Meanwhile, Prussia was developed into a province of considerable strength. Frederick the Great (1740-86) reorganized the Prussian army and defeated Maria Theresa of Austria in a struggle over Silesia. The conflict with revolutionary France hastened the disintegration of the empire and in 1806 Francis II of Austria laid down the Imperial crown. With the defeat of Napoleon at Waterloo (1815), the struggle between Austria and Prussia for supremacy in Germany continued, reaching its climax in the defeat of Austria in the Seven Weeks' War (1866) and the formation of the Prussian-dominated North German Confederation (1867).

At the close of the victorious war with France (1870-71) William I, King of Prussia was crowned Emperor of Germany (Jan. 18, 1871). Under the guidance of the Imperial Chancellor, Prince Bismarck, Germany took a new place in world affairs, the same time expanding her foreign trade and home industry rapidly. The Triple Alliance was formed with Austria and Italy in 1883. However, upon the accession of William II (1888-1918), Bismarck was dismissed and Russia was alienated. International rivalry was intensified in the early years of the 20th century, reaching its climax in World War I in which Germany, supporting Austria-Hungary's demands on Serbia, suffered final defeat. By the terms of the Treaty of Versailles (1919) Germany lost about 27,000 square miles of territory including all her foreign colonies, Alsace-Lorraine, northern Schleswig, Eupen-Mosmedy and upper Silesia, and considerable areas in the east. William II abdicated (Nov. 9, 1918) and a federal republic was organized under the Constitution adopted at Weimar in 1919. The Constitution was attacked by both the Right and Left. Several communist uprisings took place in the early 1920's and in 1923 Hitler's abortive putsch was frustrated. Germany's inability to fulfill the heavy reparations demands stipulated by the treaty led to French occupation of the Ruhr (1923-24). National bankruptcy was avoided by the adoption of the Dawes plan (1924) and later, the Young plan. In 1925 Field Marshal von Hindenburg became president of the republic and in 1926 Germany entered the League of Nations and adhered to the Kellogg Pact.

Germany's postwar political situation was rendered difficult by the multiplicity of parties and the system of proportional representation which hindered the formation of a stable cabinet. The chancellorship of Brüning, leader of the Catholic Center party (1930-32), saw increasing economic and financial distress and a practical cessation of reparations payments. Hitler's rising National Social

erty won a plurality in both the July and November 1932 Reichstag elections but not until the failure of Franz von Papen and Kurt von Schleicher to form effective governments did President Hindenburg name Hitler Chancellor (Jan. 30, 1933). With the death of von Hindenburg in 1934, Hitler became complete master of Germany which was rapidly converted into a totalitarian state under the aegis of the Nazi Party. All other political parties were banned and the Jews were subjected to severe persecution. Through his foreign policy, Hitler repudiated the Treaty of Versailles and began full-scale rearmament. In 1935 he withdrew from the League of Nations and in 1936 signed the Anti-Comintern Pact with Japan, at the same time lengthening relations with Italy. The Rhineland was reoccupied in 1936 and Austria annexed in 1938. By the Munich agreement (Sept. 1938) he gained the Sudetenland and in violation of this agreement he completed the dismemberment of Czechoslovakia in March 1939. But his demands on Poland precipitated British and French declarations of war inaugurating World War II (Sept. 3, 1939).

German troops were victorious in Poland, Norway, Denmark, the Lowlands and finally in their attack on Russia. In late 1942, however, Hitler's "New Order" began to waver to retreat before the ever-increasing power of the Red Army and of Allied air attacks. German forces were ousted from North Africa, southern Italy, and part of Russia by the end of 1943 and with the Anglo-American advance through France the summer of 1944 Germany's military situation became desperate. The combined Anglo-Soviet offensive opened in January 1945 and by April 6 Germany had been split in half. Hitler, believed killed in Berlin on April 30, was replaced as Reichsführer by Admiral Doenitz. The military situation was hopeless, however, and on May 8 Germany surrendered unconditionally. On June 5 an Allied Control Council came into the de facto government of Germany which was divided into four zones occupied by U. S., British, French and Soviet troops respectively.

At the Berlin Conference (July 17-Aug. 2, 1945) President Truman, Generalissimo Stalin, and Prime Minister Attlee set forth the principles by which the Allied Control Council was to be guided. They were: Germany's complete disarmament and demilitarization; destruction of its war potential; rigid control of permitted industry; centralization of its political and economic structure. Nazism was to be uprooted and utterly destroyed and the German general staff broken up for all time. Agriculture and peaceful domestic industries were to be encouraged. Local self-government and free elections were directed toward, a degree of free speech, press, re-

ligion, and free trade unions were to be allowed consonant with the Allied intent to reconstruct German life on a democratic basis and prepare Germany for eventual acceptance among the free and peaceful peoples of the world. Pending final determination of territorial questions at the peace conference, the conference agreed in principle to the ultimate transfer of the city of Königsberg (now Kaliningrad) and its adjacent area to the Soviet Union and to the administration by Poland of former German territories lying generally east of the Oder-Neisse line.

ALLIED CONTROL COUNCIL. By virtue of its unconditional surrender May 8, 1945, Germany as a sovereign nation ceased to exist. The basic policy for the Allied control of Germany is set forth in the Berlin Declaration issued at Potsdam August 2, 1945, by Generalissimo Stalin, President Truman, and Prime Minister Attlee. The plenipotentiary authority charged with the implementation of this policy and the de facto government of Germany is the Allied Control Council for Germany—a quadripartite body made up of the Military Governors of the four occupation zones into which Germany is divided. Each of the members acts as chairman of the meetings in rotation for one month; all of its decisions must be unanimous. The Coordinating Committee—made up of the deputy Military Governors of the four zones—gives preliminary approval of common laws prior to submission to the Control Council. Under the Coordinating Committee are 11 quadripartite Directorates dealing with the following fields—Political, Legal, Economic, Finance, Military, Naval, Reparations, Deliveries and Restitutions, Transport, Manpower, Internal Affairs and Communications, and Prisoners of War and Displaced Persons. The Allied Secretariat, another quadripartite body, provides an office operating staff for administrative purposes.

ZONES OF OCCUPATION. For purposes of control, Germany is divided into four national occupation zones, each headed by a military governor, who is assisted by appropriate supervisory and operating staffs. In addition, the city of Berlin, the headquarters of the Allied Control Council, is divided into four national zones. The U. S. zone (43,136 square miles; population 17,800,000) comprises Bavaria and west central Germany. It has a well-balanced economy with both agriculture and industry. The British zone (36,869 square miles; population 18,900,000) is made up mostly of former Prussian territory; it stretches across north Germany from Luebeck and the Baltic Sea to the Dutch and Belgian frontiers. It is more highly industrialized than any of the other zones, containing the Ruhr industrial area. The relatively small French zone (21,558 square miles; population 6,900,000) includes two trian-

gular districts separated from each other: Baden and western Württemberg in the southwest; and the Saar and Rhineland in the west. The Soviet zone (41,339 square miles; population 16,400,000) lies largely between the Oder and Elbe Rivers and includes most of Brandenburg, Mecklenburg, and the industrial Saxon and Thuringian territories.

DEFENSE. By the terms imposed on Germany, the German army, navy and air force have ceased to exist. All war equipment was delivered to the Allies or destroyed. Part of the fleet was divided among the U. S., Soviet Union and Britain early in 1946; the remainder was destroyed. Some munition plants were blown up and machinery remaining in war production plants was either destroyed or confiscated for removal from Germany as part of Germany's reparations payments. According to an official U. S. report issued May 30, 1946, Allied occupation troops in their respective zones included 315,000 American, 350,000 British, 111,000 French, and 700,000 Soviet.

EDUCATION. In pre-war Germany (1938) there were 51,118 public elementary schools with 7,596,437 pupils; 1,563 intermediate schools with 272,635 pupils; 2,282 secondary schools with 670,895 pupils; 10 technical high schools with 9,554 students; and 25 universities with 48,139 students. As a consequence of the war, practically all education had lapsed by the spring of 1945. The Allied military authorities at once took steps to rehabilitate the schools by screening teachers for political reliability, printing new textbooks and restoring or adapting buildings for school purposes. By the end of 1945 ten universities (Berlin, Jena, Göttingen, Heidelberg, Marburg, Hamburg, Kiel, Halle, Tübingen, Freiberg) had resumed at least partial instruction, but the buildings of several others were so damaged that new quarters had to be found.

AGRICULTURE. In pre-war Germany only about 28 percent of the employed population was engaged in agriculture and forestry, and the country was not self-sufficient in food. The land to the east of the Elbe was mostly divided into large estates (now being broken up), while in the west, in the south and in most parts of central Germany, the land is held mostly by peasant proprietors. About 20 percent of the total area was unfit for cultivation and of the remaining area only about half was under the plough. The great northern plain is fertile in some areas, but it consists elsewhere of thin, sandy soils fit only to grow potatoes and rye. Viticulture is possible in the river valleys of the west—the Rhine, the Moselle, the Main and the Saar; the wine yield (1938) was 53,795,390 gallons from 183,250 acres. The rich lands of central Germany, especially Saxony, produce sugar beets containing a high per-

centage of sugar. Fruit growing is possible all over the country, the southwestern and southern districts excelling in quality. Outside of a few grazing districts mixed farming is the rule. In 1937 Germany had 3,433,797 horses, 20,503,600 cattle, 4,692,300 sheep and 23,846,924 hogs. Milk production was 25,444,000 tons; butter, 416,000 tons; cheese, 143,000 tons. The table below shows crop production for two representative years for pre-1938 Germany.

MAJOR AGRICULTURAL CROPS 1933 AND 1937 (in short tons)

Crop	1933	1937
Rye	9,620,000	7,628,000
Wheat	6,177,000	5,534,000
Barley	3,823,000	4,012,000
Oats	7,663,000	6,526,000
Potatoes	48,579,000	59,083,000
Sugar beets	9,456,000	17,307,000
Fodder beets	33,858,000	44,685,000

The year 1945 was a poor harvest year because of the war, lack of agricultural manpower and bad weather conditions. Moreover, in losing the territory east of the Oder-Neisse line, Germany lost about 25 percent of its agricultural production.

INDUSTRY. Pre-war Germany was one of the world's greatest industrial nations with more than 41 per cent of her employed population engaged in industry. In the pre-war years the handicraft system was gradually replaced by large industrial establishments. Of the 1,917,793 industrial establishments listed in the 1933 census more than 90 percent were small establishments and only one percent employed over 50 persons, but over two-fifths of industrial workers were concentrated in this one percent of large industrial plants. Iron and steel production was concentrated in the Ruhr and Saarland. The industry suffered from a great lack of domestic iron ore, which was offset in 1933 by the importation of 20,600,000 tons. The electrical industry was concentrated in Berlin, the chemical industry in Bavaria, Rhinish Prussia and Prussian Saxony, and textiles in Saxony. In 1937 there were 2,600 breweries, and in 1938 8,889,900,000 cigarettes and 42,371,200,000 cigarettes were produced.

GERMAN INDUSTRIAL PRODUCTION 1933 AND 1937

Industry	1933	1937
Iron and Steel		
Pig iron	5,247,000 tons	15,960,000 tons
Raw steel	7,492,000 "	19,387,000 "
Chemicals		
Sulphuric acid	1,206,000 "	2,050,000 "
Benzine	293,000 "	1,260,000 "

Industry	1933	1937
Coal-tar distillations	208,000 tons	464,000 tons
Textiles		
Woolens	138,000 "	170,000 "
Cottons	350,000 "	369,000 "
Rayons	28,800 "	57,200 "
Artificial fibers	1,500 "	99,400 "
Motor vehicles		
Passenger cars	92,200	264,600
Trucks, buses	13,300	64,404
Food and luxuries		
Beetroot sugar	1,428,000 tons	2,210,000 tons
Beer (hecto-liters)	34,144,000	43,599,000
Miscellaneous		
Leather indus-try	126,400 tons	127,100 tons
Cement indus-try	3,820,000 "	12,605,000 "
Elec-tricity (mil-lion kwh)	25,654,000	48,969,000
Ships over 100 tons		
Number	57*	174
Ships Tonnage	73,723*	435,606

*1934.

REPARATIONS. By the Potsdam declaration and subsequent enactments, the Allies provided that Germany was to pay reparations, not in long-term payments reckoned in cash as after World War I, but in the delivery of gold, assets held abroad, and—most important—all machinery and equipment of plants making arms and munitions, ocean shipping, synthetic ammonia and gasoline, aeroplanes, aluminum, magnesium and various other equipment, all of which is to be removed from Germany by 1951. The three major purposes of reparations were to deprive Germany of all war production facilities, to assist the recovery of nations conquered and exploited by Germany, and to see that Germany could not enjoy a standard of living exceeding that of other European nations.

TRADE. Germany's pre-war trade is given in the following table.

IMPORTS, EXPORTS AND BALANCE OF TRADE 1932-1939

(in millions of dollars)

	Imports	Exports	Balance
1932	4,667	5,739	+
1933	4,204	4,871	+
1934	4,451	4,167	—
1935	4,159	4,270	+
1936	4,218	4,768	+
1937	5,468	5,911	+
1938*	6,052	5,620	—
1939†	2,755	2,814	+

*Excluding Austria and Sudetenland.

†Six months only.

In 1938 her principal customers were the Netherlands 8.7 percent, Britain 7.1 percent, Italy 6.6 percent, Sweden 5.2 percent, France 4.4 percent, her major suppliers, the U. S. 8.3 percent, Britain 5.7 percent, Italy, 5.2 percent, Sweden 4.9 percent and Argentina 4.4 percent. Her major exports were machinery 14.4 percent, ironware 9.2 percent, coal and coke 9.1 percent (39,753,000 tons), chemicals 7.3 percent, and electrical machinery 6.0 percent. Major imports were manufactured goods 7.3 percent, beverages and tobacco 6.4 percent, fruits 5.5 percent, iron ore, 5.2 percent (24,171,000 tons), and raw wool 4.9 percent (183,000 tons). The effect of reparations removals will be to reduce exports so greatly as to render difficult acquisition of foreign exchange for food and raw materials. It has been estimated, however, that by 1948 Germany may have enough exports to pay for imports to make her self-supporting at a standard not much below that of 1932. The first step toward the encouragement of inter-zonal trade was taken June 14, 1946, when an agreement was signed between the U. S. and Soviet zones for the quarterly exchange of products amounting to \$10,000,000.

COMMUNICATIONS. Germany railways and rolling stock, as well as the canal system, were largely destroyed during World War II, and the lack of adequate transportation seriously hindered German economic recovery. Less than 30 percent of her pre-war merchant marine (4,492,708 gross tons in 1939) was still afloat, and about 1,200,000 tons of this was distributed among the United Nations in the spring of 1946, leaving her with only a small merchant fleet for essential coastal shipping and fishing. Navigable waterways (7,930 miles in 1939) carried 153,219,700 tons of freight in 1938, of which the Rhine accounted for about half. The German river fleet (1938) comprised 17,757 vessels of 6,468,568 tons. Shipping on the Rhine is controlled by the Central Commission of the Rhine—an international body composed provisionally of U. S., British, French, Swiss, Dutch and Belgian repre-

sentatives—which was reconvened in October, 1945.

Railway mileage (1938) totaled 42,299, carrying 571,829,148 tons of freight. Highway mileage was 262,874 in 1939, including several large express highways (*Autobahnen*). Telephones (1939) numbered 4,226,504 and radio sets, 16,000,000.

FINANCE. The monetary unit is the German mark, nominally equivalent to 40.3325 U. S. cents, but severely reduced in value by inflationary printing of new currency. The exchange value of the mark has been pegged at 10 U. S. cents by U. S. occupation authorities. The Allies seized or compelled the delivery of all monetary gold and paper money in the banks. In January, 1945, the reich debt was 315,000,000,000 marks; the note circulation had risen to 47,000,000,000 marks, as compared with 3,000,000,000 marks in 1939.

NATURAL FEATURES AND RESOURCES. Germany lies in north central Europe, bounded on the west by the Netherlands, Belgium and France; on the south by Switzerland, Austria and Czechoslovakia; on the east by Poland; and on the north by the Baltic Sea, Denmark and the North Sea. The northern plain, the central hill country and the southern mountain district constitute the main physical divisions. The Bavarian plateau in the southwest averages 1600 feet above sea level but to the west, in the Black Forest, it reaches 9,738 feet in the Zugspitze, the highest point in Germany. Other mountain ranges are the Böhmerwald, the Erzgebirge and the Riesengebirge on the Czechoslovak border and the Harz Mountains in central Germany.

Germany contains several important navigable rivers. In the south the Danube, rising in the Black Forest, flows east across Bavaria into Austria. The other important rivers flow north. The Rhine, which rises in Switzerland and flows across the Netherlands in two channels to the North Sea, is navigable by smaller ocean-going vessels as far as Cologne. The Rhine and the Elbe, which empties into the North Sea, and the Oder, emptying into the Baltic, are all navigable within Germany for ships of at least 400 tons. The Weser, flowing into the North Sea, and the Main and Moselle, both tributaries of the Rhine, are also important.

The climate of Germany is intermediate between the oceanic climate of western Europe and the continental climate in the east. The generally equable climate of the north grades into pronounced extremes toward the eastern border where the winters are long and cold and the summers short and hot. The sheltered mountain valleys of the south enjoy a more temperate climate, especially the valley of the Rhine above Mainz. Rainfall is heaviest in

the south and west (over 30 inches) but all of Germany is well watered.

Aside from rich deposits of coal and potash, Germany's mineral wealth is no considerable. The Ruhr, Krefeld and Aachen districts of western Germany (mostly in the British zone) constitute one of the world's greatest coal mining regions with prewar reserves estimated at 65,520,000,000 tons. Production in this area (about 78 percent of total prewar production) is handicapped by the prevalence of thin seams, but distribution is favored by easily accessible natural waterways and efficient canals. Most of the Silesian reserves, estimated at 5,240,000,000 tons, are in the area under de facto Polish administration. Of Germany's total coal production in 1937, about 10 percent was used in private house consumption; another 10 percent was used by railroads and ships; 8 percent furnished energy in electric power plants; 28 percent was exported; and 34 percent was used for coking and distillation. In 1946 most of the coal produced was being used for the needs of the Allied occupation troops and for export to countries of western Europe. Valuable lignite deposits are located in the lower and middle Rhine districts and in Brunswick, Thuringia and Saxony. Potash reserves, estimated at 15,300,000,000 tons, are located in the Harz, Saale and Halberstadt districts and in Saxony. Many of the iron ore deposits consist of low grade ores, exploited at high cost by the Nazi regime. The table below gives production of major minerals for two representative years prior to any important territorial accretions.

MAJOR MINERALS 1933 AND 1937

(in short tons)

Mineral	1933	1937
Coal	120,737,785	203,374,300
Lignite	139,723,785	203,594,800
Iron ore	2,857,162	10,793,700
Lead	100,309	174,700
Zinc	178,573	214,100
Potash	8,116,014	15,039,200

Slightly over a quarter (27.5 percent) of prewar Germany was covered by forests which yielded timber (1,193,462.652 cubic feet in 1935) as well as material for paper, wood-fibre, cellulose and other products. Despite a highly advanced system of afforestation, Germany's prewar wood supply was insufficient for her needs. Areas especially rich in woodland include some between the Oder basin and the Elbe basin, near the upper Spree, the Harz and Thuringer Wald, the hills in the great bend of the Main above Frankfurt, the Fichtelgebirge, the Odenwalde and the Schwarzwald. Northwest Germany has almost no wooded areas.

The fisheries are an essential part of the German economy. In addition to the fish

eries in the Baltic and North Seas, the Germans carried on considerable ocean fishing prior to World War II. The catch (1937) amounted to 740,205 tons (excluding plaice, whales and whale oil) valued at \$41,256,-139. The most important fish were herring (203,430 tons), cod (139,092 tons), redfish (59,670 tons) and coalfish (67,624 tons). In 1938 Germany's whaling fleet caught 5,066 whales. The three floating whale factories remaining to Germany at the close of World War II were divided among the Soviet Union, Norway and Britain.

Greece (Kingdom)

(Hellas)

Area: 50,269 square miles.

Population (census 1940): 7,336,000.

Density per square mile: 145.9.

Sovereign: King George II.

Premier: Konstantinos Tsaldaris.

Principal cities (est. 1940): Athens (Athenai), 392,781 (capital); Piraeus (Peiraeus), 284,079 (port of Athens); Salonika (Thessalonike), 236,524 (seaport); Patrai (Patras), 61,278 (seaport); Kavalla, 49,980 (seaport; tobacco).

Monetary unit: Drachma.

Racial stock (1928): Greek, 92.8%; Turkish, 3.8%; Macedonian, 1.3%; Spanish, 1%; Others, 1.1%.

Languages: See Racial stock.

Religions (1928): Greek Orthodox, 96%; Mohammedan, 2%; Jewish, 1.1%; Others, .9%.

Rugged, mountainous Greece—ancient cradle of much that is dear to Western civilization—suffered cruelly in World War II and emerged as a land ripped by civil war between its right and left political elements. Greece, about the size of North Carolina, was invaded by the Italians in 1940. By April, 1941 the Greeks not only had driven the Italians out of Greece but were chasing them westward through Albania. The Germans came to Mussolini's rescue, invaded Greece from Bulgaria, and took Athens on April 27, 1941. Starvation and harsh persecution of the Greeks were common during the occupation. After liberation, Greece became a land of conflict with armed bands of Royalists and Communists terrorizing the nation.

Ancient Greece, with a recorded history going back to 776 B. C., reached the peak of its glory in the 5th century, B. C., and by the middle of the 2d century, B. C., had declined to the status of a Roman province. From 395 A. D. to 1204, it remained within the Eastern Roman Empire, until Constantinople fell to the Crusaders. In 1453, the Turks took Constantinople and by 1460 Greece was a Turkish province. The insurrection made famous by the poet Lord Byron broke out in 1821, and in 1827 Greece set up independently, with sovereignty guaranteed by Britain, France and Russia. Prince Otto of Bavaria was recog-

nized as king five years later, but he was ousted by revolt in 1862. Prince William of Denmark, as George I, succeeded him.

Up to this time Greece consisted only of the Peloponnesus and the lower part of the peninsula. Britain gave Greece the Ionian Islands in 1864, and Thessaly was added in 1881. Greek success in the Balkan Wars of 1912-13 brought the addition of Macedonia, Epirus, Crete and many Aegean Islands. In World War I, Greece kept a precarious neutrality until June, 1917 when King Constantine was forced to abdicate in favor of his second son, Alexander. Greece then entered the war on the allied side. After the war was over, Greek troops occupied Thrace and part of Asia Minor until Turkey routed them in 1922. Greece was proclaimed a republic on March 24, 1924, and there followed strife and dissension between Royalists and Republicans, although fair order was maintained during the premiership of Venizelos from 1928 to 1933. On Nov. 23, 1935, the people voted for the return of King George II who had abdicated in 1923 after a short rule. In April, 1936 General John Metaxas became premier and by August he had abolished parliament and set up a dictatorship.

Soon after, came the Italian and the German invasions of World War II. The government, which had fled the country, returned on Oct. 17, 1944 following Greece's liberation. In less than two months, all the EAM (National Liberation Front) ministers, decided leftists, resigned from the government, setting up a crisis which brought on months of fighting between British troops and the leftist resistance forces.

A peace was not concluded until Feb. 12, 1945. Three short-lived premierships followed until the elections in March 1946 gave a majority of Assembly seats to the Populist (Royalist) Party. Its leader, Konstantinos Tsaldaris, became premier on April 18, 1946. However, all the leftist groups boycotted the March elections and on into 1946, the peace of the country was wrecked by the depredations of armed bands of Communists and Royalists.

The sovereign King George II was born on July 20, 1890. He married Elizabeth, elder daughter of King Ferdinand of Rumania, on Feb. 27, 1921, and was divorced from her on July 7, 1935. The king has one brother and three sisters. The brother, Prince Paul, born Dec. 14, 1901, was married in 1938 to Princess Frederika Luise of Brunswick. They have three children: Princess Sophia, born in 1938; Prince Constantine, 1940; and Princess Irene, 1942.

On Dec. 30, 1944, King George set up a regency to represent him until the people decided by plebiscite whether they wanted a republic or monarchy. The Assembly elected in March 1946 was assigned to revise the 1911 constitution. Meanwhile, executive power vested in the regent was ex-

exercised through a cabinet of ministers headed by a premier.

On September 1, 1946, King George II scored an easy victory in a plebiscite on the return of the monarchy, winning 70 percent of the total vote. He returned from his exile in London on September 28.

Military service in 1940 was compulsory; the initial training period was 2 years. The army in 1940 had 320,000 active troops and 275,000 reserves. Military and naval aviation was controlled by the air ministry. Air force personnel in 1940 totaled 1,660, with 4500 reserves and 119 planes. The navy on Dec. 31, 1945, had one cruiser, 15 destroyers, 5 submarines, 4 corvettes and other vessels, all of which served with allied naval forces in World War II.

Education is compulsory for all children between the ages of 7 and 12. In 1938 Greece had 743 kindergartens with 38,338 pupils, 8,339 primary schools with 985,018 pupils and 407 high schools with 92,687 pupils. There were three universities (two at Athens and one at Salonika) with 7,230 students, an institute of technology, and a school of fine arts. In addition, the Ministry of Education is responsible through the Archeological Council for the conservation and repair of ancient monuments of all periods, and the upkeep and conduct of excavations.

The predominant religion is Greek Orthodox, the religion of the state, but all faiths are tolerated. The last available statistics (1934-35) indicated an average annual birth rate of 27.6—the third highest in Europe. From 1922 to 1924, some 1,350,000 Greek refugees were repatriated from Asia Minor. Many were settled in Greek Macedonia and Greek Thrace from which large numbers of Turks were removed to Anatolia.

AGRICULTURE. About three-quarters of the population is in agricultural pursuits but only one-fifth of the land is arable. The total area under cultivation in 1938 was 6,023,882 acres. The greater part of the cultivated area is devoted to cereals. Considerable areas are also taken up by olive trees and vines, and also the two valuable products, tobacco and currants, which are major export items. Cotton and rice are cultivated on a small scale. Olive oil production in 1938 from 380,000 acres was 102,805 metric tons. The principal fruits are oranges, lemons, figs, mandarins, apples, pears, and grapes. There were 8,138,772 sheep, 4,356,120 goats, and 976,322 cattle in 1938.

MAJOR AGRICULTURAL CROPS, 1938

Crop	Acres	Tons
Wheat	2,353,910	1,148,707
Barley	531,050	243,829
Corn	684,190	288,251
Tobacco	207,480	60,627
Vines (for wine)	396,255	424,937
Vines (for currants)	197,373	187,942

Development of large-scale Greek manufacturing is blocked by lack of native coal and by scarcity of capital. The most valuable products in 1939 were textiles, \$31,250,580; chemicals, \$25,461,819; and food items, \$20,537,407. Among other processes or manufactured products are olive oil, wine, spirits, flour, carpets, leather, cigarettes and building materials.

Exports in 1939 were valued at \$75,700,000 of which 27.5 percent went to Germany, 21.6 percent to the United States, 15.7 percent to Britain and 6.3 percent to Italy. Imports were valued at \$100,081,000 of which 29.9 percent came from Germany, 12 percent from Britain, 9.4 percent from Rumania and 1 percent from the United States. Principal exports were: horticultural products, especially tobacco and currants, 70.8 percent; oils and waxes, especially olive oil, 9 percent; mineral products, 4.8 percent; and wine, 3 percent. Chief imports were: agricultural products, especially cereals and sugar, metals and manufactures, yarns and textiles, animal and fish products, chemical and drug products.

The large prewar merchant marine comprising 589 steam and motor ships of 1,812,723 tons and 710 sailing vessels of 55,411 tons played a vital part in the national economy. World War II shipping losses amounted to 1,178,000 tons; the merchant marine on Mar. 31, 1946 totaled 1,700,000 deadweight tons. In 1938 6,943 steamers of 2,736,298 tons and 863 sailing vessels of 11,791 tons passed through the four-mile canal across the Isthmus of Corinth which separates the Peloponnesus from the rest of Greece. The chief ports are Piraeus and Salonika. The latter has two free zones one of which is Yugoslav.

Railway mileage in 1938 totaled 1,814 with a traffic of 2,115,314 tons. Highways totaled 5,148 miles.

Expenditures for the fiscal year 1939-40 were 14,653,841,014 drachmai; revenue 14,014,821,680 drachmai. The total public debt on March 31, 1940 amounted to 5,746,200,000 drachmai. Lend-lease receipts from the United States in World War II totaled \$76,838,000 to Greek forces outside Greece.

In natural features, central Greece, Epirus and western Macedonia all are largely mountainous. The main chain, the Pindus Mountains rise to 9,000 feet in places, separating Epirus from the plain of Thessaly. Greek Thrace is mostly a low land region separated from European Turkey by the lower Maritsa River. Among the many Greek islands are the Ionian group off the west coast, 752 square miles in area; the Cyclades group, 1,023 square miles; other islands in the eastern Aegean including Lesbos, Samos and Khios, 1,100 square miles; and Crete, the fourth largest Mediterranean island, 3,199 square miles.

Crete is mountainous, running 160 miles in length with width varying from thirty-five to seven miles.

The Greek climate is varied but generally similar to that of other Mediterranean countries. The maritime regions have temperate climate with short winters, and little snow or frost. In the uplands the winters are long and severe. Precipitation is heaviest in the mountains and overall, Greece experiences great extremes of heat and cold.

Greek minerals are varied but exploited only moderately. Principal ones are lignite, iron ore, iron pyrites, magnesite, chromite, lead, emery, marine salt, and the country's famous marble. Bauxite output in 1939 was 206,026 tons, and the molybdenum output in 1938 was 3,439,176 pounds. About a fifth of the country is forested, largely with pine, fir and oak. Resin and turpentine are the main forest products. The principal sea product is sponges.

Guatemala (Republic)

(República de Guatemala)

Area: 42,353 square miles.

Population (est. 1943): 3,450,372.

Density per square mile: 80.9.

President: Juan José Arévalo.

Principal cities (census 1940): Guatemala City, 163,826 (capital); Quetzaltenango, 33,538 (coffee, sugar); Puerto Barrios, 15,784 (chief Atlantic port); Zacapa, 14,443 (coffee, livestock).

Monetary unit: Quetzal.

Racial stock (1940): Indian, 55%; mixed and other, 45%.

Language: Spanish.

Religion: Roman Catholic.

Once the site of the ancient Mayan civilization, Guatemala was conquered by Spain in 1524 and for the next 300 years was the major center of Spanish government in Central America. Guatemala was one of the founders in 1821 of the Central American Union and, in 1839, set itself up as a republic. From 1898 to 1920 the dictator, Estrada Cabrera, ran the country, and from 1931 to 1944, General Jorge Ubico was the strong man. In July of 1944, the National Assembly elected General Federico Ponce president, but he was overthrown in October and in December Dr. Juan José Arévalo was elected.

The Constitution provides that a president shall be elected every six years by direct popular vote. A seven-member Council of State consists of four presidential appointees and three men elected by the National Assembly, the unicameral legislature whose seventy-nine members are popularly elected for four-year terms.

Each of the twenty-two regional departments is administered by a governor appointed by the president. The National Assembly elects Supreme Court and Regional Appeals Court judges. In 1944, Guatemala had an army of 20,000 and a small air force. Guatemalan lend-lease military receipts from the United States (1941-45) totaled \$21,089,000, an amount exceeded in Latin America only by Brazil.

Education, advanced under Ubico, is free and compulsory. In 1942, a total of 152,274 pupils attended 2,784 primary schools. In 1942, twenty-eight secondary schools had enrollment of 5,600. There is a university and four normal schools in Guatemala City.

Most of the ruling class is drawn from the 5 percent of the population that is white. More than 55 percent is Indian, and the rest is mixed white, Indian and Negro. Spanish is the official language, but at least eighteen Indian dialects are spoken. The Indians, the chief labor supply, are handled in feudal fashion by the coffee planters.

Agriculture engages 90 percent of Guatemalans. Coffee accounts for a fifth of the cultivated land, and two-thirds of the exports, followed by bananas, sugar cane, corn, beans, wheat, cotton and tobacco. Exports in 1944 came to \$23,856,753, while imports were \$20,702,604, chiefly cotton textiles, railway material, motor vehicles, flour, gasoline and oil.

Guatemalan manufacturing is small and local. The country has 600 miles of public railway connecting the coasts, 280 miles of private railway, 4,045 miles of highways, and in 1943, a total of 2,570 autos. Puerto Barrios, on the Atlantic side, is the main port of entry, the United Fruit Co. headquarters, and is linked by rail to the capital.

Guatemala is served by several airlines. In 1941 there were 3,800 telephones, 22,000 radios, and 3,765 miles of telegraph lines. The nation has six banks including the Central Bank of Guatemala, the only bank of issue.

Most of Guatemala is mountainous with many volcanic peaks, including Tajumulco, 13,821 feet high and the loftiest in Central America. The northern part is the great plain of Peten, largely uncultivated and geographically part of the Yucatan peninsula. The narrow Pacific slope, well watered and fertile, is the most densely populated and the most productive part of Guatemala. The climate is hot and humid on the coasts with heavy rainfall, and temperate in the highlands. The eastern coastline is 70 miles long; the Pacific 200 miles.

Guatemala has gold, silver, lead, tin, copper, mercury, coal, antimony, salt, chromite and sulfur, but it is uncertain whether they are in quantity to repay

exploitation. The country's forests, mostly in the Peten region, yield chicle for chewing gum, a small amount of rubber, and dyewoods and cabinet woods, such as cedar, mahogany and logwood.

Haiti (Republic)

(Republique d'Haiti)

Area: 10,748 square miles.

Population (estimate 1943): 3,500,000.

Density per square mile: 325.7.

President: Dumarsais Estimé.

Principal cities (est.): Port-au-Prince, 125,000 (capital, chief port); Gonaïves, 20,000 (farming district); Cap-Haïtien, 15,000 (seaport); Aux Cayes, 15,000 (seaport, coffee).

Monetary unit: Gourde.

Racial stock: Negro, 90%; Mulatto, 10%.

Language: French.

Religion: Roman Catholic.

Haiti, the only Negro republic in the Western hemisphere, occupies the western third of the island of Santo Domingo which was discovered by Columbus in 1492. Its political past is stormy and, today, it is the smallest and most thickly populated of the American republics, a nation beset by illiteracy, poverty and unemployment.

After successive Spanish and French domination, Haiti became a kingdom in 1800 under Toussaint L'Ouverture, a Negro leader. In 1822, two years after the kingdom fell, Haiti took over all of Santo Domingo and carried on until 1844 when the eastern two-thirds of the island revolted and established the Dominican Republic. Today the island is the only one in the world containing two sovereign nations.

Decades filled with revolution, corruption and disease came to a bloody climax in 1911-15 when Haiti had seven presidents in four years. After the assassination of the last one, United States Marines moved in. By a 1916 treaty the United States agreed to help administer the country until the Haitians proved capable of orderly self-government. The last Marines left in 1934, but a U. S. fiscal expert continued to supervise customs until 1941. On January 11, 1946, President Elie Lescot was driven from the country by revolution, and a three-man military junta took over until the election of Estimé in August.

Normally the president is elected for seven years by two-thirds vote of the National Assembly. That body consists of a 37-member Chamber of Deputies, elected for four years by popular vote; and a 21-member Senate, of which eleven members are elected by the Chamber of Deputies, and ten are appointed by the president. Haiti is divided into five administrative departments. All judges are named by the

president. The Garde d'Haiti, about 4,500 strong, serves as army and police force.

Most Haitians are descended from African slaves. Their illiteracy rate runs from 80 to 90 percent. Although 1941 figures showed 90,700 enrollment in primary and secondary schools, actual attendance is much less than that. The mulattoes—lightened by the blood of the early French settlers—dominate the political and social life of the nation. Many of them are Paris educated. They own the best lands while the mass of poor peasants struggle on small farm plots. While the ruling classes speak pure French, most of the people speak the patois of Creole French, and many of them still practice the strange folk religion of voodoo.

Haiti is predominantly agricultural. Coffee, which makes up more than 40 percent of Haitian exports, is the principal crop followed by sisal, sugar cane, cotton, bananas and cacao. Manufacturing is almost entirely for local consumption, but in 1938 there were four sisal factories and two sugar refineries.

Exports for the year ending September 30, 1945, totaled 85,561,000 gourdes, 78 percent to the United States, 14 percent to Britain. Imports totaled 65,770,000 gourdes, 84 percent from the United States, 4 percent from Britain. After coffee, exports included cacao, logwood, cotton, sisal, raw sugar, molasses, rice and bananas.

An energetic aid to Haitian economy has been the Société Haitiano-Américaine de Développement Agricole, a corporation founded in 1941 with American capital, to help promote Haitian industry. Known as SHADA, for its initials, the corporation was employing nearly 100,000 Haitians in 1944. Development of the rubber industry, using the fluid from the cryptostegia vine, is the principal goal and some production has already resulted.

In 1943 Haiti had 1,792 miles of improved road, 26,832 miles of unimproved road, and 143 miles of railway, of which fifty-five miles were owned by the Haitian American Sugar Company. Communications facilities include 1,500 miles of telegraph wire (1936), four radio stations (1938), 2,900 telephones (1942) and 3,000 radio sets (1941).

More than 75 percent of Haitian revenue is derived from customs paid in American currency on exports and imports. Revenue for the 1944-45 fiscal year was 41,890,000 gourdes; expenditure, 42,516,000 gourdes. The public debt was 52,936,000 gourdes.

Haiti, about the size of Maryland, is two-thirds mountainous, with the remainder marked by great valleys, extensive plateaus and small plains. The most densely populated and productive part is the Cul de Sac

Plain, near Port-au-Prince. Rivers are swift and generally not navigable. The climate is hot on the coast, temperate in the mountains, with hurricanes frequent in the May-to-October rainy season. Minerals, relatively unexploited, include gold, silver, copper, iron, antimony, tin, coal, nickel, and gypsum. In 1943 a sizeable bauxite deposit was found and signed over for U. S. development. Inland in Haiti are forests of mahogany, pine, *lignum vitae*, and other commercial woods.

Honduras (Republic)

(República de Honduras)

Area: 59,145 square miles.
 Population (census 1945): 1,201,310.
 Density per square mile: 20.3.
 President: Dr. Tiburcio Carias Andino.
 Principal cities (census 1945): Tegucigalpa, 55,715 (capital); San Pedro Sula, 22,116 (bananas, sugar); La Ceiba, 12,185 (seaport, bananas); Tela, 8,969 (seaport, bananas).
 Monetary unit: Lempira.
 Racial stock (1940): Mestizo, 86%; Indian, 10%; Negro, 2%; White, 2%.
 Language: Spanish.
 Religion: Roman Catholic.

Columbus discovered Honduras in 1502 and it was a Spanish colony, part of Guatemala, until 1821, the year of the general Central American revolt against Spain. Honduras declared its independence in 1838, and has been troubled by revolution and war ever since. American Marines intervened in 1903 and 1923. In 1931, 1932 and 1937, major revolutions were crushed by force. The Nicaraguan-Honduras boundary dispute of 1937 almost caused war and in 1945 the country was invaded from Guatemala by a group of Honduran exiles, who were suppressed.

Legislative power is held by the unicameral Congress of Deputies, whose members are elected for six years. The president also is elected for six years and is not supposed to succeed himself, but Congress twice extended the term of Dr. Carias who will be president until 1949. Honduras is divided into seventeen departments and one territory, the Bay Islands off the east coast, each with a governor appointed by the president. The five judges of the Supreme Court serve for six years. The Washington Convention limits the Honduran army to 2,500 men. In 1940 it was 2,325 strong with active reserves of 2,600. Service is compulsory. The government has established a school of military aviation to train an air force that now has twenty-three planes.

Education is free and supposedly compulsory, but less than half the children go to school. The government is trying to reduce illiteracy, estimated at 70 percent. In

1942 there were 1,083 primary schools with 55,557 pupils, eighteen intermediate schools with 2,544 pupils, and the National University had an enrollment of 378 students.

Most of the population is of mixed Spanish-Indian blood but the ruling class is of nearly pure Spanish descent. Except among isolated Indian tribes, Spanish is the common language. Most of the Negroes are British subjects imported for plantation work.

Honduran economy depends upon the banana, which makes up 50 percent of the nation's exports. The biggest banana plantations are along the northern coast. Other crops are corn, coffee, rice, henequen, tobacco and coconuts. Honduras also is an important source of sarsaparilla. Cattle raising and dairy farming flourish on rich pasture lands. Manufacturing is small and local. In 1943-44, Honduras exported \$9,462,532 worth of products, and received imports of \$12,227,944. The United States supplied 64 percent of the imports, and took 85 percent of the exports which, after bananas, included gold, silver, coffee, livestock and coconuts.

Honduras' railroads—900 miles of track in 1942—are all owned by fruit companies and used to transport bananas. Since the country is mountainous and rugged, aviation has become an important means of travel. Despite its small size, the country has thirty-eight landing fields. Highway mileage in 1942 was estimated at 780 miles. Lake Yojoa and several rivers are navigable for small steam vessels. In 1940 Honduras had 1,140 miles of telegraph lines and 1,916 telephones; and in 1941, three broadcasting stations and 16,000 radio sets.

In 1943-44, Honduras showed a budget surplus (\$181,461) for the first time in several years; the external debt, largely held in England, was reduced to \$1,761,937 and the internal debt to \$4,017,192. The Banco de Honduras is the chief bank and official bank of issue.

Honduras, in the central part of Central America, has a 400-mile Caribbean coast line and a 40-mile Pacific frontage. Generally mountainous, it has fertile plateaus and river valleys and narrow coastal plains. Of numerous rivers on the east slope, the Ulua drains a third of the nation and is navigable for most of its course. The climate is oppressive in the eastern lowlands, pleasant in the interior highlands.

In 1943 Honduras mined 9,467 oz. of gold and 1,146,784 oz. of silver. Copper and iron exist in paying quantity but are undeveloped. The country is noted for rich forest resources, particularly the tropical hardwoods. In 1944 nearly a million board feet of mahogany and 245,324 lbs. of crude rubber were exported.

Hungary (Republic)

Area: 35,911 square miles (1945).

Population (est. 1938): 9,106,252.

Density per square mile: 256.3.

President: Zoltan Tildy.

Prime Minister: Ferencz Nagy.

Principal cities (est. 1943): Budapest, 1,585,678 (capital, Danube port); (census 1939) Szeged, 141,254 (textiles, wheat); Debrecen, 128,442 (livestock); Kecskemét, 83,837 (horticulture); Pécs, 73,887 (farming).

Monetary unit: Florint, replacing Pengő.

Racial stock: Magyar, German, Slovak.

Languages: See Racial stock.

Religions (1930): Roman Catholic, 64.9%; Greek Catholic, 2.3%; Helvetican Evangelical, 20.9%; Augsburg Evangelical, 6.1%; Jewish, 5.1%; Others, .7%.

Fascist-minded militarists and greed for more territory lined up Hungary with Germany and Italy just before World War II. The fruits of this alliance and the resultant defeat of Hungary caused a smashed economy, wild inflation, stabilized poverty, Russian occupation and a reparations debt of \$300,000,000. In 1946 Hungary had a long way to go before an optimist could see any hope for even a middling prosperity.

Two thousand years ago Hungary was part of the Roman provinces of Pannonia and Dacia on the empire's borders. In 894 A. D. it was invaded by the Magyars who founded a kingdom. Christianity was accepted during the reign of Stephen I (St. Stephen) from 997 to 1083. The peak of Hungary's medieval power came in 1342-82 under King Louis the Great, of Anjou, whose dominions touched the Baltic, Black and Mediterranean Seas. When the Turks smashed a Hungarian army in 1526, western and northern Hungary accepted Hapsburg rule to escape Turkish occupation. Transylvania became independent under Hungarian princes. In 1686 Hungary was reunited under Leopold I, of Austria. After the 1848 revolt against Hapsburg rule led by Louis Kossuth was put down, the dual monarchy of Austria-Hungary was set up in 1867.

With Germany, the dual monarchy was beaten in World War I and from then on Hungary underwent hard times. There was a short-lived Socialist Republic in 1918. The chaotic Communist rule of 1919 under Bela Kun ended with the Rumanians occupying Budapest on Aug. 3, 1919. When the Rumanians left, Admiral Nicholas Horthy entered the capital with a national army. The Treaty of Trianon of June 4, 1920, cost Hungary 75 percent of its land and 60 percent of its population. Meanwhile, the National Assembly restored the legal continuity of the old monarchy and on March 1, 1920, Admiral Horthy was elected regent.

Former King Karl made two unsuccessful

efforts to return to the throne in 1921. From 1920 Hungary was, in effect, ruled by its great land owners, but the turn came in 1932 with the accession as premier of General Julius Gombos, a pro-Fascist. Under Gombos and his successors, Darányi in 1936 and Imreedy in 1938, cooperation with Italy and Germany was Hungary's guiding principle. Hungary joined the Anti-Comintern Pact of Feb. 24, 1939, and signed the Three Power Pact among Germany, Italy and Japan on Nov. 20, 1940. As inducement and reward for these actions, Hungary got part of Slovakia and all of Ruthenia from Czechoslovakia in 1938 and 1939, and northern Transylvania from Rumania in 1940.

Following the German attack on Russia, Hungary also declared war on June 27, 1941, but the war was not popular and Hungarian troops were almost entirely withdrawn from the eastern front by May, 1943. On March 19, 1944, the government of premier Nicholas von Kállay was overthrown, German troops occupied the country and a pro-German Quisling government was formed under M. Sztójay. As Russian troops advanced through Transylvania, Admiral Horthy appealed for an armistice, but he was overthrown on Oct. 16 and a puppet government was set up by the Germans with Ferenc Szálasi acting regent and prime minister. This regime soon fled to the Austrian frontier. On Dec. 23 there was formed in Soviet-occupied Hungary a provisional national assembly which set up a provisional government headed by Col. Gen. Bela Miklos, former commander of the Hungarian First Army. On Jan. 20, 1945, this government signed an armistice in Moscow under which all territory acquired both before and during the war was renounced. Hungary also agreed to pay reparation amounting to \$300,000,000 of which two-thirds was to go to the Soviet Union and one-third to Czechoslovakia and Yugoslavia. In the national elections held Nov. 4, 1945, the conservative Small Landholder party won a sweeping victory and Zoltan Tildy, its leader, became premier.

On Feb. 1, 1946, the National Assembly approved a constitutional law abolishing the monarchy and establishing a republic. Up to that time, Admiral Horthy had been regent to a non-existent king. The premier Zoltan Tildy, was immediately elected president and Ferencz Nagy replaced him as premier. The Assembly, which had been elected on Nov. 4, 1945, and assigned to draw up a new constitution, had this makeup in seats: Small Landholders, 246; Social Democrats, 71; Communists, 67; Peasants, 22. The Democratic, Citizens and Radical parties were unable to win any seats.

Pending the signing of the final peace treaty, Hungary is supervised by an Allied Control Commission composed of Soviet

British and U. S. military representatives. The Soviet chairman of the commission is the commander of the Soviet occupation troops in Hungary. U. S. and British participation is for the most part nominal and the country is actually controlled by Russia.

In 1938 Hungary repudiated the military restrictions of the Treaty of Trianon and reintroduced compulsory military service for all citizens between 18 and 60. The initial training period was two years with the army and three years with the air force. In May 1940 there were 200,000 active troops and 700,000 reserves. The air force in 1940 had an active strength of 6,000. The army, which is being reorganized and re-equipped along Soviet lines, was unofficially estimated at 30,000 in July 1946. Soviet occupation troops were estimated to number 260,000 at the same time.

Education is compulsory for children between 6 and 12 and for three more years they attend continuation schools or courses, many of them specialized agricultural schools. Besides these continuation schools and a relatively large number of special schools, Hungary in 1939 had 8,103 elementary schools, with 1,104,916 pupils. In the cities there were 418 primary schools with 105,466 pupils. High schools of different kinds numbered 263, with 79,435 students. There were three universities: Budapest, Pécs and Debrecen. Budapest had an enrollment of 3,917.

The average annual birth rate (1936-38) was 20.0 and the average annual death rate was 14.3. Under laws passed in 1927-28 optional social insurance was placed under the control of the national social insurance institute which offered medical, hospital, old age and disability insurance. Insurance for farmers was obligatory. The Land Reform Act issued in March 1945 provided for the confiscation of all estates over 1500 acres. The affected land, about 9,000,000 acres, was to be divided among about 500,000 families.

Agriculture is the basis for Hungarian life, engaging more than half of the population. Of the total area 63.6 percent can be cultivated and 17.9 percent is meadowland and rough pasture. Cereals grown in the fertile plains of the Danubian basin are the chief crops. The cultivation of vines, fruit and garden produce is important; the famous Tokay wine is produced on the southern slopes of the Hedyalja in the northeast. Wine production in 1938-39 came to 96,145,590 gallons.

Horse-breeding is a traditionally important branch of farming. Hungarians have a great love for horses, and their excellent breeds were exported in large numbers before World War II. Livestock in 1939 included 989,450 horses, 2,605,490 cattle (reduced by 57 percent in 1945), 1,750,221 sheep and 4,648,463 swine.

The dominant industries are all based on agriculture with flour milling in first place followed by sugar refining, brewing and canning. The second group of industries make hardware and machinery. Pig iron production in 1938 was 334,880 metric tons; steel, 647,508 metric tons. Most of the machine work is in Budapest and Győr. Cotton leads the textile industry, especially in Budapest, which is also a center of woolen manufacturers. Hemp and flax weaving are important. Other forms of industry include lime burning, brick making, glass working in the northern highlands, cement manufacture and the refining of oil at Budapest. In 1939 there were 4,322 manufacturing establishments with 414,815 workers and an output valued at \$694,064,716. Food products were most valuable at \$151,257,621, followed by textiles, \$110,842,238; metal, \$104,070,654; machinery, \$70,170,797; and chemicals and drugs, \$42,504,035.

In 1938 exports amounted to \$103,050,000, of which 45.7 percent went to Germany, 8.5 percent to Italy, 8.1 percent to Britain, 4.1 percent to Czechoslovakia and 4 percent to Rumania. Imports in 1938 totaled \$81,000,000, of which 41.6 percent came from Germany, 9.8 percent from Rumania, 6.6 percent from Czechoslovakia, 6.3 percent from Britain and 6.3 percent from Italy. Principal exports in 1938 were wheat 13.1 percent (481,000 tons), livestock 12.3 percent, poultry 5.1 percent, electrical machinery 4.9 percent and iron (semi-manufactured) 3.4 percent. The chief imports in 1938 were wood and wood products 10.7 percent, raw metals 5.6 percent, raw cotton 5.5 percent, paper 5.2 percent, and machinery and apparatus 5.1 percent.

The focal point in the country's transportation system is the Danube River. Navigable for 423 miles in Hungary, it carried 3,081,246 tons of freight in 1938. Hungary's central position makes it the center of an important transit trade; its prewar river fleet was the largest on the Danube. Railroad mileage in 1938 totaled 5,381, about 75 percent state-owned; the system carried 29,213,007 tons of freight. Highway mileage totaled 22,165, of which 16,785 was improved. Transportation facilities suffered heavy damage in the last part of the war. Telephones in 1943 totaled 244,934.

Expenditures in 1944 were estimated at 6,147,100,000 pengős and revenues at 5,866,700,000 pengős. The last prewar budget, in 1939, balanced at \$256,821,913. The national debt on Mar. 31, 1943 totaled 4,869,000,000 pengős. The central bank of issue is the National Bank of Hungary.

Most of Hungary is a fertile, rolling plain lying east of the Danube, and drained by the Danube and the Tisza Rivers. In the extreme northwest is the Little Hungarian Plain. In that area is Balaton, 250 square miles, the largest lake of western and

central Europe, and to the west of it lies the Bakony Forest, part of an upland extension of the Alps, called the Hungarian Mittelberge. Entering Hungary in the northwest, the Danube forms part of the boundary with Czechoslovakia before turning south through the central plain. The Tisza, rising in the Carpathians, flowing south through eastern Hungary parallel to the Danube, is normally navigable up to Szolnok in east central Hungary. It joins the Danube in Yugoslavia.

Hungary's mean annual temperature ranges from 48 degrees in the north to 52 degrees in the south. Precipitation varies from 30 to 35 inches in the Bakony Forest to less than 15 inches in the east. High summer temperatures and a long autumn favor agriculture.

While Hungary is mineral-poor overall, it has an estimated 250,000,000 tons of bauxite—about 25 percent of the world's reserve. Production in 1944 was estimated at 800,000 metric tons. The coal output is of low quality and insufficient to meet domestic needs. Output in 1938 was 1,148,597 tons. Lignite production in 1938 was 9,171,136 tons. Other minerals and their 1938 production figures include iron ore, 407,779 tons; manganese, 24,494 tons; and gold, 5,655 ounces. Estimated 1944 oil output was 9,900,000 barrels.

About 11 percent of Hungary is forested but the products are of little importance. Wood and wood products rank first among the nation's imports. Valuable fisheries are in Lake Balaton and the Danube and Tisza Rivers.

Iceland (Republic)

(Island)

Area: 39,709 square miles.

Population: 121,472.

Density per square mile: 3.1.

President: Sveinn Björnsson.

Prime Minister: Ólafur Thors.

Principal city (census 1940): Reykjavik, 38,219 (capital and only large town).

Monetary unit: Króna.

Racial stock: Almost entirely Icelandic.

Language: Icelandic.

Religion: Lutheran Christian.

Iceland, in the North Atlantic on the rim of the Arctic Circle, didn't fight in World War II, but still it won and lost in the conflict. It won its complete independence from Denmark but lost its placid isolation when the United States and Great Britain moved in to prevent German seizure, and to establish air and naval bases. With that, a new era dawned for Iceland. Because of its strategic position on a great circle air route, about halfway between New York and Moscow, the coun-

try today is inevitably coveted by big powers as an airfield site. U. S. and Russian jockeying for Icelandic favor is particularly apparent.

A bleak volcanic island about the size of Kentucky, Iceland was first settled in 874, mainly by Norse and Irish, with some English and Scotch. A constitution drawn in 930 created a form of democracy and provided an Althing, or General Assembly. Today the Icelandic Althing is the oldest legislative body in the world. In 1262-64 Iceland came under Danish rule. Through five centuries of intermittent plague, earthquake, famine and volcanic eruptions, the stout Icelanders endured, and in 1874 they obtained their own constitution. In 1918 Denmark recognized Iceland as a separate state with unlimited sovereignty but still nominally under the Danish king. On June 17, 1944, after a popular referendum, the Althing proclaimed Iceland a completely independent republic.

The British occupied Iceland in 1940 immediately after the German invasion of Denmark. In 1942 the United States took over the burden of protection. Iceland refused to abandon neutrality in World War II, which cost it charter membership in the United Nations, but it was a co-operative neutral to the allies throughout. Since the war ended, the country has been apathetic toward foreign bids for air bases and other rights.

Constitutionally, the president is elected for four years by popular vote, but President Björnsson was designated in 1944 by acclamation of the Althing. Executive power resides in a Prime Minister, presently assisted by a coalition cabinet of two Conservatives, two Social-Democrats and two Communists. The Althing is composed of two 26-member houses, each with equal constitutional power. The country is divided into sixteen districts, administered by district magistrates, and eight towns separately administered by town magistrates. The judicial system is comprised of lower courts presided over by the magistrates, from whom there is appeal to the 3-judge Supreme Court in Reykjavik. Juries are never used in the trial of criminal cases. Iceland has no army, no navy and no fortifications.

Illiteracy is unknown in Iceland. Education is compulsory from seven to fourteen and mobile schools are sent traveling through the sparsely settled areas. When the University of Iceland, established in 1911, needed new buildings in 1935, the government licensed it to conduct a national lottery to raise the funds. The high number of scholarships and the low tuition makes higher education virtually free to any qualified applicant.

Iceland publishes more books, newspapers and magazines per capita than any country in the world. Its language, Ice-

landic, has no dialects and has changed little through the centuries. In addition, Danish is widely understood and spoken. The Lutheran Christian Church is state-supported but there is complete religious freedom. A system of social insurance set up in 1935 provides for accident, sickness and old-age benefits.

About six-sevenths of Iceland area is unproductive, and only one-fourth of 1 percent is under cultivation. With about 35 percent of the population engaged in farming, sheep raising is the most important branch of this industry. Hay, potatoes and turnips are the principal crops.

About one-fifth of the people are engaged in fishing, and fish and fish products make up the bulk of Iceland's exports. The annual catch averages about 350,000 tons, and the total value of the industry was estimated in 1941 at 94,500,000 kronur. In normal years many British, German, French and Norwegian fishing craft visit Iceland's fisheries which lead the world in cod, and are important for herring, plaice and halibut. In 1938 Iceland produced 2,700,000 gallons of cod and shark-liver oil.

In 1944 Iceland's exports totaled 254,000,000, and the nation had a favorable trade balance of almost 13,000,000 kronur. Great Britain, Canada and the United States take most of the exports, although Germany and Scandinavia were important customers before World War II. Along with fish, some mutton, hides, skins and wool are exported.

Iceland has no railways. Before the war it had 2,758 miles of highways, of which 1,748 were improved, but military occupation brought new construction, much of it still unrevealed. In rural districts, most transportation is by horse-drawn cart. In 1943 the merchant marine totaled 443 vessels of 39,315 gross tons. In the same year the public debt was 65,746,000 kronur. Expenditures in 1945 were estimated at 100,211,675 kronur, against revenue of 108,177,878 kronur.

Iceland, with maximum dimensions of 298 by 194 miles, is mostly tableland, high, rugged, barren and composed of volcanic rock. It is one of the world's most volcanic regions. Mt. Hekla (5,108 ft.), near the southern coast, is the most notable of its 107 known volcanoes, many of which are still active and causing frequent earthquakes. Small fresh water lakes are found throughout the island and there are many natural oddities including hot springs, geysers, sulphur beds, canyons, waterfalls and swift rivers. More than 13 percent of the area is covered by snowfields and glaciers, and most of the people live in the 7 percent of the island comprised of fertile coastlands. One-third of the much-indented, 3,730-mile coast line belongs to a

peninsula to the northwest, joined to the mainland by an isthmus four miles wide.

The Gulf Stream modifies Iceland's climate to make it much like that of southern Canada, though with longer winters and shorter summers. Vegetation is of the Arctic type, mostly stunted. Except for peat and fisheries, Iceland has no natural resources.

Indo-Chinese Union

Area: 286,119 square miles.

Population (est. 1940): 23,700,000.

Density per square mile: 82.8.

Governor General: Admiral Thierry d'Argenlieu.

Principal cities (census 1936): Hanoi, 149,000 (capital); Cholon, 145,000 (commercial center); Saigon, 111,000 (chief port; rice); Pnom Penh, 103,000 (capital, Cambodia).

Monetary unit: Piaster.

Racial stock (1936): Native, 97.9%; Chinese, 1.4%; European, .2%.

Languages: Annamese, Cambodian, French.

Religions: Buddhism, Christianity (4%).

The Indo-Chinese Union, at the southeast corner of Asia, first met the West in the 16th century when Portuguese traders and missionaries arrived. In the 19th century France received preferential treatment for helping the emperor of Annam recover his throne. Over the last half of the 19th century, through a series of arrangements, France gradually extended influence over the whole area as it exists today.

After France fell in 1940, Vichy authorized Japanese troops to enter and the country became one of the springboards for the Japanese campaign against Singapore. When, in March of 1945, the Japanese seized control of the whole country, Annam, Cambodia and Luang Prabang declared their independence. After the Japanese surrender, British and Chinese troops occupied Indo-China in the face of a growing native nationalist movement, and restored conditions for the French authorities who took over on Jan. 1, 1946.

Until the beginning of World War II, Indo-China was an administrative federation of one colony—Cochin China; four protectorates—Annam, Tongking, Cambodia and Laos; and a special territory—Kwangchowan. These had various degrees of native rule but the real administrator of each unit was the French chief resident.

Early in 1945, France announced intention to organize the area into five states constituting a federal union, with the components enjoying limited self-government under a French governor general. Under this plan, Cambodia received internal autonomy on Jan. 4, 1946. The Republic of Viet Nam—made of Annam,

Tongking and Cochin China—was recognized as a free state on March 7, 1946.

In 1939 there were thirty-nine elementary and three high schools for French children with attendance of over 8,000. For natives there were 7,141 primary schools with 519,000 pupils, nineteen middle schools with 5,640 pupils, and four high schools with 550 pupils. Attendance at the five professional schools and the University of Hanoi was mostly native.

The Annamese, strongly influenced by contact with China, make up 80 percent of the union's population. Next in importance are the Cambodians, about 3,000,000 strong. There are several other racial groups, some very primitive. The Chinese, concentrated in the cities, are the merchant class and own 90 percent of the rice mills. Most of the population live on the plains near the sea.

Rice grows on five-sixths of the cultivated land, employs and feeds most of the population, and is the leading export and chief source of wealth. Production, centered in Cochin China, averages up to 4,500,000 tons. Exports in 1940 were 1,767,000 tons.

The other important export crops are corn and rubber. Other crops include sugar, copper, cotton, tobacco, tea, coffee, groundnuts, sweet potatoes and beans. The livestock industry is of importance in Laos, Annam and Cambodia. Livestock (1936) included 1,875,200 water buffaloes, 3,514,200 swine, 2,314,085 cattle, 79,240 horses, and mules and 300 elephants.

The Union is largely an exporter of raw materials. Its factories are small and process goods for local consumption or agricultural and forest products for export. Most important are the rice and saw mills. There are also cotton and silk textile factories, sugar refineries, match and paper factories.

Exports in 1939 totaled \$87,742,000. Imports were \$60,097,000. Chief exports were rice, rubber, corn, coal, hides and skins, and tin. Imports included mineral manufactures, corn, petroleum products, silk cloth, cotton, and wool.

The principal ports are Saigon, the largest, and Tourane and Haiphong. Indo-China has several thousand miles of waterways, including the Mekong which is navigable for two-thirds of its course. In 1939 there were 2,093 miles of railways, 75 percent state-owned. An excellent highway system includes 5,563 miles of improved road, and 11,477 miles of local road.

Extending about a thousand miles from north to south, Indo-China has two great delta regions—the Mekong in the south and the Song-koi in the north. These are separated by the Annam Mountains, and to the west of them are the mountainous continental regions of Laos. The climate is

monsoonal with nearly all of the very heavy rainfall received between May and October. Laos, in the interior, is cooler and drier than most of Indo-China.

Mining is most developed in the north. Output in 1940 in metric tons included: coal, 2,100,000; tin, 1,560; tungsten, 360; and zinc, 6,800. Iron ore, gold, phosphate, manganese, bauxite and lead are mined.

Forests cover 76,570,000 acres of Indo-China. The high mountain ranges of the north supply valuable tropical hardwood, bamboo, lacs and vegetable oil. Laos has rich teak forests, from which logs are floated down the Mekong to Saigon. Indo-China's fishing industry provides a major staple food to go with rice.

Iran (Kingdom)

Area: 634,413 square miles.

Population (est. 1940): 17,000,000.

Density per square mile: 26.7.

Ruler: Shah Mohammed Riza Pahlavi.

Premier: Ahmad Ghavam.

Principal cities (est. 1944): Teheran, 800,000 (capital); (census 1940) Tabriz, 213,542 (capital, Azerbaijan); Isfahan, 204,598 (cotton, tobacco); Meshed, 176,471 (Moslem shrine); Shiraz, 129,000 (wine, sugar beets).

Monetary unit: Rial.

Racial stock: Iranian, Kurdish, Azerbaijani.

Languages: See Racial stock.

Religions: Moslem (Shiah), about 90%; Moslem (Sunni), about 5%; Armenian, Jewish, Nestorian, Parsi.

Oil-rich Iran, one-fifth the size of the United States, was formerly called Persia, and has been a bone of contention among competing big powers for many centuries. It has a key location blocking the lower land gate to Asia, and also blocking long-held Russian aspirations for a warm-water port with access to the Indian Ocean. In modern times, Iran has drawn greedy big power interest for its rich oil deposits. A backward country by western standards, Iran achieved great publicity in 1946 when its complaint to the United Nations over the prolonged stay of Russian troops in northern Iran, became the first big controversial case for the Security Council.

Iran's history is a long one of rising and falling dynasties. After periods of Assyrian, Median and Achaemenidian rule, Persia became a great empire under Cyrus the Great, reaching from the Indus to the Nile at its zenith in 525 B. C. It fell to Alexander in 330 B. C., to the Selucidae in 312 B. C., and to the Parthians in 130 B. C. A native Persian regime arose about 226 A. D., was weakened fighting the Turks, and fell to the Arabs in 637. In the 12th century the Mongols took their turn ruling Persia, and in the early 18th century, the Turks and Russians occupied it. In

modern times, Russia, Turkey, Britain and France all took keen competitive interest in the country.

An Anglo-Russian convention of 1907 divided Iran into two spheres of influence, and these two powers occupied the country during World War I, in which it was a neutral. British attempts to impose a protectorate over all of Iran were rejected in 1919. On Feb. 26, 1921, General Riza Khan Pahlavi seized the government and was elected hereditary shah in 1925. Subsequently he did much to modernize the country and abolish all extraterritorial rights held by foreign powers.

Increased pro-Axis activity led to Anglo-Russian occupation of Iran in August, of 1941, after deposition of the shah in favor of his son, Mohammed Riza Pahlavi.

In November of 1945 a Russian-inspired autonomist movement won control of Azerbaijan, Iran's northwest province, and to protect this coup, the Russians kept their troops in that area past the treaty evacuation date of March 2, 1946. It was over this that the Iranians protested to the United Nations. Finally, the Russians pulled out their troops on May 6 but not before they had forced Iran to grant them oil concessions in the north.

Shah Mohammed Riza Pahlavi, the ruler, was born Oct. 16, 1919, and married, March 15, 1939, Princess Fawzieh, eldest sister of King Farouk of Egypt. Offspring: one daughter.

Iran is a constitutional monarchy and the shah has the usual powers of the head of a parliamentary state. Executive power is exercised by cabinet headed by the prime minister, appointed by the shah and responsible to the Majlis (parliament). The country is divided into 10 ustsans headed by governors-general appointed by the national government.

Military service is compulsory; the initial training period is 2 years. The army was modernized and reorganized by Riza Shah Pahlavi. In 1940 it consisted of about 400,000 men. The air force has several hundred planes, and the navy, several small craft in the Persian Gulf. Some of the ships were sunk during the invasion of Southern Iran by British troops in 1941. There is also an American-trained gendarmery of about 10,000.

Education has made good progress in the last twenty years, supplanting the old and essentially religious system. In 1938 there were 18,381 schools with attendance of 457,236. A university was opened at Teheran in 1934. The illiteracy rate is still high, though decreasing.

Most of the population is Moslem of the Shiah sect. The Kurds, in the central region, are of the Sunni sect.

Iran is predominantly agricultural. Large estates are numerous and irrigation

is common, especially on the central plateau. The principal crops are wheat (estimated production 1943: 1,267,645 tons) and barley (582,014 tons). Rice production, confined largely to the Caspian provinces, was estimated at 340,713 tons in 1943. Other important crops include fruit, especially grapes, dates and apricots; tobacco, cotton, sesame, sugar beets and corn. There are extensive grazing lands. Live stock estimates in 1938 included 13,711,160 sheep, 6,939,395 goats, 2,914,150 cattle, 1,458,490 mules and asses and 305,330 horses. Wool production in 1943 was estimated at 13,200 tons.

While Iran must still import many manufactured necessities, several new factories were established by the government after 1925. These included 7 sugar beet plants (1945 output: 28,600 tons), rice mills, oil mills, several textile factories (in addition to 28 private ones), a cement factory, copper smelter, glycerine factory and small arms factory. The Chalus silk mill has 370 looms producing about 1,000,000 yards a year. Both sugar and tobacco are government monopolies. The manufacturing of carpets for which Iran is famous is the most valuable industry (exports 1942: 2,657 tons).

Exports in 1943-44 totaled \$135,818,800, and imports, \$69,140,200. Principal exports (excluding petroleum which normally constitutes about 75 percent of the total) are cotton, wool, gum tragacanth, opium, rice, almonds and sheep casings. Leading imports are cotton piece goods, tea, sugar, silk tissues and drugs and chemicals.

In 1938 there were 17,000 miles of motorable roads and during World War II Allied engineer troops improved several hundred miles. Railway mileage totals about 1,072 miles. The principal line (870 miles) connects Bandar Shapur on the Persian Gulf with Bandar Shah on the Caspian. Over 5 million tons of supplies were sent to Russia by the trans-Iranian route during World War II. Navigable waterways include Lake Urmia and the Karun River. British Overseas Airways and Iranian State Airlines provide air service.

The ordinary budget (1944-45) balanced at \$137,900,000. The public debt (1944) was \$76,925,000. Incomes from various monopolies and oil royalties are important sources of revenue.

Iran is, in general, a plateau averaging 4,000 feet of elevation. In addition, there are maritime lowlands along the Persian Gulf and the Caspian Sea, and the Elzbug Mountains in the north rising to 18,500 feet at Mt. Demavend. From northwest to southeast, the country is crossed by a desert 800 miles long and from 100 to 200 miles wide. Iran's only navigable river is the Karun in the southwest. The central plateau is hot in summer, very cold in winter, but the Caspian area has a sub-

tropical climate. Rainfall is light everywhere except in the Elburz Mountains.

Considerable mineral wealth exists but oil is the only one exploited commercially. The principal field, near Shustar in the southwest, is worked by the Anglo-Iranian Oil Company whose concession began in 1901, runs to 1993. Royalties are paid to Iran on a tonnage basis. Production in 1944 was estimated at 102,000,000 barrels, about 4 percent of the world total. A Russo-Iranian Oil Company, formed in April of 1946, has rights to explore for oil in the Caspian area.

Other minerals known to exist in Iran are coal, cobalt, copper, iron ore, lead, manganese, marble, nickel, gold, silver, tin and mercury.

The main forest belt on the northern Elburz slope supplies railroad ties, charcoal and firewood. Gum tragacanth, a leading export, is the most valuable forest product. Valuable fisheries are worked both on the Persian Gulf and the Caspian. Exports in 1936 included caviar worth \$336,717, and dried fish worth \$474,332.

Iraq (Kingdom)

Area: 116,600 square miles.

Population (est. 1944): 4,500,000.

Density per square mile: 38.5.

Ruler: King Faisal II.

Regent: Crown Prince Abdul-Ilah.

Prime Minister: Seyyid Arshad el Umari.

Principal cities (est.): Baghdad, 400,000 (capital); Mosul, 260,000 (farming; oil); Basra, 180,000 (chief port); Karbala, 65,000 (Shiah shrine).

Monetary unit: Dinar.

Racial stock (est.): Arab, 75%; Kurdish, 15%; Iranian, 3.75%; Others, 6.25%.

Language: Arabic.

Religions: Moslem (Shiah), 53%; Moslem (Sunni), 35%, Christian, 2.8%; Jewish, 2.5%.

HISTORY. Iraq, a triangle of mountains, desert and fertile river valley, just west of Iran, just south of Turkey, is less than half the size of Texas. From earliest times it has been known as Mesopotamia—the land between the rivers—for it embraces a large part of the alluvial plains of the Tigris and Euphrates.

A settled civilization existed in Iraq in 4000 B. C. In 2100 B. C. it was the center of the ancient Babylonian and Assyrian empires. It was conquered by Cyrus the Great of Persia in 538 B. C., and by Alexander in 331 B. C. After an Arab conquest in 637 A. D., Baghdad was made the capital, the seat of the ruling caliphate. The country was cruelly pillaged by the Mongols in 1258 and during the 16th and 18th centuries was the object of repeated Turkish-Persian competition.

Nominal Turkish suzerainty imposed on Iraq in 1638 was replaced by direct Turkish rule in 1831. In World War I an Anglo-Indian force occupied most of the country and Britain was given a mandate over Iraq on April 25, 1920. The British recognized it as a kingdom in 1922 and abolished the mandate in 1930 when Iraq was admitted to the League of Nations. In World War II Iraq generally adhered to its 1930 treaty of alliance with Britain, but in 1941 British troops were employed to put down a pro-Axis revolt led by Rashid Ali. Iraq became a charter member of the Arab League in March of 1945.

GOVERNMENT. King Faisal II, born on May 2, 1935, succeeded his father, Ghazi I, who was killed in an accident on April 4, 1939. The king's uncle, Emir Abdul-Ilah, is regent.

Under the 1925 constitution, Iraq is an hereditary monarchy with a two-house parliament. The twenty-member senate is named by the king for eight years; the 115-member chamber of deputies is elected for four years. Executive power is vested in a council of ministers, headed by the prime minister whom the king appoints. A British adviser is stationed in each of the fourteen provinces.

Military service is compulsory, with an initial training period of 1½ to 2 years. Army and air force strength in 1938 was 28,000. Both were trained and re-equipped by the British in World War II. The British-trained police force numbers about 17,450. The 1930 treaty gives Britain the right to keep troops in Iraq under certain conditions.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is free and nominally compulsory. Secondary education is neither free nor compulsory. In 1943-44 there were 788 state primary schools with 87,445 students, 61 private schools with 13,784 students, 45 intermediate schools with 8,933 students, and 22 secondary schools with 2,321 students. Iraq has no university.

The chief economic activity is agriculture, dependent upon irrigation and confined to the valleys of the Tigris and Euphrates. Iraq supplies about 80 percent of the world supply of dates (1943 exports: 72,327 tons). Chief among the cereal products are barley (1941: 1,047,000 tons), wheat (1941: 507,000 tons), rice, sorghum, maize, and millet. Many fruits and some tobacco and cotton are grown. Grazing is the principal occupation of the many nomadic and seminomadic tribes. Livestock estimates in 1943 included 475,000 cattle (including buffaloes), 6,000,000 sheep, 1,065,000 goats, and in 1939, 100,000 camels. Wool output averages 6,000 tons annually.

Industry is still embryonic. Of the 100 manufacturing firms the most important are those making brick and tile, woolen textiles, and cigarettes. There also are dis-

illeries, cotton ginneries, tanneries, soap, and glass factories. Tobacco factories produced about 180,000,000 cigarettes in 1941.

Exports in 1944, excluding oil, amounted to \$33,651,536. Imports were \$58,480,321. Principal exports are dates, barley, wool, hides and skins, and cotton; imports: cotton, silk, rayon, and wool piece goods, tea, sugar, clothing, and iron and steel.

The only port for seagoing vessels is Basra, located on the Shatt al-Arab near the head of the Persian Gulf. River vessels plying the Tigris between Basra and Baghdad have tonnage of over 60,000. There are 3,500 miles of unimproved road and 70 miles of surfaced roads. Iraq State Railways, the only rail line, operate three lines totaling 947 miles including part of the so-called Berlin-to-Baghdad line. Iraq is served by British Overseas Airways and Panian State Lines. There is an airport and seaplane base at Basra.

Ordinary revenue (1944-45) was estimated at 17,712,740 dinars and ordinary expenditures, 17,810,200 dinars. The capital works budget, based on oil royalties, usually balances the ordinary budget. There is no external debt.

NATURAL FEATURES AND RESOURCES. Iraq has arid desertland west of the Euphrates, a broad central valley between the Euphrates and Tigris, and mountains to the northeast that rise to over 12,000 feet. The fertile lower valley is formed by the delta of the two rivers which join about 120 miles from the head of the Persian Gulf. The coast line on the gulf is only twenty-six miles long.

Iraq's climate, generally, runs to great extremes—long hot summers and short cold winters. The area on the Persian Gulf is one of the hottest places in the world. Rainfall is light, ranging from about 15 inches in the north to almost none on the desert. Sand and dust storms are frequent.

Oil production centers at the Baba Gurgur fields near Kirkuk, operated on behalf of an international group by the British-managed Iraq Petroleum Company. The 1944 output was 3,897,567 long tons, shipped to Haifa in Palestine and Tripoli in Lebanon. The other field is operated by the Kanaquin Oil Company, a subsidiary of the Anglo-Iranian Oil Company, and produces only for local consumption—5,505 long tons in 1944.

Principal cities (census 1936): Rome, 1,094,710 (capital); Milan, 921,515 (leading financial, industrial center); Naples, 739,349 (seaport); Turin, 608,211 (Fiat auto works); Genoa, 512,313 (chief seaport); Palermo, 339,497 (Sicilian seaport).

Monetary unit: Lira.

Racial stock: Predominantly Italian.

Religions: Roman Catholic, 99.4%; Others (Protestant, Orthodox, Jewish), .4%.

As late as 1934, Italy under the late infamous Benito Mussolini wavered on joining forces with Hitler, but then the following year it took the plunge that ended on the road to ruin. Instead of being accepted as Germany's equal, Italy became a bullied satellite. Instead of tasting victory in World War II, Italian troops and warships were routed again and again. Instead of winning territorial spoils, Italy lost its empire and finally was invaded and bombed and devastated. In all this chaos Mussolini was killed, the monarchy was dissolved, and an Italian republic was born. It was a shaky republic and, like much of Europe in the war's wake, was torn between forces of right and left.

Italy, about the size of New Mexico but long and narrow in shape, did not exist as a unified country until 1870. Until 476 A. D., when the German General Odoacer became head of the Roman Empire in the west, the history of Italy is largely the history of Rome. From 800 A. D. on for several centuries, the Holy Roman Emperors, the Popes, Normans, Lombards, Saracens and Greeks all vied and contested for control over various segments of the Italian peninsula. Numerous city states, such as Venice and Genoa, and many small principalities flourished in the late Middle Ages in a time of conspiracy and plot as one after another strove for domination of Italian land.

After the War of the Spanish Succession in 1713, Milan, Naples and Sardinia were handed over to Austria but the increasing Hapsburg influence on the peninsula was interrupted for a short time after 1800 when Italy was unified by Napoleon who crowned himself King of Italy on May 26, 1805. After the Congress of Vienna in 1815, Austria was the dominant power in Italy.

MAZZINI. The movement for national unity began in the rebellions staged in the middle of the 19th century by the "Young Italy" group headed by Giuseppe Mazzini. In 1858 Count Cavour, prime minister of King Victor Emmanuel of Sardinia, secured the aid of Napoleon III of France. After French and Sardinian forces had defeated the Austrians in 1859, Lombardy was annexed to Sardinia, and by the time the first Italian parliament opened at Turin in February 1861, all Italy was represented except Venetia, held by Austria, and Rome which was the territory of the Pope. On February 18, 1861, Victor Emmanuel was proclaimed King of Italy. In 1866

Italy (Republic)

(Repubblica d'Italia)

Area: 119,733 square miles (July 1946).

Population (est. 1943): 45,681,000.

Density per square mile: 381.5.

President: Enrico de Nicola (provisional).

Premier: Alcide de Gasperi.

Italy sided with Prussia against Austria and received Venetia; Rome was seized in 1870. Umberto I succeeded to the throne upon the death of his father January 9, 1878. In 1882 Italy entered into the Triple Alliance with Austria and Germany. Victor Emmanuel III came to the throne on the assassination of his father on July 29, 1900. After war with Turkey in 1912, Italy seized Tripoli in North Africa and the Dodecanese Islands in the Aegean Sea. Italy denounced the Triple Alliance on May 3, 1915 and declared war on Austria on May 24. By the treaty of St. Germain, on Sept. 10, 1919, Italy received the south Tirol and the Istrian Peninsula.

MARCH ON ROME. In the years right after World War I, Italy was a virtual battleground between the Socialists and Mussolini's new Fascist movement. The weak government was powerless to maintain order as the two sides fought for power and influence. Finally, on Oct. 30, 1922, the Fascists staged their March on Rome and took over the government, with Mussolini named as premier by King Victor Emmanuel III. Mussolini and his Fascist Grand Council soon made Italy into a corporate state, with Mussolini as dictator.

In 1935-36 Italy successfully invaded, conquered and annexed Ethiopia, despite the complaints of the League of Nations and economic sanctions against Italy.

On November 6, 1937, Italy joined the German-Japanese Anti-Comintern pact and on December 11 resigned from the League of Nations. The Rome-Berlin Axis was converted into an alliance on May 22, 1938. Italian troops seized Albania in April 1939. On June 10, 1940 Mussolini announced a declaration of war against Britain and France. Italian troops were able to advance only a few miles into France before the Armistice was concluded on June 24 under which Italy annexed a small strip of France. On October 28, 1940 Italian forces invaded Greece from Albania, but they were driven back by the Greeks who held a third of Albania by the time the Germans made their attack on April 6, 1941. Italy subsequently occupied parts of Yugoslavia and Greece. Following the German capitulation in North Africa and the fall of Sicily, Mussolini resigned on July 25, 1943 and Marshal Pietro Badoglio formed a new government. On September 3, 1943, the date of the invasion of the Italian mainland by Allied forces, a military armistice was signed between General Eisenhower and Badoglio, and the legislative and administrative activities of the government were made subject to the approval of an Allied Commission.

On June 9, 1944 Badoglio was succeeded as premier by Ivanoe Bonomi who formed a coalition cabinet. This government was recognized as the de facto government of Italy on October 25 but only a co-belliger-

ent, and not as an ally. On Feb. 25, 1945 was given full legislative powers and the right to resume diplomatic relations.

When German resistance crumbled in northern Italy, the partisan Committee of National Liberation (CLNAI) quickly liquidated the puppet republic formed there by Mussolini who was captured and executed on April 27, 1945. On June 12 Bonomi resigned and was succeeded on June 21 by Ferruccio Parri, underground leader in northern Italy. On June 9 an agreement was signed by the United States, Britain and Yugoslavia which provided for an Allied military government in Venezia Giulia west of a line drawn from Trieste to the Adriatic frontier, and for Yugoslav administration east of that line. Premier Parri resigned on Nov. 24 and was succeeded by Alcide de Gasperi.

GOVERNMENT. Following the liberation of Rome on June 5, 1944, King Victor Emmanuel III designated his son, Umberto, Lieutenant General of the Realm, but he remained head of the House of Savoy. The King formally abdicated May 9, 1946, and Umberto took the throne as Umberto II. In a referendum held June 2, 1946, 94% of the Italian people approved the dissolution of the monarchy and the formation of a republic. King Umberto left Italy on June 13. On June 28 the assembly elected Enrico de Nicola provisional president of the Italian republic to hold office until a general election early in 1947. The constituent assembly elected on June 2, 1946, which drafted a republican constitution, includes 207 Christian Democrats, 115 Socialists, 104 Communists, 41 National Democratic Union, 39 Qualunque, 23 Republicans, 15 National Block of Freedom Action Party and thirteen others. A five-party coalition cabinet headed by Alcide de Gasperi, a Christian Democrat, was sworn in on July 13, 1946.

Italy is divided for administration into ninety-three provinces (including Sicily and Sardinia; excluding Libya), each headed by a prefect appointed by the national government and assisted by a locally elected council. Each municipality has a mayor, also appointed by the national government; he is assisted by an elected council in municipalities which are provincial capitals or have more than 10,000 inhabitants.

DEFENSE. Military service in 1940 was compulsory and universal; the initial training period normally was eighteen months beginning at twenty-one, with service or reserve continuing until thirty-five. The normal peacetime army strength was 260,000 men plus 50,000 carabinieri (military police). When partially mobilized in 1940 the army had 2,860,000 men and troops and 4,555,000 reserves. After the armistice the army was reconstituted in 1943 and by early 1945, 6 divisions were

action against the Germans. The army and navy air forces were separate. On Dec. 31, 1945 Italy still had 5 battleships, 9 cruisers, 36 destroyers and large torpedo boats, 5 submarines and many smaller vessels.

EDUCATION. Elementary education is free and compulsory from six to fourteen. Governmental and non-governmental elementary schools in 1941-42 numbered 139,771 with 5,110,328 pupils. Governmental and non-governmental secondary schools in 1941-42 numbered 5,136, with 556,260 students. In 1942-43 there were 29 royal universities and institutes, and 6 free universities and institutes with a total of 84,853 students. The University of Rome, founded 1403) had 14,210 students in 1939; Naples (founded 1224) had 12,289 students; Milan (founded 1924), 7,913.

RELIGION. Although the country is predominantly Roman Catholic which is the state religion, religious freedom is permitted. Appointment of archbishops and of bishops is made by the Pope, and Catholic religious teaching is given in all elementary and intermediate schools. Relations with the Church are regulated by the treaty with the Holy See of Feb. 11, 1929, which established the temporal power of the Pope over the Vatican City.

AGRICULTURE. Agriculture, the most important of Italian industries, engages over a third of the population. It is extremely diversified; difference of altitude, soil and climate allow the production of all European crops from rye to rice, from apples to oranges, and from hemp to cotton. Of the total national area, 76,000,000 acres, approximately 70,548,131 acres are productive. Of this area 25 percent is devoted to cereals, 30 percent to forage and pasture, 3.5 percent to vines, and 3 percent to olive trees. Italy ranks next to France in wine production (average 1931-38, 1,024,000,000 gal.) and next to Spain in olive oil production (average 1936-38: 35,000 quintals). The silk industry is centered in northern Italy and along the eastern coast. Estimated silk cocoon production in 1938 was 19,900,000 kilograms. The Italian climate and soil are well suited for fruit growing.

Livestock and dairy farming are important in Italy. In 1937, the country produced 1,000 metric tons of cheese and 49,000 tons of butter. Of the fifty-odd varieties of Italian cheese, the best known are the hard parmesan and pecorino (the latter made from ewe's milk) and the soft brie. In 1939 Italy counted 7,876,730 cattle, 1,867,760 goats, 781,160 horses, 3,290 swine and, in 1940, 9,968,000 sheep. Before World War II the fascist government carried on a wide land reclamation program and by July 1, 1938—2,692,119 acres of land had been reclaimed, mostly in Sicily, Apulia, and the Venetian provinces.

Italy suffered in 1945 from the severe drought as well as from disorders following the end of the war. The wheat crop was the smallest since 1920, rice the smallest since 1899, and sugar 10 percent of normal. Livestock and animal products were estimated at only 60 percent of pre-war level.

The last industrial census, in 1937, showed 728,150 industrial establishments employing 4,005,790 persons. There were 1,532,625 persons employed in the 1,152 companies employing more than 250 workers. While a large proportion of small and medium sized concerns were common in industry before World War II, there was a growing tendency, fostered by the nature of the corporate state, toward industrial concentration. The textile industry is the largest and most important, with 204,000 workers in 939 factories in 1939. The textile trade supplied most of the home markets and left a large margin for export. The decline of the silk industry after World War I was offset by the rapid growth of artificial silk industry. Production of rayon increased from 24,406 kilograms in 1927 to 126,514 kilograms in 1938. The importance of the metal industries is limited by lack of coal and sufficient iron ore reserves. The production of pig iron in (1938) was 854,536 tons and of crude steel, 2,322,856 tons. The chemical industries increased greatly in importance during the interval; in 1937 there were 5,164 establishments employing 99,470 persons. The clothing industry employed 656,737 people in the period 1937 to 1940; 541,000 were employed in the food industries including the important canning and preserving industries working largely for the export market.

TRADE. The most recent complete foreign trade statistics, for 1938, placed exports at \$530,038,000 and imports at \$592,900,000. The chief exports, by percentage were: cotton tissues 6.9, artificial fibers 3.5, almonds 3.3, fresh fruit 3.1, wool tissues 2.9, lemons 2.8, automobiles 2.5 and cotton thread 2. The chief imports also by percentage were: coal 15.2 (13,134,000 tons), raw cotton 7.3, mineral oils and products 5.8, wood products 3.5, wool 3.1, copper 2.9, scrap iron and steel 2, machines and utensils 1.9, wheat 1.9, hides and skins 1.7. The chief customers, by percentage, were: Germany 18.8, Eritrea 12.7, United States 7.5, United Kingdom 5.6, Libya 5, Switzerland 4.7, Argentina 3.9 and France 3.1. The principal suppliers, on a percentage basis, were: Germany 26.7, United States 11.9, United Kingdom 6.5, Switzerland 3.3, Poland and Danzig 2.8, Argentina 2.4, India 2.3 and France 2.3.

COMMUNICATIONS. On June 30, 1939, the merchant marine consisted of 2,301 sailing vessels of 99,228 tons; 1,057 steamships of 1,600,486 tons and 293 motor ships of 378,996 tons. There are more than 150 sea-

ports of which 66 have an annual traffic exceeding 250,000 tons. The principal ports, in order of traffic in 1938, were Genoa, Trieste, Venice, Savona, Naples, and Leghorn. Coastwise traffic is particularly important because of difficult land communications. Railway mileage in 1938 was 14,184 (10,358 government-owned) with a traffic of 63,507,912 tons. Highways totaled 38,720 mi., of which 7,771 were improved. Telephones in 1942 numbered 835,721.

FINANCE. The monetary unit is the lira; official rate 100 to the U. S. dollar. Estimated revenue for the fiscal year 1946 was \$1,160,000,000; estimated expenditures, \$1,826,000,000. The national debt had risen from 105,709,000 lire on 1935 to 405,823,000,000 lire in 1943 and was placed at 1,000,000 million lire or ten billion dollars in November 1945.

NATURAL FEATURES AND RESOURCES—TOPOGRAPHY. Six hundred of boot-shaped Italy's 707 miles of length are in the long peninsula that pokes into the Mediterranean from the fertile basin of the Po River. The Apennines, branching off from the Alps between Nice and Genoa, form the peninsula's backbone, and rise to peak height of 9,500 feet at Gran Sasso d'Italia. The Alps are Italy's northern boundary.

Several islands form part of Italy. Sicily, 9,860 square miles, lies off the toe of the boot, across the Strait of Messina, with a steep and rock-bound northern coast and gentler slopes to the sea in west and south. Mt. Etna, an active volcano, rises to 10,868 feet, and most of Sicily is over 500 feet in elevation. Sixty miles southwest of Sicily lies Pantelleria, 45 square miles, and south of that are Lampedusa and Linosa. Sardinia, 9,187 square miles, just south of Corsica and 125 miles west of the nearest Italian mainland, is largely mountainous, stony and unproductive.

Italy has many northern lakes, lying below the snow-covered peaks of the Alps. The largest are Garda, 143 square miles; Maggiore, 83; and Como, 55. The Po, the principal river, rises in the Alps on Italy's western border, flows across the Lombard plain into the Adriatic. Its basin is an estimated 26,798 square miles. The Arno and Tiber Rivers, rising in the Apennines, flow westward. Elsewhere are hundreds of short streams.

In climate Italy is variable. The Italian Riviera along the Gulf of Genoa is subtropical. The winters in the high Apennines are cold and bitter. The western slope of peninsular Italy is warmer than the eastern side, and the Po basin in the north has cold winters and very hot summers. Sicily basks in the warm and equable Mediterranean climate.

Italy is the world's largest producer of mercury, an important producer of sul-

phur, but for the staples of coal, oil, and iron, Italy is forced to import. Building stone, particularly marble, is plentiful. In the south Tirol and the central Apennines Italy has good water power which developed six million horsepower in 1936.

Less than 20 percent of Italy's area is forested. Principal products in 1938 were soft timber, 68,328,545 cubic feet; hard timber, 55,864,547 cubic feet; charcoal, 642,996 tons; and acorns and cork. The fishing industry—1938 catch, 52,861 tons—does not fill domestic needs. Coral and sponges are marketed commercially.

FORMER ITALIAN COLONIAL EMPIRE

Country	Area (sq. mi.)	Population (est. 1940)
AFRICA		
Libya	679,183	888,438
Eritrea	45,754†	835,037

ASIA

Dodecanese Is.	1,035	122,000
----------------	-------	---------

*Est. 1943. †Census, 1931. ‡Excluding Ethiopian territory.

LIBYA. *Status:* Part of Metropolitan Italy except Libyan Sahara (whole area under British military government). *Capital:* Tripoli, 108,240 (1938). *Foreign trade:* (1938): exports \$5,731,900 (89.1 percent to Italy); imports \$46,400,600 (89.2 percent from Italy). *Agricultural products:* barley, olive oil, wheat, figs, date palms, tobacco. *Mineral:* Salt. *Sea products:* Sponge, tunic.

Italian Libya, lying along the north coast of Africa between Tunisia and Egypt, was a part of the Turkish dominions from the 16th century until 1911. Following the outbreak of hostilities between Italy and Turkey, Italian troops occupied Tripoli. Italian sovereignty was recognized the next year by the Treaty of Ouchy. In 1934 the area was organized into four provinces—Bengasi, Derna, Misurata and Tripoli—tania—which were incorporated in 1935 into Metropolitan Italy, and one military territory in the south, Libyan Sahara (465,362 sq. mi.). It was the scene of much desert fighting during World War II, since the fall of Tripoli on Jan. 23, 1942, has been under British military occupation and government.

The area has three natural divisions—the coast inland—the Mediterranean coast, the only region suitable for agriculture; the sub-desert; and the desert. About 10 percent of the population are Italian; the remainder natives, mostly Moslem. Senussi sect, which opposed Italian rule in Cyrenaica during World War I, exercised strong position among the remoter tribes in the hinterland. Railroads in 1938 totaled 242 mi. and improved highways, 2,160 mi.

ITALIAN SOMALILAND. *Status:* C

(under British occupation). *Capital*: Mogadiscio (pop. 1940: 45,000). *Foreign trade* (1937): exports, 40,675,000 lire; imports, 378,817,000 lire. *Agricultural products*: Dressed skins, cattle, sugar, cotton, cottonseed oil, fruits, bananas. *Forest products*: Gum, resin, kapok. *Mineral*: Tin.

Italian Somaliland, extending along Africa's east coast from the Gulf of Aden south to Kenya, fell within the Italian sphere of influence by treaties with the Somali sultans in 1889 and by agreements with Britain in 1924, the sultan of Zanzibar in 1905, and Ethiopia in 1907. After the conquest of Ethiopia the area, together with part of Ethiopia, became a government in Italian East Africa. It was occupied in Feb. 1941 by British Imperial troops, and, reduced to its pre-1936 area, has since been under British military administration.

The overwhelming majority of the population are Somalis who belong to the Sunni sect of Islam; they are a pastoral nomadic people whose livelihood depends on cattle, sheep and camels. However, the Italians established plantations in the south, especially in the fertile Juba region. Land under cultivation (1938) was 50,000 acres. The colony was far from self-supporting, requiring heavy Italian subsidy. The only railway has been torn up by the British; highways in 1938 totaled 1,942 mi.

ERITREA. *Status*: Colony (under British occupation). *Capital*: Asmara (pop. 1939: 6,000). *Foreign trade* (1934*): exports, 1,092,000 lire; imports, 215,816,997 lire; chief exports, coffee, salt. *Agricultural products*: Coffee, barley, tobacco, sesame, hides and skins. *Minerals*: Gold, salt, potassium salts. *Sea products*: Pearls.

The first Italian inroad in Eritrea came in 1870 when the port of Assab and adjacent territory were bought from a native Italian. By a decree of Jan. 1, 1890 Italian possessions along the Red Sea were united to the colony of Eritrea. In 1936 Eritrea, the parts of Ethiopia, became a government of Italian East Africa. British and Italian troops captured Asmara, Apr. 1, 1941 and Massawa, Apr. 8; the area, reduced to its pre-1936 borders, has since been under British military occupation.

The principal native elements are the Afropolitans and Tigrés who have close ethnic, linguistic, and religious ties with peoples across the border in Ethiopia. Italians in 1944 totaled 48,718. Irrigation is essential in the low-lying coastal plains and agriculture is practiced for the most part on the interior plateau (average elevation: 6,500 ft.) where the climate is suitable for European settlement. The pastoral industry engages most of the natives. The last separate budget, in 1935-36

later statistics were incorporated in those for Italian East Africa.

required a 25 percent subsidy from Italy. Railroads total 204 mi. and highways about 2,300 mi.

DODECANESE ISLANDS. *Status*: Colony (under joint Greek-British occupation). *Capital*: Rhodes (pop. 1936, 27,466). *Foreign trade* (1938): exports, \$1,149,000 (67.8 percent to Italy); imports, \$8,281,000 (77.6 percent from Italy). *Agricultural products*: Wine, olive oil, tobacco, hides and skins. *Sea product*: Sponges.

The Dodecanese, a group of 13 islands in the Aegean Sea near the coast of Asia Minor, were part of the Ottoman Empire prior to Italian occupation in 1912. Turkey recognized full Italian sovereignty by the Treaty of Lausanne in 1924 by which Castelrosso (4 sq. mi.) was also ceded. The German garrison surrendered to an Anglo-Greek force on May 8, 1945.

Fully 85 percent of the population is Greek. The islands are of slight economic value with the exception of the sponge-fishing industry. The most important islands are Rhodes (545 sq. mi.), Cos (111 sq. mi.), Kalymnos (49 sq. mi.), and Leros (28 sq. mi.). Rhodes and Cos are very fertile. There were 382 miles of road in 1937.

SASENO. This islet, of four square miles, situated at the entrance to the Bay of Valona (Albania) was seized by Italy in Oct. 1914. It was occupied in Nov. 1944 by Albanian forces and later fortified.

Japan (Empire)

(Nippon)

Area: 147,492 square miles.

Population (est. 1945): 77,997,642.

Density per square mile: 528.8.

Supreme Commander for the Allied Powers: General of the Army Douglas MacArthur (U. S. A.).

Ruler: Emperor Hirohito.

Premier: Shigeru Yoshida.

Principal cities (census 1940): Tokyo, 6,778,804 (capital, financial, manufacturing center); Osaka, 3,252,340 (chief industrial center); Nagoya, 1,328,084 (machinery, textiles); Kyoto, 1,089,726 (manufacturing); Yokohama, 968,091 (seaport, silk export center); Kobe (seaport, shipbuilding); Hiroshima (seaport, textiles); Fukuoka, 306,673 (seaport, textiles).

Monetary unit: Yen.

Racial stock: Japanese.

Language: Japanese.

Religions (1938): Buddhism, 60%; Shintoism, 21%; Protestant (215,166); Roman Catholic (118,856).

HISTORY. Japan, the world's largest producer of natural silk, had a major share in producing the world's biggest war. From the time when the Japanese militarists seized Manchuria from China in 1931, Japan was a determined aggressor bent on

dominating as much of Asia as could be brought under control. She began the undeclared war with China in 1937, and sought to knock the United States out of the Pacific with the attack on Pearl Harbor in 1941. For many months after Pearl Harbor, the Japanese Army and Navy enjoyed spectacular success, but by the end of 1942 the tide had begun to turn. Three years later the dropping of the world's first atomic bomb in combat on Hiroshima, followed by a second one on Nagasaki, knocked Japan swiftly into a surrender that already had been long inevitable. Overnight, Japan became what it had been in the beginning—a terribly overcrowded island group a little bigger than half of Texas.

Japan's early history is indistinguishable from mythology. One legend attributes the creation of Japan to the sun goddess, from whom the later emperors were allegedly descended. The first of them was Jimmu Tenno, supposed to have taken the throne on Feb. 11, 660 B. C.

Recorded Japanese history begins with the first contact with China in the 5th century A. D. Japan was then divided into strong feudal states, all nominally under the emperor, but with real power often held by a court minister or clan. In 1185 Yoritomo, the chief of the Minamoto clan, was designated shogun (generalissimo) with the actual administration of the islands under his control. Clans came and went but a dual government system—shogun and emperor—persisted till 1867.

First contact with the West came in about 1542 when a Portuguese ship off course arrived in Japanese waters. Portuguese traders, Jesuit missionaries, Spanish, Dutch and English traders were poking around in Japan by 1613. Suspicious of Christianity and Portuguese support of a local Japanese revolt, the shoguns expelled all foreigners in 1636 except the Dutch who were restricted to Nagasaki. Western attempts to renew trading relations failed until 1853 when Commodore Perry sailed an American fleet into Tokyo Bay with a letter from President Pierce.

A U. S. commercial treaty signed in 1859 was followed by similar pacts with Britain, France, the Netherlands and Russia, and the opening to foreign residents of the ports of Yokohama, Nagasaki and Hakodate.

Now Japan quickly made the transition from a medieval to a modern power. Feudalism was abolished. Industrialization was speeded. An imperial army was established with conscription. The shogun system was abolished in 1867 by Emperor Meiji and parliamentary government was established in 1889.

In 1904-05 the new Japan won prestige by defeating Russia in the Russo-Japanese

War, gaining the territory of southern Sakhalin, and Russia's port and rail rights in Manchuria. In World War I Japan grabbed Germany's Pacific islands and leased areas in China. The Treaty of Versailles then awarded her a mandate over the islands.

At the Washington Conference of 1921 Japan agreed to respect Chinese national integrity. In 1931, in the face of an inquiry by the League of Nations, Japan invaded Manchuria and set it up the next year as a puppet state, Manchukuo, under Emperor Henry Pu Yi. From then on Japanese policy was attuned to the saber rattling of her aggressive militarists and navy men. On Nov. 25, 1936, Japan joined the Axis by signing the anti-Comintern pact. The invasion of China came the next year, and the Pearl Harbor attack was unleashed on Dec. 7, 1941.

Despite her early successes, Japan never had a chance against American power. She was reeling close to defeat when she was forced on Aug. 14, 1945, to give up. The formal surrender took place Sept. 2 aboard the battleship *Missouri* in Tokyo Bay. Southern Sakhalin and the Kurils reverted to Russia, and Formosa and Manchuria to China. The Pacific islands remained under U. S. occupation.

In a statement issued at the end of the first year of occupation (Aug. 30, 1946) General Douglas MacArthur, the occupation chief, reported that Japan's armed forces had been completely liquidated, her war-making capacity destroyed, her business monopolies broken up and democratic forms of government instituted. He indicated that approximately 4,000,000 Japanese troops abroad and 2,500,000 troops at home had been disarmed and demobilized in addition to the repatriation of 2,000,000 Japanese civilians from abroad. Also cited was an agrarian reform program which was to enable 2,000,000 tenant farmers to purchase the lands they cultivated.

GOVERNMENT. ALLIED OCCUPATION. General of the Army MacArthur was appointed Supreme Commander for the Allied Powers (SCAP) on Aug. 14, 1945. The surrender terms provide for acceptance of Japan of the provisions of the Potsdam Declaration (July 26, 1945) and that "the authority of the Emperor and the Japanese Government to rule the state shall be subject to SCAP who shall take such steps as he deems proper to effectuate the surrender terms."

The Far Eastern Commission—composed of Australian, Canadian, Chinese, British, Indian, Dutch, New Zealand, Philippine, Soviet and U. S. delegates—is empowered to formulate the policies, principles and standards by which the fulfillment of Japanese obligations under the surrender terms may be accomplished, to review direct

issued to SCAP or any action taken by SCAP within the purview of the Commission's jurisdiction. The Allied Council for Japan—composed of SCAP who is the U. S. member, a Chinese and a Soviet member and a member representing jointly the United Kingdom, Australia, New Zealand and India—is to advise and consult with SCAP in carrying out the surrender terms and policies approved by the Commission.

RULER. Emperor Hirohito, born April 29, 1901, succeeded his father, Yoshihito, Dec. 25, 1926; married, Jan. 26, 1924, to Princess Nagako, born 1903. Offspring: 2 sons, Crown Prince Akihito, born Dec. 23, 1933 and Prince Masahito, born 1935 and 5 daughters. Succession is in the male line only.

NATIONAL GOVERNMENT. By the constitution of Feb. 11, 1889, supreme executive power resided solely in the Emperor, assisted by cabinet members chosen by him and responsible to him. The latter carried on the actual administration of the government. The diet consisted of two chambers, the house of peers of about 400 members, partly hereditary, partly appointment for life, and partly elective, and the house of representatives of 466 members, elected for 4-year terms by universal suffrage. The party standing in the April 10, 1946 elections was: Liberals (conservative) 143, Progressive (ultra-conservative) 94, Socialist (reformist) 92, Independent 84, Cooperative 16, Communist 5, and others 16.

LOCAL GOVERNMENT. Japan proper (1942) is divided into 3 urban and 43 rural prefectures, each with an assembly and council and a governor appointed by and responsible to the minister of home affairs. There were also 146 cities, 1,711 towns and 9,524 villages, each with an elected assembly and a mayor.

DEFENSE. The War, Navy, and Munitions industries and the Army and Navy General Staffs have been abolished, and the army and navy almost completely demobilized. Early in 1945 the army was said to have an effective strength of 90 divisions and 1,000,000 men. The navy (Sept. 1945) included one seaworthy battleship, 3 wrecked battleships, 4 disabled aircraft carriers, 4 cruisers (only one undamaged), 38 destroyers (many damaged), 51 submarines and 98 coastal craft. Complete losses included 8 battleships, 19 aircraft carriers, 10 cruisers, and large numbers of destroyers, submarines and smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. **EDUCATION.** There were 48,637 schools of all types in 1938 with 15,638,780 pupils. There were 563 middle schools (high schools) had 1,486 students; and the 45 universities, 85 professors and 72,968 students. The best university and the one with the highest prestige is the Imperial University in Tokyo with about 8,000 students. Elementary literacy is more than 99 percent,

because a six-year elementary course is free and compulsory.

POPULATION. The population of Japan proper was approximately doubled during the period 1870-1935. The birth rate in 1938 was 26.7 and the death rate 17.44. The density of population is exceeded only by England and Wales, the Netherlands, Belgium and Java.

AGRICULTURE. Japan is a land of small rice and silk farms and, except in Hokkaido, the northernmost island, there is almost no large scale farming and animal husbandry. In 1938 there were 5,519,480 farm households cultivating about 15,000,000 acres. The average holding was less than three acres. Through double cropping wherever possible, Japanese self-sufficiency is possible, but on a very low level of subsistence. Rice, always the chief crop, came to about half of the 1939 cash crop.

Japan is the world's largest producer of natural silk, with about 30 percent of all farm households engaged in cocoon tending in 1939. Estimated output for 1945 was 120,000 bales, as compared with 536,225 bales in 1941. In 1938 Japan had 1,894,261 cattle, 1,140,479 swine, 114,000 sheep, 281,741 goats and 1,431,920 horses.

MAJOR AGRICULTURAL CROPS, 1939

Crop	Acres	Tons
Rice (rough)	7,889,180	13,475,618

Oats	335,920	226,192
Tea	99,956*	60,296

*1938.

INDUSTRY. There were 112,332 factories, employing more than five persons each in 1938, with a total of 3,604,283 workers and an output of \$5,595,458,170. The most important were: metal (\$1,333,498,370), textile (\$1,133,772,350), machinery (\$1,087,397,220), chemical (\$984,689,110) and food (\$508,689,110). These statistics do not include the more than 3,000,000 persons estimated to be engaged in hand or cottage industries which play an important part in the economy. The cottage industry is prominent in spinning and weaving of silk and cotton, and in the manufacture of bicycle parts. After 1931 a considerable expansion took place in the heavy industries—metal, machine-building and chemical—which were adaptable to war purposes. State control was intensified at the same time. Directives issued by SCAP late in 1945 provided for the early dissolution of huge interlocking monopolies in business and finance, which involved approximately 1,200 firms. A directive issued Aug. 24, 1946 ordered the seizure for reparations of 505 of the largest industrial plants, mostly private-owned, which accounted

for 95 percent of the Japanese pig iron output, 88 percent of the steel ingots, 50 percent of machine tools and 87 percent of shipbuilding facilities. Shipbuilding capacity was to be reduced to 650,000 gross tons annually (from 1,900,000 tons), steel ingots to 3,500,000 metric tons, pig iron to 2,000,000 tons (3,000,000 tons in 1939) and sulphuric acid to 3,930,000 tons. Government-owned armament plants and naval yards were seized earlier in the year.

TRADE. Before World War II, Japan ranked fifth in world trade. Exports in 1939 totaled \$928,533,000. Imports totaled \$757,514,000 of which 34.4 percent came from the U. S. Major exports were raw silk, cotton cloth, machinery and parts, artificial silk tissues, and canned foodstuffs. Major imports were raw cotton, beans and peas, coal, oil cake, and rubber. Exports for Sept. 1945-May 1946 were \$51,477,000 and imports, \$27,846,000.

COMMUNICATIONS. On Dec. 31, 1939 Japan had 4,084 ships of more than 100 tons with an aggregate of 5,728,779 tons. As of Sept. 30, 1938 there were 17,791 sailing ships comprising 1,046,476 tons. Before World War II the merchant marine carried almost 80 percent of the foreign trade and was surpassed only by those of the U. S. and Britain. Its tonnage was estimated at from 1,000,000 to 1,500,000 in Sept. 1945.

Railway mileage in 1938 totaled 15,176 of which 10,940 was state-owned. The excellent highway system totaled 534,424 miles. There were 1,006,498 telephones and 228,416 miles of telegraph wire in 1939 and 35 broadcasting stations and 4,932,000 radio sets in 1940.

FINANCE. Revenues in 1940 were \$1,053,-213,840 and expenditures, \$788,387,040. The national debt in 1944 was 77,554,800,000 yen. The Bank of Japan, the central bank of note issue, had a paid-up capital of 45,-000,000 yen in 1941 of which the Imperial Household held 47 percent.

NATURAL FEATURES AND RESOURCES. Japan's four main islands and square mile area are Honshu, 87,028; Hokkaido, 30,148; Kyushu, 16,591; and Shikoku, 7,244. The Ryukyu chain to the southwest is U. S. occupied and the Kuriles to the northeast are Russian occupied. The surface of the main islands consists largely of mountains separated by narrow valleys. There are eighteen active volcanoes, including famous Fujiyama overlooking Tokyo from 12,395 feet of elevation. Earthquakes are frequent. The one in 1923 destroyed a third of Tokyo, all Yokohama, and killed almost 100,000 persons. Japan has many rivers, broken by shallows and rapids, and navigable in general only for flat-bottomed boats.

CLIMATE. Japan ranges from subtropical in its southern extremes, to a place of winter cold and snow in Hokkaido. The

winter temperatures are moderated in the central islands by the Japan Current. Rainfall averages 62 inches a year.

MINERALS. Japan is relatively poor in minerals. Recent output figures are 46,296,000 tons of coal and 9,810 tons of lead in 1936; 10,100,000 ounces of silver in 1938 and the following in 1939: 1,904 tons of tin, 85,979 tons of copper, 783,074 ounces of gold, and 2,654,000 barrels of oil, including Formosa production. Miners increased from 274,694 in 1935 to 435,810 in 1939.

FORESTS. Japan is well-wooded, with about 60,000,000 acres of forest. The 1938 value of all forest products was \$216,600,251. Included was bamboo, camphor, charcoal, and 850,578,006 cubic feet of timber. The wood pulp industry reached an output of nearly 900,000 tons in 1941.

FISHERIES. Fishing, one of Japan's biggest industries, provides a staple food and considerable exports in normal years. In 1938 the industry employed 1,442,713 persons, of whom 1,035,878 were fishermen. The fishing fleet totaled 356,482 vessels of which 288,327 were engineless, and part of it ranged from Alaska to the South Sea.

MAJOR SEA PRODUCTS, 1939

Product	Tons	U. S. dollars
Total		93,321,924
Sardines		
(coastwise)	1,034,233	11,008,318
Whales	9,519†	6,952,114
Cuttle Fish	116,568	5,140,670
Salmon	80,192	3,375,197
Pagrus "Tai"	12,401	3,011,711

*Excluding "fish culture" products valued at \$17,459. †Number.

Korea (Chosen)

Area: 85,225 square miles.

Population (est. 1940): 24,326,327.

Density per square mile: 285.4.

Military Governors: Col. Gen. I. Christoff (Soviet); Lt. Gen. John R. Hodge (U. S. A.).

Principal cities (census 1940): Keijo (Seoul) 935,464 (capital); U. S. zone headquarters: Heijo (Pyongyang), 285,965 (Soviet zone headquarters); Fusan (Husan), 249,734 (chief seaport); Seishin, 197,918 (seaport); RR center: Taikyū, 178,923 (silk center).

Monetary unit: Japanese yen.

Racial stock: Korean except (1939) 650,000 Japanese and 49,815 non-Japanese foreigners, mostly Chinese.

Languages: Korean, Japanese.

Religions: Buddhism, Confucianism, Taoism, Christianity (500,300 Christians in 1938).

Korea, situated on a peninsula about 150 miles long poking out from Asia between the Yellow Sea and the Sea of Japan, about the size of Minnesota. Over centuries it belonged sometimes to China

sometimes to Japan. It emerged from World War II under Russian and U. S. occupation but with the promise that it would receive independence "in due course."

In 108 B. C. Korea was annexed to China, and later divided into three small principalities. Koryu, the strongest of these, asserted independence in 918 A. D. In 1592 the Koreans defeated a Japanese fleet and, with Chinese help, ousted some Japanese invaders from their land. In 1627, the Manchus seized Korea and placed it again under Chinese sovereignty. In the Sino-Japanese War of 1894-95, Japan won principal influence in Korea, and in 1905 Japan reduced the country to a protectorate. In 1910 Japan formally annexed Korea and in 1919 the Japanese cruelly suppressed a Korean bid for independence.

A small Korean army was led by General Li Chungchun with headquarters in Chungking. In 1944 a provisional government was formed under President Kim Koo and Vice President Dr. Kuisc Kimm, with General Yaksan Kim as war minister.

The long subjugated Koreans received little experience in self-government under Japan and today are split into many factions ranging from Right to Left. U. S. and Russian differences over how to handle the present move toward independence have hampered the rehabilitation of the country. The U. S. zone of occupation has about 43 percent of the area, 17,000,000 population, and is controlled by 50,000 troops. The Russian zone, with about 9,000,000 population, is occupied by about 200,000 troops.

The Japanese made Japanese the language of instruction and stressed vocational rather than cultural education. In 1938 there were 3,372 elementary schools with 1,311,270 pupils, 110 high schools with 10,144 pupils, 226 technical schools with 4,060 pupils, ten normal schools with 5,565 students, and eighteen special colleges with 1,015 students. The one university, at Keijo, had 350 Japanese and 206 Korean students. There were 9,086 Korean students in Japan. The Korean language differs greatly from Japanese and Chinese and uses an alphabet. The Korean population is more or less homogeneous and successfully withstood Japanese efforts to assimilate it.

Korea, predominantly agricultural, cultivates about 12,000,000 acres. The 1938 production included 3,991,302 tons of rice, 226,376 tons of barley, and millet, rye, soybeans, tobacco, cotton, wheat and apples. Ginseng, a medicinal root, is intensely cultivated—611 tons in 1938. Raw silk production averages about 25,000 tons a year. In 1939 Korea had 1,705,000 cattle, 400,000 swine, 57,000 horses and 20,000 sheep.

Industrial development was speeded in the last years of Japanese rule. In 1938 there were 6,233 plants with 5 or more workers and total output valued at \$276,194,366. The leading industries by value of output were chemical, textile, food, beverages and tobacco. The northern part of the country now under Soviet occupation has the larger portion of Korea's industry, including large chemical fertilizer plants at Konan (Hungnam) on the east coast, an important oil refinery at Wonsan and a large hydroelectric plant on the Yalu River.

Korea's prewar foreign trade was closely linked with that of Japan. Exports in 1939 were valued at \$261,394,000, of which 71.4 percent went to Japan and 20.4 percent to Manchukuo. Imports were \$360,058,000, of which 87.1 percent came from Japan and 5.8 percent from Manchukuo. The major exports were rice, fertilizer, cotton cloth, soybeans and raw silk. Major imports included machinery and instruments, silk cloth, coal, timber and paper. Trade during the wartime years continued on about the same level.

Korea had 738 steamships with a tonnage of 106,712 and 1,125 sailing ships with a tonnage of 45,431 in 1939. Land communications, well developed by the Japanese for strategic reasons, included 2,619 miles of government and 1,107 of private railway in 1940 and 17,011 miles of highway.

Revenue in 1940 totaled \$157,986,998; expenditures, \$156,130,163; national debt in 1939, \$175,210,786. The only authorized legal tender in the U. S. zone are notes of the Bank of Chosen and type "A" supplemental Allied Military yen. The officially fixed rate for military purposes is fifteen yen to the dollar.

Korea's coast, with a rugged mountain range along the east, is fringed with more than a thousand islands. Several rivers are navigable for over a hundred miles, including the Nakdong in the north, the Han in the central region and the Yalu in the west. The climate is equable, about like that of the eastern United States. Annual rainfall is about forty inches.

Korea's best mining regions are in the north. Output for 1936 included gold, 616,935 ounces; coal, 2,515,449 tons; silver, 2,074,825 ounces; copper, 409 tons; and tungsten ore, iron ore, graphite lead, alum stone and pyrite ore. Steel production in 1936 was 95,300 tons; pig iron, 171,408 tons.

Despite Japanese exploitation, considerable Korean forest areas remain, especially in the north. The 1938 value of forest products was \$47,442,043, including 93,548,826 cubic feet of timber. Most of the fishing companies were Japanese-owned before 1945. Value of the 1938 catch was \$24,775,984.

Lebanon (Republic)

Area: 3,475 square miles.

Population (est. 1943): 1,025,000.

Density per square mile: 298.2.

President: Sheikh Bishara el Khoury.

Prime Minister: Riyad es Solh.

Principal cities (est. 1943): Beirut, 234,000 (capital, chief port); Tripoli, 70,800 (oil pipeline terminus).

Monetary unit: Syrian-Lebanese pound.

Racial stock: Arabian, Armenian, Circassian, Turk.

Languages: Arabic, French.

Religions: Maronite, Greek Orthodox, Greek Catholic, Mohammedan.

Ancient Lebanon is three times the size of Rhode Island and sits at the eastern end of the Mediterranean, between Palestine and Syria. In ancient times it was the mountainous hinterland of the Phoenician coast towns. From the 7th to the 11th centuries there infiltrated into southern Lebanon the heretics of Islam who finally coalesced into the Druse community.

In the 19th century the Turkish Sultanate encouraged the Druses to wage civil war against the Christian Maronites and after a massacre of 2,500 Christians in 1860, Lebanon was occupied by the French for a year. From 1864 to 1914, a Christian military government ruled the area under nominal Turkish sovereignty. After World War I, France received a mandate over Syria and Lebanon. The French drew a Lebanese border in 1920 to offset predominantly Moslem Syria and proclaimed the area a republic under French control on May 23, 1926.

Vichy controlled Lebanon after the fall of France in 1940 in World War II, but Allied forces moved in and established control by July 16, 1941. Despite Syrian objections, the French permitted Lebanon to declare its complete independence on Nov. 29, 1941.

The modern Lebanon republic is governed by a president elected by parliament, and a cabinet of ministers appointed by the president, but responsible to parliament. An independent army is being formed, based on a cadre of specialists formerly part of the French army in the Levant.

In 1942, there were 138,318 students attending various state, Moslem, Christian, private, French, American and British schools. Beirut has two universities. The Jesuit University of St. Joseph teaches in French; the American University uses English and Arabic. Christians are in the majority in Lebanon, as opposed to predominantly Moslem Syria.

Lebanon produces tobacco, olives, grapes and other fruits, wheat and silk. Manufacturing is confined mainly to local consumer goods. The silk industry is im-

portant in Beirut and Tripoli. Tobacco manufacturing is a government monopoly. The only available foreign trade statistics are combined with those of Syria. Beirut, the chief port, ships out silk, fruit and carpets; and imports machinery, tin plate and textiles.

A rail line links Beirut with Damascus and Syria. Another, built in World War I by Allied engineers, runs from Tripoli to the Palestine border, and is part of a line from Cairo to Istanbul, via Haifa in Palestine. Air service is available to Cyprus. One of the oil pipelines from the Kirkuk field in Iraq terminates in Tripoli.

The 1946 budget balanced at £SL60,040,000, with about 20 percent allocated for public works, and 20 percent for defense.

Lebanon has a hot dry summer, a cool rainy winter and no large streams. The topography is varied. There is a narrow coastal plain, and the steep Lebanese Mountains reaching a height of 9,900 feet at Mt. Sannin. Iron ore deposits are worked in the south, and building stone and marble are plentiful. The country also has thick deposits of inferior lignite coal.

Liberia (Republic)

Area: c. 43,000 square miles.

Population (est. 1938): 2,500,000.

Density per square mile: 58.1.

President: William V. S. Tubman.

Principal city (est.): Monrovia, 10,000 (capital and chief port).

Monetary unit: Liberian dollar.

Racial stock (est.): Negro (native), 99%; Negro (American), .8%; White, .1%.

Languages: English (official), native tongues.

Religion: Protestant Christian (official); Mohammedan, Catholic, Pagan.

In 1816, the American Colonization Society received a charter from Congress authorizing it to send emancipated Negro slaves to the west African coast. The first settlers, led by Jehudi Ashmun, landed in 1822 at Cape Mesurado near the present site of Monrovia. White governors, named by the society, administered Liberia until 1841. On July 26, 1847, independence was proclaimed, and the first president was Joseph J. Roberts, a Virginia octroon.

Between 1920 and 1932, during the presidency of C. D. B. King, considerable progress was made toward opening Liberia's interior, but even today only about 100,000 of its coast dwellers are regarded as civilized, and lack of transportation hampers development of the heavily forested inland. In 1942 a U. S.-Liberia agreement admitted U. S. troops to build and defend airports for the bomber command during World War II. In 1945 an agreement was announced providing

permanent U. S. military and naval bases in Liberia.

The government is modeled after that of the United States. The president and vice president are popularly elected for eight years. The twenty-one-member House of Representatives is elected for four years and the ten-member Senate for six years. Suffrage is extended only to landowners over twenty-one who are of Negro blood. The settled coast region divides into five counties for administration. Liberia's army, of about 4,000 men, is organized on a militia basis with every citizen liable for service from the age of sixteen to forty-five.

Education, compulsory in theory, is conducted in 190 schools, about half state and half mission. Attendance is about 5,000. There are six state high schools, a normal school, a state college and the Booker T. Washington Industrial and Agricultural Institute.

The English-speaking descendants of U. S. Negroes, known as Americo-Liberians, are the intellectual and ruling class. The aborigines, virtually all uncivilized, are divided into twenty-eight tribes speaking different dialects. Some are Moslems, some pagans. The Christians include Anglicans, Methodists, Baptists and Presbyterians.

Agriculture, on a crude level, is the principal means of livelihood for the tribal Liberians who raise coffee, rice, sugar cane and cassava. Manufacturing is nonexistent except for small native industry, and the country's only big enterprise is the million-acre concession granted in 1925 to the Firestone Plantations Company for rubber cultivation. Production was 5,320 tons in 1939, but has more than doubled since then.

Most of the trade is with the United States. Exports in 1944 were \$10,495,452, of which 90 percent was rubber and 9 percent raw gold. Imports were \$4,103,908, including machinery, vehicles, chemicals, foods, textiles and metal goods.

Liberia has no railroads. Coastwise communication is supplied by Pan-American Airways. Interior travel is by foot with native bearers. In 1939 there were less than 300 miles of roads, but U. S. troops built considerably more. The rubber plantations have the only telephones. There are no harbors but a port and naval base under construction at Monrovia, with U. S. assistance, at a cost of \$12,500,000.

Finances are under U. S. supervision. Revenue in 1943 was \$1,317,000 and expenditures, \$1,044,000. The national debt on Jan. 1, 1944, was \$1,193,000.

Liberia, about the size of Ohio, has a 350-mile frontage on the west coast of Africa, between Ivory Coast and Sierra Leone. Its only well developed area is a low coastal strip running inland about seven miles.

Beyond that is a low plateau, some of it mountainous, and traversed by many rivers, of which the Cavalla and the St. Paul are the most important. The climate is tropical throughout, with rainfall up to 150 inches a year on the coast.

Mineral resources are relatively unexploited. Gold is the most important one. Iron ore, mica and diamonds also are known to exist.

Much of Liberia is densely forested. Palm kernels and the plassava fiber are the principal forest products. Rubber trees grow wild.

Liechtenstein (Principality)

Area: 65 square miles.

Population (census 1941): 11,102.

Density per square mile: 171.5.

Ruler: Prince Franz Joseph II.

Chief of Government: Dr. Alexander Frick.

Principal city (census 1941): Vaduz, 2,020 (capital).

Monetary unit: Swiss franc.

Racial stock: German.

Language: German.

Religion: Roman Catholic.

Liechtenstein has the area of Boston, and lies on the right bank of the Rhine, just above Lake Constance, between Austria and Switzerland. It abolished its army in 1868 and has managed to stay neutral and undamaged in European wars. When Russian renegades and fleeing Germans broke into the country in 1945, the populace prepared to evacuate all towns and hide in the forest to avoid any provocative incidents. About the same time, Liechtenstein refused asylum to Pierre Laval, the French traitor.

Wheat, wine and fruit are the chief products. There are small manufactures of cotton, leather and pottery. The country's taxes are quite painless. For many years it had no debt, but at the beginning of 1945, the debt was 2,732,503 francs. In 1942-43, there were forty-two elementary schools and twenty continuation schools, with 1,701 pupils.

Liechtenstein was founded in 1719, made up of the Lordships of Vaduz and Schellenburg, immediate fiefs of the Holy Roman Empire. It seceded from the empire in 1806, joined the Rhine Federation until 1815, the German Confederation until 1866, and then became independent. Franz Joseph II, the reigning prince, was born in 1906, and succeeded his great uncle, Franz I, on July 25, 1938. In 1943, Franz Joseph married Countess Gina von Wilczek, of Austrian nobility.

The constitution has, since 1921, provided for a legislature, The Landtag, of fifteen members elected by direct, uni-

versal suffrage. Liechtenstein adopted Swiss currency in 1921, and has been part of the Swiss Customs Union since 1924. Its foreign trade statistics are included in those of Switzerland which administers the country's telegraph and postal service.

Liechtenstein's tiny area includes low valley land and upland peaks—Falkais at 8,401 feet, and Naafkopf, 8,432 feet. The chief mineral product is marble.

Luxembourg (Grand Duchy)

Area: 999 square miles.

Population (est. 1942): 301,000.

Density per square mile: 301.3.

Ruler: Grand Duchess Charlotte.

Premier: Pierre Dupong.

Principal city (census 1935): Luxembourg, 57,740 (capital, iron and steel).

Monetary unit: Luxembourg franc.

Racial stock: See Language.

Languages: Luxembourgian, French, German.

Religion: Mainly Roman Catholic.

Little Luxembourg, with about twice the area of Los Angeles, is a so-called buffer state between France, Germany and Belgium, and in World Wars I and II it was thoroughly buffeted about by Germany. Invaded and occupied both times despite the fact that it was supposed to have guaranteed neutrality, Luxembourg suffered worst in World War II when the Nazis deported several thousand natives as slave labor.

Luxembourg is a happy, little land in which a third of the nation raises crops and cattle, while all the nation derives prosperity from the iron and steel industry based on the rich iron ore deposits in the south of the country. Normally, Luxembourg has little unemployment, almost no illiteracy and such low taxes that many foreign holding companies maintain seeming headquarters there to escape high taxes in other countries.

Siegfried, Count of Ardennes, an offspring of Charlemagne, was Luxembourg's first sovereign ruler. In 1060 the country went under the rule of the House of Luxembourg, four of whose members became Holy Roman Emperors. From the 15th to the 18th centuries, Spain and Austria held it in turn. The Congress of Vienna in 1815 made it a Grand Duchy and gave it to William I, King of the Netherlands. In 1839 the Treaty of London ceded the western part of Luxembourg to Belgium. In 1890 the last magnate of the House of Nassau, Adolphus, succeeded to the throne. His son, William, took over rule in 1905, and William's daughter, Marie Adelaide, became ruler in 1912.

In 1919 the Grand Duchess abdicated and was succeeded by her sister, Princess

Charlotte, who was subsequently confirmed in power by a 1919 national referendum. After the Nazi invasion on May 10, 1940, the government fled the country, returning on September 23, 1944, after Allied troops had liberated it.

Luxembourg is a constitutional monarchy with the crown hereditary in the House of Nassau. The sovereign is the Grand Duchess Charlotte, born Jan. 23, 1896 and married on Nov. 6, 1919, Prince Felix of Bourbon-Parma. The heir to the throne is Prince Jean, born Jan. 5, 1921. The constitution of 1868 (with changes in 1919 limiting the power of the sovereign and instituting universal suffrage with proportional representation) provides for democratic government through a popularly elected chamber of deputies of 55 members. The chamber of deputies elected Oct. 21, 1945 for a term of 6 years includes 25 Christian Socialists, 11 Socialists, 9 Democratic Group, 5 Communists and 1 Independent. The constitution leaves to the sovereign the right to organize the government which consists of a minister of state who is president of the government (premier) and at least 3 other ministers. There is also an upper chamber of 15 members, the council of state, whose members are chosen for life by the sovereign and which enjoys the right of advice, amendment of bills, and a limited veto. The government has no military department.

Education is compulsory for all children between the ages of 6 and 13. The common or idiomatic language is *letzeburgesch*. German and French are also spoken. Labor unions are strongly organized into a large federation.

Although the soil is not very fertile, agriculture is prosperous. Distribution of land is: 305,712 acres of arable land, 20,268 acres of forest, 67,555 acres of meadow and 3,829 acres of vineyards. Principal crops are potatoes, oats, wheat, rye and grapes.

The mining and metallurgical industries based on iron ore found in the south are the most important industries. There were in 1938, a total of 35 blast furnaces with more than 20,000 workers which produced 1,709,700 tons of pig iron; the 7 steel foundries produced 1,584,100 tons of steel. Metal manufactures were valued at \$50,000,000. Other important industries include brewing, sparkling wine, leather, textiles and cement.

By a customs union between Belgium and Luxembourg which came into force May 1, 1922, to last for 50 years, customs frontiers between the two countries were abolished and Luxembourg customs joined to those of Belgium. Total customs, plus the product of certain internal excise duties, are divided after a small deducti-

used to encourage Luxembourg cereal growing in a proportion of 28 to 1. Luxembourg's trade figures are included in those of Belgium and no separate statistics are available; however, the major proportion of the exports consists of iron and steel products.

Transportation facilities in 1938 consisted of 318 miles of railway and 2,644 miles of highway, 1,301 miles of which are improved. The monetary unit is the Luxembourg franc whose value was fixed in 1935 at 1.25 Belgian francs. The consolidated debt in 1939 was 625,000,000 francs (\$25,000,000). Estimated revenue in 1939 amounted to 355,230,000 francs (\$14,209,000); estimated expenditures, 353,440,000 francs (\$14,137,600).

Luxembourg lies southeast of Belgium, borders France on the south, and Germany on the east. It is separated from Germany by the River Moselle and its tributary, the Sauer. It is a part of the plateau of Lorraine. The prosperity of the country depends upon its large iron ore mines which yielded 5,666,519 tons of iron ore in 1939. Pyrites (21,937 tons in 1939) is also produced.

Mexico (Republic)

(República Mejicana)

Area: 758,061 square miles.

Population (census 1940): 19,653,552.

Density per square mile: 29.9.

President: Miguel Alemán.

Principal cities: Mexico City, 1,448,422 (capital); Guadalajara, 229,235 (trade and manufacturing center); Monterrey, 185,833 (metallic industries); Puebla, 138,491 (industrial center).

Monetary unit: Peso.

Racial stock: Mestizo, 55%; Indian, 29%; White, 15%; Others, 1%.

Language: Spanish, 86%; Indian, 14%.

Religion: Predominantly Roman Catholic.

Mexico, the world leader in producing silver and sisal hemp and chicle for chewing gum, is four times the size of Spain, the source of its cultural heritage. It is one-fourth the size of the United States, the source of its modern industrial trend. Warm, mountainous Mexico has suffered a stormy political past, with bullets often speaking louder than ballots. Today the nation steers moderately leftward in deference to the needs of its millions of poor and too-illiterate peasants. It is a country of startling contrasts—ox-carts and airplanes, tractors and forked-stick plows, deserts and snow-capped mountains, jungles and fertile valleys.

Mexico's early history is shrouded in mystery but at least two highly civilized races—the Mayas and later the Toltecs—preceded the wealthy Aztec empire conquered in 1521 by the Spanish under

Hernan Cortes. Spain ruled for the next 300 years until 1810 (the date was Sept. 16 and is now celebrated as Independence Day) when the Mexicans first revolted. They continued the struggle and finally won independence in 1821 by the Treaty of Cordoba.

Turbulent years followed. From 1821 to the rise of Diaz in 1876, there were two emperors, several dictators and enough presidents and provisional executives to make a new government on the average of every nine months. Mexico lost Texas (1836) and after defeat in the war with the United States (1846-48) it lost the area of California, Nevada, Utah, Arizona, New Mexico and part of Colorado.

In 1855 the Indian patriot Benito Juarez began a series of liberal reforms including the disestablishment of the Catholic Church which had acquired vast property. A subsequent civil war was interrupted by the French invasion of Mexico (1861), the crowning of Maximilian of Austria as emperor (1864), and then his overthrow and execution by forces under Juarez who again became President in 1867.

During the rule of the dictator Porfirio Diaz (1876-80 and 1884-1911) the country was freed from political strife, made substantial economic progress, and gained a respected position in foreign relations. But Diaz' reactionary land policy led to revolution and his resignation in 1911. The next few years were marked by bloody political-military strife, and trouble with the United States culminating in the punitive expedition into northern Mexico (1916-17) in unsuccessful pursuit of the bandit-politician Pancho Villa. President Venustiano Carranza, who had shown pro-German sympathy in World War I, was assassinated (1920) and replaced by General Alvaro Obregon.

Plutarco Elias Calles (1924-28) largely abandoned Obregon's reforms and Obregon, re-elected (1928) on a radical agrarian and anti-clerical platform, was assassinated by a religious fanatic. There followed a series of Calles puppets who ruthlessly suppressed labor and farm organizations. General Lazaro Cardenas (1934-40), backed by the National Revolutionary Party (PRM), began a socialistic program of land distribution to peasants, government seizure of foreign-owned oil lands, and broad labor reforms. General Manuel Avila Camacho, President during World War II, played closely with the United Nations and followed Cardenas' policy at home. Meanwhile, when Franco took over Spain, Mexico became virtually the sponsor of the Spanish republican government-in-exile.

In July of 1946, Miguel Alemán was elected President, backed by the Camacho administration and the PRM. It was the most peaceful election in Mexican history.

GOVERNMENT. The President, popularly elected for six years and ineligible to succeed himself, governs with a cabinet of his appointed ministers. The Federal Congress has two houses—the 170-member Chamber of Deputies, elected for three years on a population basis; and the 58-member Senate, elected for six years with two Senators from each of the twenty-eight states and two from the Federal District (Mexico City). All married male citizens at least eighteen years old, and all single male citizens at least twenty-one are eligible to vote.

Federal District and Circuit Court judges are elected by the Federal Congress for six years, while the Federal Supreme Court judges are elected for life. Each of the states has considerable autonomy with a popularly-elected governor, one-house legislature and local judiciary. The President appoints the governors of the three Federal territories, and the governing body of the Federal District.

AREA AND POPULATION OF POLITICAL SUBDIVISIONS OF MEXICO, 1940

Political subdivision	Area in sq. mi.	Population	Population per sq. mi.
Federal district . . .	572	1,757,530	3,072.6
States			
Aguascalientes . .	2,498	161,693	64.7

Territorio Norte . . .	27,648	78,907	2.8
Territorio Sur	27,971	51,471	1.8
Total	758,061	19,653,552	25.8

Military service is compulsory, and the President holds supreme command of the armed forces, through the Secretary of War. The standing army (1940) was of 56,000, with 150,000 reserves and the force had 700 men and ninety planes, large materiel and manpower increases were effected during World War II. Mexican U. S.-trained 201st Fighter Squadron saw action in the Pacific in 1945. The national police force, little more than a police force, consists of six sloops, ten coast guard vessels and other minor craft.

EDUCATION. Illiteracy, affecting about 40 percent of the people, is one of Mexico's problems, and the government is trying hard to reduce the rate. Education is free and compulsory from six to sixteen, divorcing from religion and under Federal control. There were (1945) about 25,000 primary schools with two million enrollment. Secondary schools had enrollment of about 80,000. The ten universities had a total of 30,000 enrollment, of which 22,230 attended the University of Mexico, in Mexico City.

RELIGION. About 90 percent of Mexicans are Roman Catholics, but all religions are tolerated. The 1857 Constitution separates church and state. The church can not acquire property, and its present holdings are deemed to belong to the state. Priests, who must be Mexican-born, can not take part in politics.

GOVERNMENT CONTROL. Federal control of the national economy is ever increasing in Mexico. The government regulates food production, fixes minimum prices, and controls both exports and imports. Since 1930 it has consistently broken up large estates for distribution of land to the poor or state-owned communal farms. In 1941, the right to the land began to pass to the peasants themselves. The right to strike, a 48-hour week, fixed minimum wages and a social security system—all these have been established by the government.

AGRICULTURE. Some Mexicans still plow with forked sticks, but primitive methods are steadily giving way to the modern. About 10 percent of the 1945 Federal bud-

ent for irrigation projects. This brought 17 million acres the total of cultivated land, against a total estimated potential of more than 37 million acres. About 2½ million acres are irrigated now but the eventual total of watered land is expected to be 2 million acres. More than half of the land grows corn—a staple item in the national diet. The Yucatan peninsula, at the southern end of the Gulf of Mexico, raises more than half of the world supply of sisal hemp.

MAJOR AGRICULTURAL CROPS OF MEXICO, 1941

Crop	Acres	Tons
Alfalfa	103,740	1,990,361
Beans	1,659,840	176,392
Coffee	330,980	59,628
Corn	8,625,240	2,341,379
Cotton	780,520	88,778
Cucumbers	271,700	114,639
Potatoes	56,810	101,797
Rice	135,850	124,902
Sesame	259,350	64,731
Sugar cane	286,520	6,257,854
Wheat	1,368,380	351,284

Stockraising is important on non-arable land. Mexico's 1943 inventory of livestock showed 10,082,958 cattle, 1,887,478 horses, 21,343 mules, 2,159,734 asses, 3,673,887 sheep, 6,544,129 goats and 3,698,233 hogs.

INDUSTRY. Considering its cheap labor, abundant raw materials and available water power, Mexico is industrially backward. However, steady expansion is taking place. In 1940 there were 12,624 factories or shops with 332,323 workers and a product value of \$579,137,240. Leading establishments were cotton textile mills with estimated annual production of 600 million yards; sugar mills and distilleries; cigar and cigarette factories, the latter turning out 17 million packs in 1945; shoe, binder, wine and soap factories; chemical works; breweries; flour, paper and coffee mills; iron and steel mills and foundries; and cement, glass and ceramic works.

COMMERCE. Exports in 1944 totaled \$258,-6,558, including vegetable products, 36 percent; mineral products, 24 percent; and textiles, 10 percent. Imports came to \$216,-0,700, including vegetable products, 29 percent; mineral products, 22 percent; machinery and iron goods, 19 percent. In 1945, however, imports exceeded exports. A total of 87 percent of Mexico's trade is with the United States. Latin America gets 5 percent and Europe, mainly Britain, 3.9 percent.

GEOGRAPHY. Mexico is largely a great, high plateau, open to the north, with mountain chains on east and west and with lean-front lowlands lying outside of them. It has two big spears—the peninsula of

Lower California which is mountainous, and Yucatan peninsula which is mostly a low plain. The eastern mountains are marked by high volcanoes including Popocatepetl, 17,888 feet and not entirely extinct; Ixtaccihuatl, 17,323 feet; and the loftiest, Orizaba, 18,209 feet. None of Mexico's many short streams is navigable to any major extent.

CLIMATE. Partly in the torrid and partly in the north temperate zone, Mexico has three distinct climate regions. From the coasts inland to the plateau it is tropical with temperatures sometimes topping 100 degrees. The plateau is sub-tropical with an average of 75 degrees, and the mountains, over 6,000 feet, average 60 degrees. On the east coast the annual rainfall sometimes reaches 100 inches, while in Lower California rain hardly ever falls. Rainfall on the plateau runs twenty to forty inches a year, comparable to the west central United States. When U. S. baseball players went to Mexico they found that they could slug the ball tremendous distances through the rarefied air, but the same air made them tire quickly.

MINERALS. Mexico leads the world in silver production, mining about 40 percent of the total. It also is high in antimony, cadmium, lead, oil and zinc. The 1944 mineral value was \$146,408,500, of which precious metals totaled \$50,786,610. Most of the mining properties are foreign-owned and the industry is declining in relative importance. The oilfields, lying along the east coast, were seized by the government in 1938 and later the foreign owners were paid for them. There are seventeen plants and five refineries with daily capacity of 150,000 barrels.

FORESTS, FISHERIES. Mexican timberlands in 1945 were 25,893,993 acres, and 1942 production in cubic feet included pine, 33,315,000; mahogany, 1,315,250; red cedar, 1,045,320; white cedar, 432,600; and primavera, 91,820. Charcoal, resins and other by-products came to 50,265 tons. Yucatan produces nearly all of the world's chicle, the juice of the sapodilla tree, the base of chewing gum. Chicle exports in 1941 were 6,000 tons worth \$5,155,000. Mexico's fishing industry is small and local.

Mexico has about 15,000 railroad miles and the 1944 freight total was 17,117,277 tons, of which the nationalized lines carried more than half. There were 80,000 automobiles in 1940, and over 36,000 miles of improved highway in 1945. Merchant ships in 1940 totaled 1,657,899 gross tons, and Mexico's twenty-two seaports handled 5,683,391 tons. Vera Cruz and Tampico, both on the Gulf of Mexico, are the most important ports.

In 1943 Mexico had fourteen airline companies with 15,980 miles of routes. By early 1946, thirty-five companies were operating. Communication facilities include 25,719

miles of Federal telegraph lines, 17,066 miles of private and state-owned lines (1940), 200,000 telephones (1944), 350,000 radios and 141 broadcasting stations (1941).

Mexico's external debt (1942) was nominally estimated at \$235,000,000, of which 60 percent was held by Axis-controlled nationals, and 40 percent about evenly split among United States and British holders. The 1945 national budget was \$207,377,625 (\$227,150,000 in 1944) of which about two-thirds was divided among agriculture, education, national defense and communications. The government Bank of Mexico is the only bank of issue. In 1936 there were sixty-six other banks. U. S. direct investments in 1940 were \$357,927,000; British investments, (1944) were £137,834,190.

Monaco (Principality)

Area: .59 square miles (370 acres).

Population (census 1939): 23,973.

Density per square mile: 40,637.1.

Ruler: Prince Louis II.

Principal cities (census 1939): Monaco, 1,938; La Condamine, 11,339; Monte Carlo, 10,681.

Monetary unit: French franc.

Language: French.

Religion: Roman Catholic.

A tiny, hilly wedge driven into the French Mediterranean coast nine miles east of Nice, Monaco is a little land of pleasure with a pre-war tourist business that ran to 1,500,000 visitors a year. The home of world-famous Monte Carlo, a place of benign sun and balmy air, Monaco offers golf, tennis and bathing by day, and drinking, dining and gambling by night. Residents of Monaco are forbidden to enter the gaming rooms but they have compensations. They pay no taxes and most of them make good livings from the thriving tourist business.

Monaco, with its beautiful terraced hills and crags, had popular gaming tables as early as 1856. Five years later, a fifty-year concession to operate the games was granted to François Blanc, of Bad Homburg. This concession passed into the hands of a company in 1898, and was extended to 1947. All the governmental expenses are paid from the resultant revenue. The concession's annual license fee since 1936 has been 100,000 pounds. Under German occupation during part of World War II, Monaco had to submit to a curfew and a great loss of gaiety but the war's end saw it planning for a speedy return to the old days of pleasure and plenty.

Monaco's trade is, of course, small. It exchanges olive oil, oranges and perfume for wine and coal.

The Phoenicians, and after them the

Greeks, had a temple on the Monaco headland honoring Hercules. From Monakos, the Greek surname for this mythological strong man, the principality took its name. After being independent for two years, Monaco was annexed to France in 1793 by the French Revolutionists, and then placed under Sardinia's protection in 1815. In 1861 it went under French guardianship, but kept its independence.

Prince Albert of Monaco gave the principality a constitution in 1911, creating a national council of twenty-one members elected for four years. The government is under a ministry, acting on the prince's authority. The heiress to the throne, Princess Charlotte, renounced her claim to the throne in 1944 in favor of her son, Prince Renier, who was born in 1923.

Nepal (Military Oligarchy)

Area: c. 54,000 square miles.

Population (est. 1938): 5,600,000.

Density per square mile: 103.7.

Ruler: Mahārājadhīrāja Tribhuvana Bir Bikram Jung.

Prime Minister: Maharaja Sir Padma Shumshur Jung Bahadur Rānā.

Principal city and capital (est.): Katmandu 108,000.

Monetary unit: Nepalese rupee.

Racial stock: Gurkha (predominant), Magar, Gurung, Bhotia, Newar.

Languages: Pārbiatī, Gubhāijū, Tibetan.

Religions: Hinduism, Buddhism.

HISTORY. A landlocked country about the size of Iowa, lying between India and Tibet, Nepal has two great distinctions. It contains Mt. Everest, 29,141 feet high, the tallest measured mountain in the world. And it produces some of the toughest fighting men in the world—the Gurkhas.

The Gurkhas, led by Rajah Prithvi Narayana, invaded Nepal from India in 1768 and conquered it. Today they are the dominant people in the land. A commercial treaty was signed with Britain in 1792, and in 1815 after a year's hostility the Nepalese agreed to allow British residents to live in Katmandu, the capital. In 1923 Britain recognized the absolute independence of Nepal.

Nepalese troops assisted the British during the Indian Mutiny, the Tibet War, 1904, World War I, the Afghan hostilities of 1919 and World War II.

GOVERNMENT. Theoretically, the king is supreme but actually real power since 1867 is with the prime minister, picked from among the ruling family whose members are Hindu Rajputs. Under the prime minister is a council consisting of members of the ruling family, the military, high priests and other high officials. The predominant Gurkhas are essentially

ilitary caste. The army numbers about 0,000 regulars and 25,000 reserves. Over 0,000 Gurkha volunteers fought with the Indian Army in the Burma campaign of World War II, supplying most of the personnel of three famous regiments—the Assam Rifles, Assam Regiment and Burma Rifles.

SOCIAL AND ECONOMIC CONDITIONS. Nepal has a college at Katmandu and many schools in the main valley. Cultivated and irrigated where possible, the valley grows rice, wheat, pulse, fruits and vegetables, spices, sugar cane and potatoes. A few sheep and cattle are grazed. Manufacturing is limited to native handicraft. Trade with India passes through various frontier stations, and there are two mountain trade routes to Tibet.

Main exports include hides, skins, opium, gums, resins, dyes, jute, wheat, pulse, rice, and furs and timber. Major imports include iron, cattle, sheep and goats; salt, sugar, tobacco, raw cotton, oil, and textiles. Two roads enter Nepal—one from Raxaul to Amleikganj, the other from Jayauagar to Bijulpora. Communication is for the most part difficult and motorable roads are almost non-existent.

NATURAL FEATURES AND RESOURCES. Along its southern border, Nepal has a strip of level land which is partly forested, partly cultivated. North of that is the range of the Himalayan Range including Annapurna and many peaks over 20,000 feet. Mineral resources, nearly all unexploited, include lignite, copper, zinc, lead, sulphur, marble and iron. Southern Nepal has valuable forests which yield gum, timber, resin and dye. Hemp plants grow wild.

Netherlands (Kingdom)

(Koninkryk der Nederlanden)

Area: 12,742 square miles.

Population (est. 1945): 9,130,000.

Density per square mile: 716.6.

Governor: Queen Wilhelmina.

Prime Minister: Dr. L. J. M. Beel.

Principal cities (est. 1942): Amsterdam, 790,000 (capital, financial center); Rotterdam, 616,000 (chief port); The Hague (s'Gravenhage), 235,000 (seat of government); Utrecht, 163,559 (railway center); Haarlem, 137,576 (tulip center).

Monetary unit: Guilder.

Racial stock: Dutch.

Language: Dutch.

Religions (1930): Catholic, 36.4%; Dutch Reformed (Presbyterian), 34.2%; Other Protestant, 11.0%; Jewish, 1.4%; Others and no creed, 14.0%.

The Netherlands is small, half again as small as Massachusetts, but it is densely populated, is a major colonial power, and was

eighth from the top in world trade at the start of World War II. Occupied harshly by the Nazis until May of 1945, the Netherlands emerged with a fairly-well salvaged economy and with somewhat less of the political chaos that gripped much of Europe. The middle-of-the-road Catholic Party held a plurality in the national government, but in the 1946 elections in Amsterdam, the nation's largest city, the Communists were able to win more municipal council seats than any other party.

HISTORY. Julius Caesar found the low-lying Netherlands inhabited by Germanic tribes, the Frisii and Batavi but he was unable to conquer them and the Batavi on the Roman frontier did not submit to Roman rule until 13 B. C., and then only as allies. In the 8th century the area became part of Charlemagne's empire, and then was gradually split up into small feudal states which passed to the hands of Charles the Bold, Duke of Burgundy, in the 15th century. Royal marriage and royal inheritance shoved the Netherlands first under the Austrian Hapsburgs and then under Spanish rule. When Philip II of Spain suppressed political liberties and the growing Protestant movement in the Netherlands, a revolt was led by William the Silent, Count of Nassau and Prince of Orange. Under the Treaty of Utrecht in 1579, the seven northern provinces became in 1581 the Republic of the United Netherlands.

The Dutch East Indies Company had been established in 1602 and by the end of the 17th century, Holland was one of the great sea and colonial powers of Europe. In 1688 William III of Orange and his wife, Mary, the elder daughter of James II of England, became King and Queen of England. The power of the republic declined in the 18th century through the wars with Spain and France and in 1795 French troops ousted the last stadholder William V. The Batavian Republic was organized. It became a kingdom in 1806 under Napoleon's brother, Louis and in 1810 was incorporated into the French Empire.

Following Napoleon's defeat, the United Netherlands and Belgium became the "Kingdom of the United Netherlands" under William I, son of William V and head of the House of Orange. The Belgians withdrew in 1830 forming their own kingdom. William I abdicated in favor of William II in 1840; the latter was largely responsible for the promulgation of a liberal constitution in 1848. The Netherlands continued to prosper during the long reign of William III from 1849 to 1890. The male line of the House of Nassau became extinct with his death in 1890 and he was succeeded by his 10-year old daughter, Wilhelmina, who was crowned Queen in 1898. Neutrality was maintained during World War I, but overseas trade suffered heavily from the

Allied blockade and German submarine warfare.

The premier from 1933 to 1939, except for brief intermissions was Dr. Hendrick Colijn, leader of the Protestant Anti-Revolutionary Party. At the outbreak of World War II neutrality was proclaimed, but German troops invaded the country May 10, 1940, and by May 15 Dutch troops were ordered to lay down their arms. Queen Wilhelmina and Crown Princess Juliana fled to London where a government-in-exile was established under Premier P. S. Gerbrandy. The German Army in the Netherlands capitulated May 5, 1945 and on May 23, the Dutch cabinet met once more in the Hague and tendered its resignation to Queen Wilhelmina. A new cabinet was formed on June 23 under the leadership of Professor Willem Schermerhorn, a resistance leader and leader of the Labor party. The Catholic party obtained a plurality in the May 1946 elections and its leader, Dr. L. J. M. Beel formed a Labor-Catholic cabinet (July 2).

GOVERNMENT. Queen Wilhelmina, born August 31, 1880, daughter of King William III, succeeded to the throne November 23, 1890; assumed the government September 6, 1898, married (1901) to Henry, Prince of Mecklenburg Schwerin, born 1876, died 1934. Heir-apparent: Princess Juliana, born April 30, 1909, married on January 7, 1937 to Prince Bernhard zu Lippe-Biesterfeld, born 1911. Offspring: Princess Beatrix, born 1938; Princess Irene, born 1939, Princess Margriet Francisca, born 1943.

The Netherlands is a constitutional and hereditary monarchy, with female succession taking place only in default of male heirs. Executive power is vested exclusively in the sovereign, while legislative power rests with the sovereign and the States-General (Parliament). The upper chamber of Parliament, fifty members, is elected for 6 years by the provincial states. The lower chamber which shares with the government the privilege of initiating new bills and proposing amendment consists of 100 deputies who are elected directly for four years and retire en bloc. The executive power is in part exercised by responsible ministers, headed by the premier, who hold office at the pleasure of the sovereign. Certain legislative and many executive matters are normally referred to the State Council (Raad van Staat) consisting of fourteen members appointed by the sovereign. Suffrage is universal for all Dutch subjects of twenty-five years of age. Elections are on a basis of proportional representation and the sovereign has the power to dissolve either or both chambers, subject to new elections within forty days and the convocation of a new assembly within two months.

PROVINCIAL. Each of the eleven provinces has a local representative body—a Provin-

cial State—presided over by a royal commissioner. The State collects local taxes and legislates on local matters. Routine administrative work of the province is carried on by six members called the Deputed States. Each of the 1,054 communes has a locally elected council and a mayor appointed by the crown.

No cases are tried by jury. Minor offenses are tried by one judge in the cantonal courts of which there are sixty-two. More serious cases are tried by one of the 19 district tribunals with one or three judges. Beyond these are five courts of appeal, which in turn are subject to the High Court sitting at the Hague with five judges. All judges are appointed for life by the sovereign and can be removed only by decision of the High Court.

DEFENSE. Military service is compulsory with an initial training period of one year beginning at twenty with service on reserve until forty for enlisted men, to forty-five for non-commissioned officers and to fifty for officers. The partially mobilized Dutch army in 1939 consisted of 500,000 active troops and 160,000 reserves. The air force had 600 personnel and 325 planes. The Navy, the Army, the East Indies Army have separate air forces. The Netherlands fleet on Dec. 31, 1945 included 2 cruisers, 8 destroyers, 12 submarines, 3 sloops, 1 frigate and 4 fleet minesweepers. The light aircraft carrier Nairana (14,000 tons), 4 destroyers and 3 submarines were obtained from the British navy in early 1946. Bases are maintained in Holland, the Netherlands East Indies and in the Caribbean.

EDUCATION. In 1938 elementary schools numbering 7,812, of which 5,006 were private, had a total enrollment of 1,242,778. 288 secondary schools had 62,301 students. The 6 universities had 9,471 students. The four public universities are Leiden (founded 1575), Utrecht (1636), Groningen (1414) and Amsterdam (1632); the two voluntary universities are the Calvinist University of Amsterdam and the Roman Catholic University of Nijmegen. Education is compulsory from the ages of seven to thirteen. By an act passed in 1920, religious bodies are allowed to maintain denominational schools fully supported by the state.

RELIGION. The royal family and a large number of the inhabitants belong to the Dutch Reformed Church (Protestant), but there is complete religious freedom. Appropriations from the state budget are made for support of the Protestant, Roman Catholic, Jewish and Jansenist Churches. The Roman Catholic element is most marked in the southern provinces of Limburg and North Brabant.

POPULATION. In 1830 the Netherlands population was 2,613,500; in 1869, 3,580,000; in 1945, 9,130,000. In the immediate pre-

war period it increased about 100,000 a year, and today the Netherlands has the problem of too many people living in its small, crowded land. The birth rate (1936-38 annual average: 20.2) showed a distinct tendency to fall whereas further considerable decrease in the death rate (1936-38 average: 8.7) is scarcely possible.

AGRICULTURE. Nearly half the Netherlands lies below sea level. Of the total area of 6,595,362 acres, 2,602,384 is arable, 3,016,796 is meadowland, 168,995 is devoted to horticulture, arboriculture and fruit gardens and 693,052 is forested. Dutch farms are characteristically small with only a few over 250 acres. Dairying and dairy products are the most important branches of agriculture. In 1942 there were 2,440,553 cattle, 491,000 swine, 337,177 horses, 574,497 sheep. Poultry in 1938 numbered 30,521,292. Milk, butter and egg production are under state control; butter production in 1939 was 114,989 pounds; cheese, 102,889 tons. Large quantities of vegetables and fruits are raised for export. Almost as important as the dairy industry is the raising of tulip, hyacinth and other flower bulbs in the area around Haarlem. The Netherlands food crop harvested in 1945 was about 20 percent below the prewar level, and livestock production was less than 50 percent of prewar.

INDUSTRY. Most Netherlands industries derive from agriculture. The country is poor in mineral resources. An exception is the textile industry, which was the leading industry in 1938, with 50,374 workers and output valued at \$102,622,040; followed by the clothing industry, 38,242 workers and output of \$62,612,894; food industry, 7,184 workers and output of \$45,663,000; paper, 6,296 workers and output of \$20,787,351. The shipbuilding industry in 1937 had 34,458 workers and output valued at almost \$80,000,000. In 1938 there were 268 distilleries, 11 sugar refineries, 3 beet sugar factories, 110 breweries and 2,694 tobacco factories. Amsterdam is one of the world's leading diamond-cutting centers.

TRADE. At the start of World War II the Netherlands ranked 8th in world trade. Exports in 1938 were \$571,629,000; imports, \$778,650,000, excluding the transit trade with Germany and Central Europe which was of prime importance. The major exports by percentage, were: textiles, raw and manufactured, 8.3; coal and coke 6.2; butter 4.2; iron and steel 3.3; cheese 2.8; fertilizer 2.2; paper 2.1. Major imports, also by percentage, were: textiles raw and manufactured 10.4; cereals and flour 8.2; iron and steel 8.2; wood 4.6; coal and coke 3.7; mineral oil 2.2. Principal customers, also by percentage, were Britain 22.5, Germany 15.3, Belgium and Luxembourg 10.2, Colonial Empire 9.6, France 5.8 and United States 3.6. The major sources, again by percentage, were Germany 21.8, Belgium

and Luxembourg 11.5, United States 10.8, Britain 8.1, Colonial Empire 7.2 and France 4.6.

COMMUNICATIONS. The merchant fleet in 1939 included 1,532 vessels, of 2,972,000 gross tons but war losses cut this to 300 vessels of 1,614,094 tons in 1945. In 1938 a total of 21,096 vessels entered Dutch ports with a tonnage of 31,794,000. Of these, 70.9 percent entered Rotterdam. An extensive network of rivers expanded by many canals has led to a good development of inland shipping. The length of navigable canals and rivers in 1939 was 4,816 miles. The wealth of water transport has obviated wide railway development. In 1938 there were 2,278 miles of railway, all privately owned, and 15,793 miles of highway. In 1939 there were 747,053 radio sets and in 1942, 498,220 telephones.

FINANCE. Ordinary revenue in 1940 was estimated at \$394,000,000; expenditures at \$393,800,000. Public debt in March, 1944 was \$5,680,000,000. The Netherlands and its colonial empire ranked 6th in U. S. lend-lease assistance receiving \$178,054,000 worth of goods and supplies.

NATURAL FEATURES AND RESOURCES. Part of the great plain of north and west Europe, the Netherlands has maximum dimensions of 190 by 160 miles and is low and flat except in Limburg in the southeast where some hills rise to 300 feet. About half the country's area is below sea level, making the famous Dutch dikes a requisite to use of much land. Reclamation of land from the sea through dike-building has continued to recent times, and such land is usually very fertile. The province of Zeeland consists mainly of six delta islands guarding the mouth of the Scheldt River and the entrance to Belgium's port of Antwerp. Off the northwest coast are the sandy West Frisian Islands, lying from three to twenty miles out and stretching from the Zuider Zee to the German coast.

All drainage reaches the North Sea, and the principal rivers—Rhine, Maas and Scheldt—have origin outside the country. The Rhine is the most heavily used waterway in Europe and nearly three-fourths of its 75 to 85 millions of tons of annual traffic is handled through the Netherlands port of Rotterdam.

Marsh mists, sea fogs and a humidity exceeding 80 percent mark the Netherlands climate which produces colder winters than in eastern England at the same latitude. Utrecht, roughly central in location, has a January average of 32.4 degrees in temperature, and a July average of 62.6. Average rainfall for the country is about 28 inches.

Netherlands minerals are few. The only important ones are coal, 14,176,680 tons in 1939; lignite, 250,153 tons in 1939; and salt, 181,070 tons in 1938. There also are

peat swamps and about 700,000 acres of forest. The Netherlands fishing fleet in 1938 totaled 3,380 vessels and made a total catch of 240,669 tons valued at \$10,739,407. Herring—107,808 tons worth \$4,620,765—was the most important item.

NETHERLANDS OVERSEAS TERRITORIES

Country	Area (sq. mi.)	Population (est. 1941)
ASIA		
Netherlands Indies	735,268	71,534,000
AMERICA		
Curaçao	403	119,585*
Surinam (Dutch Guiana)	54,291	189,484†

*Est. 1943.

†Est. 1944.

NETHERLANDS INDIES: See **NETHERLANDS INDIES.**

CURACAO. *Status:* Autonomous part of Netherlands state. *Capital:* Willemstad (pop. 1943: 33,000). *Governor:* Dr. Pieter A. Kasteel. *Foreign trade* (1939): Imports, \$164,006,000 (80 percent oil); exports, \$183,508,000 (98 percent oil). *Agricultural products:* Aloes, beans, corn. *Manufactures:* Refined petroleum, straw hats. *Mineral products:* Lime phosphate, salt.

The territory is two groups of islands about 500 miles apart; one, about 40 mi. north of the Venezuelan coast consists of Curaçao (210 sq. mi.), Bonaire (95 sq. mi.) and Aruba (69 sq. mi.); the other, lying to the northeast, consists of 3 small islands with a total area of 29 sq. mi. The Dutch acquired it from Spain in 1634 and have since held it except for short intervals during the Napoleonic Wars. The U. S. accepted the invitation of the Netherlands government in Feb. 1942 to dispatch troops to Curaçao to cooperate in its defense. Administrative officials include the governor (appointed by the crown) and an elected council.

The backbone of Curaçao's economy is the refining of crude oil which comes from the adjacent Maracaibo fields in Venezuela. The refinery on Aruba, the world's largest, completed in 1945 the processing of the 1,000,000,000th barrel of oil since its opening in 1929. Aside from native Curaçaoans, there were on the island 7,511 English, 5,156 Dutch and 4,213 Venezuelans in 1943. Dutch is the official language but many inhabitants speak a patois known as Papiamentu, a mixture of Spanish, Dutch, African, and Portuguese elements. Only a small part of the trade is carried on with the homeland.

SURINAM. *Status:* Autonomous part of Netherlands state. *Capital:* Paramaribo (pop. 1944: 60,723). *Governor:* Dr. J. C. Brons. *Foreign trade* (1944): Exports, 6,-880,780 florins; imports, 15,645,344 florins

(1 florin=\$0.53). *Agricultural products:* Rice, sugar, coffee. *Minerals:* bauxite (1944: 689,800 tons), gold (1944: 177,943 grams). *Forest product:* Balata (about 275 tons annually).

Surinam lies in northeastern South America between British and French Guiana. It was received by the Dutch at the peace of Breda (1667) in exchange for New York and at that time included British Guiana which was seized by England in 1803 and formally ceded to her at the conclusion of the Napoleonic Wars. The United States and Brazil accepted the invitation of the Dutch Government on Nov. 24, 1941, to cooperate in the defense of the bauxite mines. The governor (appointed by the crown) is assisted by a partly elected legislative council.

Mining is the most important activity and only about 65,000 acres are under cultivation.

The heterogeneous population includes approximately 1,000 Dutch, 1,000 other Europeans, 2,400 Chinese, 19,000 Djukans (descendants of escaped slaves), 2,600 aboriginal Indians, 70,000 Negroes and Mulattoes, as well as 85,000 East Indians (British India and Java) laborers brought in after the abolition of slavery (1863) to work the sugar plantations.

The climate throughout is tropical and from its settled coastal plain, Surinam runs back to a virtually unexplored mountain and jungle area along the Brazilian border. Rivers are the chief means of interior travel.

Netherlands Indies (Part of Netherlands state)

(Nederlandsch-Indië)

Area: 735,268 square miles.

Population (est. 1940): 70,476,000.

Density per square mile: 95.8.

Governor General: Dr. Hubertus van Mook.

Principal cities (census 1930): Batavia, 439,184 (capital); Soerabaja, 341,675 (seaport, naval base); Semarang, 217,796 (seaport, central Java); Bandoeng, 166,815 (commercial center, west Java); Soerakarta, 165,484 (sugar, tobacco).

Monetary unit: Dutch guilder.

Racial stock (1930): Native except for 1,190,014 Chinese, 240,162 European (mostly Dutch and Eurasian), and 7,195 Japanese.

Languages: Javanese, Sundanese, Madurese, Malay, Dutch.

Religions: Mohammedian (predominant); Christian (about 2,500,000), Brahmin, Animism.

The Netherlands Indies, a group of islands with total area nearly two and half times that of Texas, constitute one of the world's richest colonial areas. The islands—Sumatra, Java, Madura, cent-

and southern Borneo, Celebes, western New Guinea and the Moluccas—would reach from New York to London if their extent was transposed to the Atlantic. They are more than fifty-seven times the size of the mother country, the Netherlands, and have great wealth in tin, rubber, spices, oil, quinine and copra.

In the 1st century A. D., most of the islands came under the influence of Hindu priests and traders who spread their culture and religion. Moslem invasions began in the 13th century and most of the area was Moslem by the 15th century. Portuguese traders arrived early in the 16th century but were ousted by the Dutch who showed up in about 1596. After Napoleon subjugated the Netherlands homeland in 1811, the British seized the islands and returned them to the Dutch in 1816. Political and economic reforms were introduced about 1870, and in 1903 the natives won a part in local affairs. In 1922 the islands were made an integral part of the Netherlands kingdom.

In World War II, Japanese troops began their attacks in early 1942, and took Batavia on March 5 and the big naval base at Soerabaja on March 10. Japanese military occupation with nominal native self-government continued until August of 1945, except in outlying parts of New Guinea and Borneo. About the time of the Japanese surrender, a self-styled Indonesian republic headed by Achmed Soekarno sprang up and took over effective control of parts of Sumatra and Java. Allied forces, mostly British Indian troops, moved in and fighting between them and the nationalists continued for many months. Meanwhile the nationalists and the Netherlands officials negotiated for a compromise on the status of the islands.

Before the Japanese occupation, a governor general appointed by the Dutch crown was the highest executive authority in the islands. He was assisted by a five-man advisory council which included two Indonesians. In internal affairs, the islands were self-governing, through the governor general and a legislature of sixty members, half of them Indonesians, more than half of them elected by indirect ballot. Indirect rule through native sultans was permitted in some outlying islands. Indonesians held many posts in local government.

The army, separate from that of the homeland, was 50,000 strong in 1942, including about 10,000 military police. Conscription for Indonesians was introduced in 1941. About a third of the regulars were European, mostly Dutch. Officers, with few exceptions, were Dutch. Naval forces consisted of units of the Royal Netherlands Navy, and also of a local navy.

There are more than 20,000 native schools

with more than 2,500,000 pupils, and 628 European-type schools with 150,000 students, but the illiteracy rate is high. There are institutions of higher learning at Batavia and Bandoeng, and numerous schools are maintained by Christian missionaries. The islands of Java and Madura, with only 7 percent of the area, have more than 67 percent of the population, and are among the most densely settled areas in the world. The natives, including about 137 races and tribes, are mainly of Malayan stock, with the Javanese the most advanced.

Agriculture engages about 70 percent of the adult males. Rich in a variety of crops, the islands produce about 31 percent of the world's copra, 37 percent of its rubber, 83 percent of its pepper, and nearly all of its quinine. The big-estate agriculture on Java and Sumatra is devoted mainly to export. The rest is subsistence agriculture. Rice is the staple food and chief crop, with 1939 production for Java and Madura alone about 6,912,517 tons. Sugar cane, rubber, tea, coffee, tobacco and quinine are the leading estate products. Corn, kapok, agava fiber, tapioca, spices, fruits and vegetables are also main crops. Livestock, important to the natives, included in 1939 a total of 3,246,918 carabaos, 4,576,602 cattle and 703,633 horses.

MAJOR AGRICULTURAL PRODUCTS, 1940

Crop*	Metric tons
Sugar cane	1,587,364
Rubber	546,021
Palm oil	241,702
Tea	81,986
Coffee	77,647
Tobacco	27,414
Quinine	16,371
Cacao	1,533

*Complete rice statistics are not available.

Industry, especially in Java, developed rapidly after 1930. In addition to industries connected with the processing of the rich natural products, there were established chemical works, textile and paper mills, soap factories, breweries, shipyards, a Goodyear tire and rubber plant and a General Motors assembly plant. In 1940 there were 5,469 manufacturing plants with 288,941 workers. Cottage industries, mainly on Java, also were important.

Exports in 1939 totaled \$394,479,000, including rubber, oil, sugar, cement, minerals, metals, sulphur and tea. Imports were \$250,460,000 including thread cordage and clothing, machinery, minerals and chemical products.

In 1940 there were 43,415 miles of road, mostly in Java and Sumatra; and 4,620 miles of railway, of which 3,387 were in Java and 1,233 in Sumatra. Regular steamship service is available among the islands,

and to Australia, South Africa and South America. In 1939 a total of 10,870 steamers, about half of them Dutch, with total tonnage of 12,456,654, cleared from island ports. The Royal Dutch Airline provided twice-a-week air service to Europe.

The last prewar budget, in 1942, anticipated revenue of 750,918,773 guilders, and expenditure of 813,802,815 guilders. The national debt in 1940 was \$763,593,868.

A backbone of high mountain ranges with many snow-capped peaks extends throughout the main islands of the archipelago. Earthquakes are frequent and there are many active volcanoes, ninety of them in Sumatra. Borneo and New Guinea are heavily forested with interiors that are difficult to penetrate. The climate throughout the group is equatorial and monsoonal, with little variation of temperature and rainfall averaging over 100 inches a year.

Oil is the principal mineral product of the Netherlands Indies. The fields, in Sumatra, east Borneo and east Java, held largely by the Royal Dutch Petroleum and Standard-Vacuum companies, produced 62,100,000 barrels in 1939, which was 3 percent of the world total. The islands' output of 30,100 tons of tin in 1939 amounted to 16 percent of world supply. Other 1939 mineral production included: coal, 1,934, 537 tons; gold, 89,069 ounces; bauxite, 254,265 tons; silver, 678,045 ounces; and asphalt, sulphur, diamonds and manganese.

Forests, covering a large part of the islands, yield such products as timber, rattan, bamboo, gum, wild rubber, gutta-percha and gutta jelutong and quinine. The principal timber is teak, found mostly in east Java; 1939 production was 10,876,949 cubic feet. Ebony, sandalwood and ironwood also are cut.

There are extensive fisheries among the islands. Shells, coral and tortoise shell are collected for export.

Nicaragua (Republic)

(República de Nicaragua)

Area: 57,143 square miles.

Population (est. 1943): 1,048,642.

Density per square mile: 18.3.

President: General Anastasio Somoza.

Principal cities (census 1940): Managua, 83,546 (capital); León, 30,573 (trading, RR center); Granada, 24,843 (trading); Masaya, 19,827 (coffee growing).

Monetary unit: Córdoba.

Racial stock (1930): Mestizo, 69%; White, 17%; Negro, 9%; Indian, 5%.

Language: Spanish.

Religion: Roman Catholic.

Nicaragua's Indians were converted to Catholicism by the Spaniards in 1522 and

the country was part of Spanish Guatemala until the general Central American revolution in 1821. Upon the dissolution of the Central American Union in 1838, the country established itself independently. A United States Naval force intervened in Nicaragua in 1909 after two American citizens had been executed, and a few U. S. Marines were kept in the country from 1912 to 1925. The Bryan-Chamorro Treaty of 1916 gave the United States an option on a canal route through Nicaragua, and Naval bases in the Bay of Fonseca on the Pacific coast and Corn Island on the Atlantic side. Disorder after the 1924 elections brought U. S. Marines on the run again but they were withdrawn gradually after the U. S.-supervised elections of 1928, although sporadic fighting continued between government troops and rebel forces under General Augusto Cesar Sandino. Juan B. Sacasa was elected president in the U. S.-supervised 1932 elections, but he was forced to resign in 1936. General Anastasio Somoza, elected president in December of 1936, restored political and economic stability. He was re-elected in 1939 and is now the virtual dictator.

The Constitution of 1939 provides a president, popularly elected for six years, and a two-house Congress—a 40-member Chamber of Deputies and a 15-member Senate—both elected for six years. Congress elects Supreme Court judges for six years, and judges of the five Courts of Appeal for four years. There are fifteen regional departments. Military service is voluntary. The Guardia Nacional, both an army and police force, numbers about 3,500. A Naval base built at the Pacific port of Corinto by the United States in World War II was turned over to Nicaragua in 1946. The country maintains a sea patrol against smuggling.

Although primary education is free and compulsory about 60 percent of the people are illiterate. There are three universities and several vocational schools. Primary schools in 1942 numbered 943 with a 63,380 enrollment; eleven secondary schools had 2,750 enrolled. Western Nicaragua, with about 75 percent of the population, is inhabited principally by mestizos of mixed Spanish and Indian blood, with some whites and many Indians. Negroes and Indians are dominant in eastern Nicaragua.

More than half of Nicaragua is still jungle-covered. Agriculture, the leading industry, cultivates only 10 percent of the land total. Coffee, 22,233,654 lbs. in 1945 is the chief crop and grows in the western part, which also produces sugar cane, cacao, corn, beans, rice and tobacco. Bananas lead in the eastern part, with cotton second. About 900,000 acres are devoted to livestock grazing. Except for some sugar refining, only locally consumed products are manufactured.

Exports in 1944 totaled \$15,412,455 against imports of \$10,279,451. In 1943 gold was about half of exports, and coffee about a quarter. Bananas normally are about a sixth. Other items are timber, cotton, cattle, sugar, ipecacuanha and cacao. Cotton textiles, machinery, food and varied products are imported. In 1943 the United States supplied 61 percent of the imports, and Mexico, 22 percent, while 89 percent of the exports went to the United States.

Good highways, long lacking, are now being constructed. Railway mileage, mostly nationalized and limited to the west, was only 258 miles in 1944. TACA and Pan American both supply air service. Corinto and San Juan del Sur, on the Pacific, are the chief ports. A canal route, giving both Nicaragua and Costa Rica water transport from the Caribbean to the Pacific, is planned using the San Juan River, which makes up about half the boundary between the two countries. Nicaragua's public debt in March, 1945, was estimated at \$5,378,000.

Largest but most thinly populated of the Central American nations, Nicaragua is mountainous in the west, with fertile valleys. A plateau slopes eastward toward the Caribbean. Two big lakes—Nicaragua, about 100 miles long, and Managua, about thirty-eight miles long, are connected by the Tipitapa River. The Pacific coast is bald and rocky; the Caribbean coast, swampy and indented and aptly called the "Mosquito Coast." The highlands have pleasant temperatures, while the coasts are hot and sultry, with the east coast pelted by up to 100 inches of rain a year.

Gold, 219,579 troy ozs. in 1944, has surpassed coffee as the most lucrative export. Silver production in 1944 was 254,457 troy ozs. One-third wooded, Nicaragua produces mahogany, rose wood, cedar and rubber. Dyewood exports in 1943 were 913,764 bd. ft., and lumber, 11,941,965 bd. ft.

Norway (Kingdom)

(Norge)

Area: 124,556 square miles.

Population (est. 1943): 3,050,000.

Density per square mile: 24.5.

Sovereign: King Haakon VII.

Prime Minister: Einar Gerhardsen.

Principal cities (est. 1938): Oslo, 275,000 (capital, chief port); Bergen, 106,500 (seaport, shipbuilding); (census 1930) Trondheim, 54,458 (seaport, timber, fish); Stavanger, 46,780 (seaport, fisheries).

Monetary unit: Krone.

Racial stock (1930): Norwegian, 98.7%; Swedish, .8%; Others, .5%.

Language: Norwegian.

Religions: Lutheran Christian (state), 96.8%; Others, 3.2%.

Emerging in 1945 from the harsh German occupation of World War II, Norway faced the problem of rebuilding a shattered economy and of replacing the 50 percent losses suffered by its merchant shipping fleet, once the fourth greatest in the world. To achieve these goals, the government launched a five-year plan with the goal of full recovery planned for 1950. The country, about the size of New Mexico and the most thinly-populated nation in Europe, leads the world in whaling and is one of the world leaders in fishing. It is very mountainous and forested and with a coast line slashed hundreds of times by deep fjords.

Norwegians, closely allied to Swedes and Danes, are of Teutonic origin. In the 7th and 8th Centuries Vikings from Norway constantly attacked the British Isles, and in the 9th Century many of them settled in what are now Eire and Normandy. Norway became a united kingdom in 872 under King Harald Haarfager. Christianity was introduced in the 10th Century by King Olaf I Under Haakon, from 1217-63 Norway reached a peak of power, ruling the Shetland and Orkney Islands, Iceland, Greenland and the Hebrides. In 1319 Norway and Sweden united under King Magnus, and in 1397 Denmark joined this union under Erik of Pomerania. In 1450 the triple bond gave way to a union in which Norway was closer to Denmark, but the Treaty of Kiel, in 1814 after the Napoleonic Wars, ceded Norway to Sweden. Norway protested, declared itself independent. Sweden invaded Norway and forced the issue, declaring Norway to recognize the king of Sweden but leaving Norway its own parliament, government, army, navy and customs.

After this union was dissolved in 1905, Prince Karl of Denmark was elected king of Norway by the Storting and he ascended the throne as Haakon VII. In World War I Norway was able to preserve its neutrality though it suffered greatly from the allied blockade and from the loss of many merchant ships. In World War II, Norway was invaded on April 8, 1940, by the Germans and resisted for sixty-two days before Nazi control was complete. On June 7, King Haakon and the government fled to London and established a government-in-exile, called the Nygaardsvold government and expanded in London to include all political parties.

QUISLING. Meanwhile, in Norway, a new word was born—quisling. It was derived from Major Vidkun Quisling, a Norwegian traitor who collaborated with the Germans, and who was Minister President of the German-sponsored occupation government. Quisling, who eventually was executed as a traitor in October of 1945, was responsible throughout his rule to Josef Terboven, the Nazi administrator of Norway.

Following the collapse of the Germans, the government returned to Norway on May 31, 1945, and King Haakon landed on June 7. The Nygaardsvold government resigned as was previously agreed upon. Paal Berg, leader of the resistance movement, was named by the king to form a cabinet but he failed because of Conservative and Communist opposition. Another resistance leader, Einar Gerhardsen, subsequently formed an interim coalition government. The general election held on Oct. 8, 1945, resulted in a Labor majority and Premier Gerhardsen formed an all-Labor government November 1, 1945.

SOVEREIGN. King Haakon VII, born August 3, 1872, second son of Frederick VIII of Denmark, married Princess Maud, (born 1869, died 1938) third daughter of Edward VII of England. They had one son—Olaf, Crown Prince, born July 2, 1903, who married Princess Märtha of Sweden (born 1901) on March 21, 1929. Their children: Princess Ragnhild Alexandria (born 1930), Princess Astrid (born 1932), Prince Harald (born 1937). King Haakon is the brother of Christian X of Denmark.

GOVERNMENT. Norway is a constitutional and hereditary monarchy with succession in the direct male line. The king's executive power is exercised by a council of state, or cabinet, consisting of the prime minister and at least seven other councilors. The 150 members of the Storting are popularly elected for a term of 4 years under proportional representation. When assembled, the Storting divides itself by election into two sections, the Lagting composed of one-fourth of the members (thirty-eight) and the Odelsting composed of the rest. The Storting has a predominant position in the government since the cabinet is responsible to it. Moreover, the king cannot dissolve it before the expiration of its term. There is universal suffrage for all citizens male or female over twenty-three years of age.

The judicial system consists of 101 courts of first instance, five regional courts of second instance and a supreme court composed of a president and four other justices.

The country is divided into twenty districts—eighteen counties (Sylker) and the cities of Oslo and Bergen. Other towns are formed into 65 communes. The chairmen of local councils of the 682 rural communes form county diets headed by the county governor who is appointed by the king.

The department of defense serves as a coordinating body for the army, navy and air force. The army is a national militia with compulsory service from 18 to 55. Liability for military training which lasts for eighty-four days begins at the age of 21. In 1939 there was a standing army of 15,000 and 120,000 reserves. The Navy on Dec. 31, 1945, had 7 destroyers and large

torpedo boats, 3 submarines, 4 corvettes, 3 minelayers, 2 old coast defense ships and a number of smaller craft. Units of the army and air force received training in Britain during the war, while naval vessels co-operated with the Royal Navy. Army units cooperating with the British assisted in freeing northern Norway prior to the German surrender in May 1945.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory and free from seven to fourteen. Illiteracy is almost unknown. In 1937-38 there were 357,719 students in the elementary schools, 31,127 students in the secondary schools and 15,033 students in continuation schools. The eleven schools of university rank had a combined enrollment of 4,998, of whom 4,118 attended the University of Oslo, founded in 1811. In addition, there are about 300 trade schools. The Norwegian language is closely akin to Danish and Swedish.

The endowed state religion to which the king must conform is Evangelical Lutheran. The king nominates the clergy of the established church, which takes a leading part in primary education. All other Christian religions are tolerated, but Jesuits are barred.

The average annual birth rate (1936-38) was 15.2. The average annual death rate was 10.3, the lowest in Scandinavia. From 1820 to 1920 there were over 800,000 emigrants of whom 96 percent went to the United States. The well-advanced social welfare program includes social security, introduced late in the 19th century, poor relief, care of mothers and children, schools for the blind, deaf and deformed, housing, training of social workers and old age pensions. Labor is protected by a number of acts which provide for vacations, arbitration of disputes, and unemployment, accident, and sickness insurance. The cooperative movement is well-organized.

Norway is largely mountainous and the land suitable for cultivation, estimated at less than 5 percent of the total area, consists of comparatively narrow strips in the deep narrow valleys and around fjords and lakes. Foodstuff production is insufficient to meet the domestic needs. Major crops are wheat, barley, oats, hay, potatoes and fodder. The country is more adapted to stock raising than crop growing. In 1939 there were 1,455,016 cattle, 1,743,802 sheep, 203,931 horses, and 248,916 goats. There were also 527,104 foxes bred for fur. The total value of agricultural products for 1938 was 384,207,000 kroner; of furs, 30,000,000 kroner. Fairly good crops were harvested in 1945 in spite of the fertilizer shortage. Livestock numbers were greatly below prewar level except for horses and sheep.

Raw materials produced in Norway form the basis of most of the manufactures. In

1938 there were 4,505 manufacturing establishments with 162,803 workers and an output valued at \$496,371,507. Leading industries were wood and paper with output valued at \$102,578,281; food including fish canning, \$64,018,750; machinery and metals, \$77,790,941; and electro-chemicals, \$57,659,350. Norway is a leading shipbuilding nation.

In 1939 imports were valued at \$317,321,000; exports, at \$187,561,000. Major exports, by percentage, were: paper and manufactures 21.5, fish 16.1, chemical fertilizers 7.4, aluminum 4.6, iron and steel 6.9, ships 4.4, and silver fox skins 3.4. Major imports were ships 10, non-electrical machinery and apparatus 4.9, coal 5.7, petroleum 3.8, electrical machinery and apparatus 3.3, iron and steel 6.5, wheat 2.2. Chief suppliers, by percentage, were: Germany 19, Britain 16.9, Sweden 10.2, United States 10.8 and Canada 4.2. Major customers, also by percentage, were: Britain 24.1, Germany 14.6, United States 10.4, Sweden 10.6 and France 4.4.

Norway is one of the greatest seafaring nations and her merchant fleet of 588 vessels of 2,768,993 gross tons in 1945 was among the largest in the world. Her long coast line and difficult inland transportation conditions makes coastal shipping especially important, while shipping revenues yield important invisible exports. Wartime losses amounting to 2,393,000 tons were the third highest among the United Nations. In 1939 there were 2,420 miles of railway, mostly nationalized, and 25,677 miles of highway. Railways are confined to the southern half of the country except for a line which connects Narvik in the north with the Swedish iron ore mines.

Governmental expenditures in 1939 were \$144,821,310; revenues, \$156,911,372; U. S. investments in Norway, \$65,200,000; total national debt, \$340,028,640.

NATURAL FEATURES AND RESOURCES. Nearly 70 percent of Norway is uninhabitable and covered by mountains, glaciers, moors and rivers. Its extreme length from the Skagerrak to North Cape—Europe's most northern point far above the Arctic Circle—is about 1,100 miles. Breadth averages sixty miles, with a maximum of 260 miles. The hundreds of deep fjords that cut up Norway's coast line give it an overall ocean front of more than 12,000 miles. Along the Swedish border are the rugged Kjolen Mountains, and northeast of Bergen are the highest of Norwegian mountains, with Galdhopiggen rising to 8,097 feet. Islands off the coast numbering almost 150,000 form a breakwater and make a safe coastal shipping channel. The Lofoten Islands, off the northwest coast, have an area of about 1,560 square miles and are a cod fishing center.

Norway has many rivers and lakes. Most of the rivers are short and swift with

numerous falls and are invaluable as a source of hydroelectric power. By increasing the development of such power, Norway hopes to free itself from the burden of importing coal, of which it has almost none. The principal river is the Glommen, rising near Trondheim, and flowing 400 miles south into Oslo Fjord.

The Gulf Stream affects the climate mildly. Summer temperatures range from about 50 degrees in the extreme north to 60.6 degrees at Oslo. Winter in Oslo runs an average of 24 degrees, against 10 degrees in the north. Norway is one of the lands of the midnight sun; in the extreme north for many weeks in the summer the sun never sets and in the same places for an equal time in the winter the sun does not rise. Rainfall is very heavy on the coast but decreases sharply inland.

Mineral resources are extensive, but coal deposits are entirely lacking except in Spitsbergen. The most important minerals (1938, in tons) were aluminum, 32,005; iron ore, 1,625,317; nickel ore, 37,721; pyrite ore, 1,132,917; zinc, 51,285; and copper ore, 38,696. Others were molybdenum ore, tungsten, tin and silver. Cheap electrical power makes possible the extraction of nitrogen from the air and the manufacture of potassium nitrate which competes as a fertilizer with the natural nitrate mined in Chile.

The forests are one of the chief natural resources. About 25 percent of the total area is covered with forests of which 70 percent is pine. The forest areas are largely in the south and southeast. Timber production in 1939 was 138,448,024 cubic feet and production of all forest products amounted to 229,323,557 cubic feet. Most of the timber produced is consumed in the paper and the pulp industry and only a small proportion is exported as timber.

Fishing is one of the principal industries, engaging as many as 100,000 persons annually. A large number of the best European food fisheries occur along the coast. Norwegians are also the world's leading whalers and took the lead in the development of pelagic (open sea) whaling, having 13 floating whale factories in 1939. Six were lost during World War II, but one has since been built, and one was obtained from the German merchant fleet.

MAJOR SEA PRODUCTS, 1938

Product	Amount	U. S. dollars
Codfish		
(dressed)	40,471 tons	882,411
Cod		
(dressed)	240,411 tons	8,757,533
Herring	763,119 tons	6,842,614
Sprat	16,380 tons	850,475
Whale oil	1,089,072 tons	10,956,436
Whales	13,197 number	
Others	113,216 tons	6,407,652
Total	2,262,669 tons*	\$34,699,721

*Excluding weight of whales and seals.

Outlying Territories

SPITSBERGEN (SVALBARD). This arctic archipelago with area of 25,000 sq. mi. lies about 350 miles north of Norway and consists of West Spitsbergen (15,200 sq. mi.), North-East Land (about 6,000 sq. mi.), Edge Island (2,500 sq. mi.), Barents Island (580 sq. mi.), and several small islands including Bear Island. It was probably discovered by Norwegians in 1194 A.D. and rediscovered by the Dutch navigator Barents in 1596. Despite diverse interests in and claims to the islands by numerous nations, the question of sovereignty was long unsolved. However, by a treaty signed with the nations interested on Feb. 9, 1920, Norwegian sovereignty was recognized and Norway declared the area a part of the kingdom Aug. 14, 1925. In the 18th and 19th centuries, it was a whaling center, but now the only important product is coal (1938: 691,000 tons). The population (1938-39), largely miners, numbered 2,210.

JAN MAYEN ISLAND. This arctic island (144 sq. mi.), lying between Greenland and the north of Norway, was discovered by Henry Hudson in 1607. It was annexed to Norway May 8, 1929. A Norwegian weather station was established in 1921, and during World War II a U. S. Navy weather station was maintained on the island. It is otherwise uninhabited.

OTHER TERRITORIES. Norway also exercises sovereignty over Bouvet Island (22 sq. mi.) in the South Atlantic, Peter I Island (94 sq. mi.) in the Antarctic Ocean, and that part of the Antarctic continent lying between 20 degrees west and 45 degrees east. All are uninhabited.

Outer Mongolia (Republic)

Area: 580,158 square miles.

Population (est. 1941): 850,000.

Density per square mile: 1.4.

Ruler: Marshal Choy Bal-san.

Principal city: Ulan Bator Khoto (Urga), 100,000 (capital).

Monetary unit: Tugherik.

Racial stock: Mongol except for about 100,000 Russians and 50,000 Chinese.

Language: Mongolian, Russian.

Religion: Lama-Buddhism.

Outer Mongolia, which is also known as the Mongolian People's Republic, is a Russian satellite that measures more than twice the area of Texas. It contains the original homeland of the historic Mongols whose power reached zenith in the 13th century under Kublai Khan. The area accepted Manchu rule in 1689 but after the fall of the Manchus and the Chinese Revolution of 1911, the northern Mongol princes expelled the Chinese officials and declared independence under the Living Buddha. In 1921 Soviet troops entered

the country, and facilitated the establishment of a republic by Mongolian revolutionaries in 1924 after the death of the last Living Buddha. China, meanwhile, continued to claim Outer Mongolia but was not able to back the claim with any strength. Outer Mongolia significantly signed a military alliance with Russia in 1936.

Under the Sino-Russian Treaty of 1945, China agreed to give up Outer Mongolia subject to a plebiscite. The subsequent vote was announced as 483,291 to 0, in favor of independence. On Jan. 5, 1946, China recognized Outer Mongolia's independence.

The government of the republic is modeled somewhat on the Russian pattern. The Great Huraldan (parliament) is elected by universal suffrage, meets once a year, and picks thirty members to act as an executive committee—the Little Huraldan, which in turn selects five members to administer the country. The only political party is the Mongol People's Revolutionary Party, formed in 1921 around a nucleus of young Soviet-trained Mongols. The army of several thousand is Russian-trained and equipped.

Outer Mongolia is under strong Soviet influence both politically and economically and a number of young Mongols are regularly sent to the U. S. S. R. for technical training. The capital, Ulan Bator Khoto, the former holy city of the Mongols, has a radio station, several newspapers published in Mongolian, high schools, a university, medical schools, and a military school with Soviet advisers. The present government has followed a policy of suppressing the tribal leaders and the lamas. The latter formerly comprised a considerable portion of the population.

The country is largely pastoral. There are few areas suitable for crop growing. Some millet, rye and wheat are produced. Most of the people are essentially nomadic or seminomadic and while some local development has taken place in the towns, flocks and herds remain the chief source of wealth. In 1942 there were 1,340,000 horses, 270,000 camels, 1,500,000 oxen, and 10,600,000 sheep. There are a few industrial enterprises including a machinery factory with an output valued at \$600,000 in 1938, a brick factory, and an electric power station all located at Ulan Bator Khoto. Foreign trade, a state monopoly, is carried on entirely with the Soviet Union. The only available trade statistics (1936) indicated exports valued at \$5,892,000 and imports valued at \$9,251,000. Leading exports are livestock, wool, hides, and animal hair, meat and furs. Principal imports are flour, cotton cloth, tea, petroleum, tobacco and clothing. Although the old caravan routes are still used and transpor-

tation is mainly by horse, camel or ox carts, a number of motorable roads exist (2,477 miles in 1938) including a highway from Ulan Bator Khoto to the Siberian border town of Kyakhta. An airline also functions between Ulan Bator Khoto and Ulan Ude in the Buryat Mongolian Autonomous S. S. R. which borders Mongolia on the north. No railways are known to exist but a line is projected between Ulan Bator Khoto and Kyakhta. Steamer transportation is available on the Orkhon and Selenga Rivers.

The productive regions of Outer Mongolia—a table land ranging from 3,000 to 5,000 feet of elevation—are in the north which is well drained by numerous rivers. The climate is continental, with hot summers and cold winters. Rainfall is light throughout the country, and almost negligible in the Gobi in the southeast.

Reserves of 500,000,000 tons of coal are said to exist in the Nalaikh field near Ulan Bator Khoto. Production in 1938 was 71,615 tons. Some gold is mined. Deposits of antimony, copper, iron ore, lead, graphite, mercury and silver also exist.

Panama (Republic)

(República de Panamá)

Area: 28,468 square miles.

Population (1940): 631,637.

Density per square mile: 22.1.

President: Enrique A. Jiménez (provisional).

Principal cities (1940): Panamá City, 111,893 (capital and chief port); Colón, 44,393 (chief Caribbean port); Ciudad David, 9,222 (bananas).

Monetary unit: Balboa.

Racial stock (1940): Mestizo, 65.34%; Negro, 13.31%; White, 11.07%; Indian, 9.53%.

Language: Spanish (official).

Religion: Roman Catholic, 93%; Protestant, 6%; Others, 1%.

Visited by Columbus in 1502 on his fourth voyage and explored by Balboa in 1513, Panama was in colonial days, the principal trans-shipment point for Spanish treasure and supplies to and from South and Central America. In 1821, when Central America revolted against Spain, Panama joined Colombia which already was independent. For the next eighty-two years, Panama kept trying to break away but Colombia held on. After U. S. proposals for canal rights over the narrow isthmus were rejected by the Colombia Senate, Panama proclaimed independence with U. S. backing. U. S. forces restrained Colombian intervention on the ground that the U. S.-Colombian treaty of 1846 gave the United States the right to keep the isthmus open.

For canal rights in perpetuity, the United States paid Panama \$10,000,000, and agreed

to pay \$250,000 (later \$430,000) each year. In exchange, the United States got the Canal Zone, a ten-mile-wide strip across the isthmus, and a considerable degree of influence in Panamanian affairs. Since 1903, Panama's government generally has been stable, with orderly presidential succession. Arnulfo Arias, a pro-Axis president, was ousted and exiled in 1941, and succeeded by Dr. Adolfo de la Guardia. Enrique A. Jiménez was elected provisional president by the National Assembly in 1945.

The National Assembly elected in May of 1945 was empowered to write a new constitution. It would replace the constitution suspended in 1941, under which the 32-member Assembly and the president were elected for six-year terms, with the president ineligible to succeed himself. The five judges of the Supreme Court were appointed by the president for ten years. Panama is divided into seven provinces. It has no army or navy, but a national police corps numbering about 2,000 men.

Although education is free and compulsory between seven and fifteen, illiteracy is very high in Panama. In 1942 there were 670 primary schools, enrollment 74,039; twenty-nine intermediate schools, enrollment 8,407; and a national university in Panama City with 857 students.

About five-eighths of Panama is unoccupied. A fourth of the population is in Colón and Panamá City, the oldest white settlement on the Pacific coast of the Americas. In the cities, the lower classes are Negro and Negroid, descendants of British West Indian laborers on the canal. Once literally a pest hole from coast to coast, Panama has been made into one of the healthiest of the tropics through U. S. sanitation methods introduced by Canal Zone officials.

Bananas are the main agricultural crop, and then cacao, tobacco, abaca, rubber, rice, coffee and sugar cane, all of which are exported as well as cattle, hides, gold and mother of pearl. Exports in 1943 totaled \$1,971,085 against imports of \$40,267,592. The Panama Canal is the country's biggest economic asset. Nearly 40 percent of the 1945 national income of \$129,126,000 was derived from the wages of Panamanians working in the Canal Zone, or from cash spent by the U. S. civilian and military personnel in the Zone.

Textiles and food make up about 50 percent of imports and machinery, about 20 percent. The United States normally supplies over half the imports, buys 90 percent of the exports.

The main railway is the U. S. Government-owned Panama Railway, forty-eight miles long, bridging the isthmus from Panamá City to Colón. All rail mileage in 1942 totaled 396; and highway mileage,

about 750 miles. The canal attracts to Panama the biggest shipping tonnage in Latin America, and shipping under Panamanian registry increased in World War II to 362 vessels of 1,342,072 gross tons.

Panama revenues for 1943-44 were \$54,-836,215 against expenses of \$47,756,506. The 1943 public debt was \$20,448,390.

Panama runs east to west for 420 miles from Costa Rica to Colombia, varies in width from 31 to 118 miles, with 477 miles of Caribbean coast and 767 on the Pacific. At the narrowest and lowest point, the canal bisects the country. Outlying islands number 630 in the Caribbean and 116 in the Pacific. Panama steps up from coastal lowlands, with extremely heavy rainfall, to upland valleys to plateaus covered by dense forest and a few mountain peaks, some of them volcanic, near the Costa Rican border. Its many rivers are not navigable, and its overall climate is distinctly tropical.

Minerals include gold, oil, copper and platinum toward the Colombian border, but transit shortcomings have hampered development. Forest resources include mahogany, copaiba, sarsaparilla and ipecacuanha. Pearl fishing is a minor industry, supplying coral, mother of pearl, pearls and tortoise shell.

Paraguay (Republic)

(República del Paraguay)

Area: 154,165 square miles.

Population (est. 1945): 1,108,040.

Density per square mile: 7.19.

President: Gen. Higinio Morínigo.

Principal cities (est. 1943): Asunción, 126,280 (capital); Villarrica, 30,176 (sugar, tobacco); Concepción, 16,007 (port, Paraguay R.); Encarnación, 15,610 (RR terminus).

Monetary unit: Guaraní.

Racial stock: Paraguayan, 97%; Indian, 3%.

Languages: Spanish (official); Guaraní.

Religion: Roman Catholic.

Paraguay, a landlocked country of cattle raising and lumbering, with a good river outlet to the South Atlantic, is three times the size of Georgia and, more often than not, is under the thumb of a dictator-president. In 1526 and again in 1529, Sebastian Cabot, the English explorer, looked over the area when he sailed up the Paraná and Paraguay Rivers. Domingo Martínez de Irala, a Spaniard, founded Asunción in 1537. From 1608 until their expulsion from the Spanish dominions in 1767, the Jesuits maintained an extensive establishment in the south and east of Paraguay. In 1811 Paraguay revolted from Spain and became a nominal republic under two consuls, one of whom, Dr. José Rodríguez Francia, ruled as absolute dictator until his death in

1840. His dictator successor, Carlos Antonio López, was succeeded in 1862 by his son, Francisco Solano López, under whose leadership Paraguay lost a good part of its population in a disastrous war with Argentina, Brazil and Uruguay. In the succeeding decades, Paraguay stumbled along toward economic progress, handicapped by revolution, intrigue and corrupt government. It remained neutral in World War I. Economic and financial exhaustion marked war with Bolivia, 1932-35, after which Paraguay was awarded three-fourths of the disputed Gran Chaco region in 1938.

General José Félix Estigarribia, elected president constitutionally in 1939, was killed a year later in a plane crash. General Higinio Morínigo, elected president by the Council of Ministers in 1940, was the only candidate in the 1943 election in which he won the term ending in 1948. Soon after, Morínigo seized dictatorial powers. In June, 1946 Morínigo used force to smash an attempted revolution and in July the pressure of the opposition forced him to restore the rights of political parties which had been outlawed for six years. At the same time he reorganized his cabinet to give it broader political representation, but despite these gestures, Morínigo's regime appeared far from steady.

Since the adoption of the 1940 constitution, Paraguay has been an authoritarian republic which elects every five years a president by popular vote and a one-house Congress, on a population basis. There also is a Council of State whose members are named by the government. The presidentially-appointed cabinet administers the government, and is required merely to inform the Congress and Council of its policy. For administration, Paraguay divides into a west section of three military regions, an east section of twelve departments. The army numbers more than 8,000. Military service in wartime is compulsory for two years. For patrolling the Paraguay River, the country's life line, there is a navy of 1,500 men with four gunboats. The army and air force are receiving instruction from a U. S. military mission. The budget share allotted to defense has been estimated at 39 to 53 percent.

Illiteracy is unofficially estimated at 60 percent, the fourth highest rate in South America. Education is free and supposedly compulsory. In 1945 there were 60,000 pupils attending 2,000 elementary schools. The University of Paraguay, founded in 1888, had 1,200 students, and there were several normal and agricultural schools. Roman Catholicism is the official religion but religious freedom is permitted.

Racially the Paraguayans are a homogeneous blend of Spanish, Portuguese and Italian with considerable Guaraní Indian blood. There are almost no Negroes but

35,000 to 50,000 wild Indians, mainly in the Chaco. The country is fully 90 percent bilingual with Guaraní dominating over Spanish (the official language) in the rural areas. Immigration, though small-scale, has increased recently; most of the immigrants, Mennonites and some Czech, Russian and German groups live in small colonies.

A well-favored land, Paraguay is predominately a cattle country, keeping about 4,000,000 head. Also, the soil is fertile and the climate suitable for subtropical crops. The chief export is cotton (acreage 750,000; est. 1945 output, 29,762 short tons); the staple food crop is mandioca. Other crops are rice, maize, yerba maté, tobacco, sugar, peanuts and fruits. Oil of petit-grain, an important perfume ingredient, is extracted from the leaves of the bitter orange. Aside from the production of canned meat and quebracho extract, constituting in 1943 38 percent of an industrial output of \$56,000,000, the manufactures of the country are slightly developed, but are showing steady growth.

Exports in 1944 were valued at \$13,700,000, and imports, \$12,957,000. The leading exports were canned beef 23 percent; quebracho extract 13 percent; raw cotton 12 percent; salt hides 11 percent; logs, vegetable oils, petit-grain, and yerba maté; imports were textiles, foodstuffs, manufactures of metals, vehicles and boats, minerals and fuels, machinery, paints, soaps and chemicals. Britain, the United States, and Argentina shared the exports, while Argentina was the chief supplier of imports, followed by the United States and Brazil.

River traffic, the principal means of communication, is largely monopolized by a British-controlled Argentine company; plans were announced in June, 1946, for the formation of a Paraguayan-owned river fleet. The Paraguay River is navigable for vessels of 12 ft. draft to Asunción, principal shipping point, and Concepción; and for smaller vessels for its entire length. The Alto Paraná is navigable for larger vessels for almost its whole length. Railway mileage in 1944 was 1,044; the chief line, British-owned, runs from Asunción to Encarnación, with connections to Buenos Aires. Highways, generally poor, totaled 3,760 miles in 1944. External air service is furnished by Pan American and an Argentine company; domestic service, by the nationalized Línea Aérea de Transporte Nacional (LATN).

The budget in 1944 totaled 20,564,300 guaraníes. The external debt in 1941 was 15,272,422 gold pesos (1 gold peso = 1.75 guaraníes); the internal debt, 24,001,134 gold pesos. American direct investments in 1940 were \$5,037,000; British investments in 1944, £2,842,150.

Eastern Paraguay, between the Paraná and Paraguay Rivers, is upland country with the thickest population settled on the grassy slope that inclines toward the Paraguay. The greater part of the Chaco region, to the west, is covered with marshes, lagoons, dense tropical forest and jungle. In the east, the temperature averages about 81 degrees in the summer and 64 in the winter. From Asunción, with an annual average greater than 50 inches, the rainfall decreases toward the west.

Paraguay's mineral deposits are small, except for manganese in the near-inaccessible northeast. In the western Chaco, a U. S. oil company has been exploring for oil. Forest resources are considerable, especially in the Chaco. Quebracho—the "axe-breaker"—a wood so heavy that it will not float—is the principal commercial tree. The wood is used for many things, from paving blocks to ox-cart wheels. Quebracho extract, 49,079 metric tons in 1942, is the chief product. Exports are limited by agreement with Argentina, also a heavy producer. Other important woods are cedar, curapay, lapacho, and urendey. Dyewoods and fibers are produced.

Peru (Republic)

(República del Perú)

Area: 482,133 square miles.

Population (est. 1943): 7,395,687.

Density per square mile: 15.3.

President: José Luis Bustamante y Rivero.

Principal cities (census 1940): Lima, 533,645 (capital); Callao, 84,438 (port of Lima); Arequipa, 79,185 (commercial center); Cusco, 45,158 (ancient Incan capital); Trujillo, 38,961 (mining).

Monetary unit: Sol.

Racial stock: White and Mestizo, 52.9%; Indian, 45.9%; Asiatic, .06%; Negro, .04%.

Languages: Spanish, Quéchua, Aymará (Indian).

Religion: Roman Catholic.

Peru, once part of the great Incan empire and later the major viceroyalty of Spanish South America, emerged from twenty years of dictatorship on July 28, 1945, with the inauguration of President José Luis Bustamante y Rivero after the first free election in many years. However, the change to a regime in which political prisoners were freed and the press was free to criticize, was soon tempered a bit by factional troubles within the government.

Today a nation more than three times the size of California, Peru was conquered in 1531-34 by Francisco Pizarro. On July 28, 1821, Peru declared independence but the Spanish were not finally defeated until the Battle of Ayacucho on Dec. 9, 1824. For a hundred years the course was rough.

Revolutions were frequent and a new war was fought with Spain in 1864-66. The dispute with Chile over Tacna and Arica was not finally settled until 1929, and war with Colombia over the Leticia Corridor was narrowly averted in 1931. Major economic development, mostly by foreign capital, began late in the last century. In World Wars I and II, Peru enjoyed cotton and copper booms. After political unrest, General Oscar Benavides became president in 1933 and vigorously set about suppressing popular rights and representative government. He was succeeded in 1939 by President Manuel Prado y Ugarteche.

Under the 1933 constitution, Peru elects by popular vote every six years a president, two vice-presidents and a bicameral congress—a Senate of 54 members and a Chamber of 156 members. The president is ineligible to succeed himself. The cabinet of nine ministers is presidentially appointed, while Supreme Court judges are elected by the congress from a presidential list. The central government names the executives of the twenty-one departments and two provinces.

Military service is compulsory at the age of eighteen. A U. S. military mission advises the armed forces, built around an army that has been strengthened and improved over its 1940 size of 14,551 men with 470 reserves. The air force, with 1,935 men and ninety planes in 1940, received fifty U. S. lend-lease craft in 1940. The 1945 navy had two old cruisers, two destroyers, four submarines, six river gunboats and smaller units. There are about 10,000 police and civil guards.

Peru, once the cultural center of Spanish South America, had a 1944 illiteracy rate of 58 percent. Education between seven and fourteen is free, compulsory and state-controlled. Primary schools numbered 8,059 in 1942 and enrolled 688,377, while seventy-four intermediate schools enrolled 99,325. Five universities had 5,033 attendance. The government directly controls all institutions of higher learning, including the University of San Marcos in Lima, the oldest in the Western Hemisphere, founded in 1551.

The Roman Catholic church is protected by the government and only its religious instruction is permitted in the schools. Juan Gualberto Guevara, Archbishop of Lima, became Peru's first cardinal at the last Papal consistory.

Most Peruvians are of mixed Spanish and Indian blood. The Indians come from three main stocks—Quechua, Colla and Chuncho. In 1939 Peru counted 63,805 foreigners, including 22,738 alien Japanese and 16,356 Chinese.

Compulsory social security, established in 1936, covers illness, maternity, dis-

ability, old age and death; benefits are steadily being extended.

Land under cultivation is estimated at about 3,617,000 acres or 12% of the total area, with over 80% of the population dependent upon agriculture. About $\frac{1}{4}$ of the cultivated area in the irrigated coastal valleys of the central region, is devoted to cotton, the most important crop (1944 production: 66,700 metric tons). Sugar, rice, tobacco and coffee are exported, while wheat, corn, potatoes, beans, barley and quinoa are subsistence crops. Stockraising, pursued in the Pacific highlands and the elevated parts of the Pacific slope, supplies most of the country's meat needs, as well as wool, hides, and skins for export. Llamas, used as beasts of burden, and vicuñas and alpacas, noted for their wool, are native to Peru. Livestock in 1945 was estimated at 13,750,000 sheep, 2,500,000 cattle and 490,000 horses.

Peru as a whole cannot be said to be industrialized. Aside from the copper smelters and oil refineries, the greatest progress has been made in the textile industry, which obtains its raw materials from domestic cotton and wool and from imported silk.

Imports in 1944 totaled 514,423,376 soles and exports, 547,335,952 soles. The chief suppliers were the United States (53.0%), Argentina, Brazil and Chile; the chief customers, the United States (35.5%), Chile, Britain and Australia. Principal imports by value were foodstuffs, machinery and motor vehicles, iron and steel products and chemicals and drugs; the chief exports, sugar, petroleum, copper and cotton.

Highway mileage in 1945 totaled 18,480 miles of which 7,260 were hard-surfaced; the Pan-American highway had a total Peruvian length of 1,818 mi. Railway mileage was 2,764, much of it over difficult territory. Panagra, Cia. de Aviación Faucett and the nationalized Línea Aérea Nacional supply domestic and international air service. Callao is by far the most important port. There are over 5,400 miles of navigable tributaries of the Amazon in eastern Peru; the chief Amazon port is Iquitos, 2,653 mi. from the Atlantic. The telephone system in 1942 had 36,344 telephones; and there were 70,000 radio sets in 1941.

The 1946 budget totaled 648,703,447 soles. The public debt in June, 1944, totaled 1,303,800,000 soles. Foreign capital has played a large part in Peruvian economic development. British investments in 1944 amounted to £28,769,244; American direct investments in 1940, \$81,597,000. The government in 1945 decreed the liquidation of German banking interests and the sale of Axis expropriated property, the proceeds to be used for the repatriation of Peruvian bonds.

The Andes Mountains divide Peru into

three sharply different zones. To the west is the arid coast, a near desert for fifty to a hundred miles inland, and 1,400 miles long. The mountain area, with peaks over 20,000 feet high, lofty plateaus and deep valleys, lies centrally. Beyond the mountains to the east is the heavily forested slope leading to the Amazonian plains. The climate ranges from tropical in the eastern lowland to arctic among the snow-capped peaks.

Peru has vast mineral resources—it is third in world silver production and mines 30 percent of the world's vanadium—but still mining is second to agriculture, and nearly all of it in the hands of foreign capital. Petroleum and copper are the most important, with the latter controlled by the American-owned Cerro de Pasco Corporation, which also accounts for much of the gold and silver output.

PRINCIPAL MINERAL PRODUCTS OF PERU, 1943 AND 1944

Product	1943	1944
Petroleum (bbl)	14,600,000	14,385,900
Copper		
(metric tons)	31,830	32,700
Gold (oz)	230,000	175,000
Lead (metric tons)	49,000	52,500
Silver (oz)	15,150,000	15,830,000
Zinc (metric tons)	50,800
Vanadium		
(short tons)	942	568

Forest products include rubber (1943 exports—969 metric tons) and balata, raw quinine (1945 exports, all U. S.-bought—849,160 kilograms); also vegetable ivory, mahogany, cedar, dye woods and coco, the source of cocaine. An important industry on the outlying islands is the gathering of guano (bird excrement), a valuable fertilizer used almost entirely domestically.

The Philippines (Republic)

Area: 114,400 square miles.

Population (est. 1940): 16,356,000.

Density per square mile: 142.9.

President: Manuel A. Roxas.

Principal cities (census 1939): Manila, 623,492 (capital, chief port); Cebu, 146,817 (seaport); Zamboanga, 131,455 (seaport); Davao, 95,546 (seaport); Iloilo, 90,480 (seaport); Ormoc, 77,349 (seaport).

Monetary unit: Peso.

Racial stock (by nationality, 1939): Filipino except for 117,461 Chinese, 29,262 Japanese, 8,739 Americans and 11,515 others.

Languages: Tagalog, English, Bisayan, Spanish.

Religions (census 1939): Roman Catholic, 78.7%; Aglipayan (Independent Philippine Catholic), 9.8%; Mohammedan, 4.2%; Protestant, 2.3%; Others, 5%.

Fernando Magellan, the Portuguese navigator in the service of Spain, discovered the Philippines in 1521 and 21 years later a Spanish exploration party named the group of islands the "Philippines" in honor of Prince Philip, later Philip II of Spain. Spain retained possession of the islands for the next 350 years, although the Moros in the southern islands continued to harass the Spanish troops until 1850. The Philippines were ceded to the United States by the Treaty of Paris ending the Spanish-American War, but the Filipinos led by Emilio Aguinaldo declared their independence (Sept. 29, 1898) and continued guerrilla warfare against U. S. troops until the capture of Aguinaldo in March, 1901. By July, 1902, peace was established in all parts of the islands except those inhabited by Moro tribes. The first civilian governor-general was William Howard Taft (1901-04). The Jones Law (1916) provided for the establishment of a Philippine legislature composed of an elective Senate and House of Representatives. The Tydings-McDuffie Act, signed March 24, 1934, and ratified by the Philippine legislature on May 1, provided for complete Philippine independence in 1946. Under a constitution approved by the people of the Philippines May 14, 1935, the Commonwealth of the Philippines was inaugurated Nov. 15, 1935, under the presidency of Manuel Quezon, who was re-elected in 1941.

The Philippines were invaded by the Japanese troops Dec. 8, 1941, and after the fall of Bataan and Corregidor, President Quezon and his government fled to Washington. The Japanese-sponsored "Philippine Republic" received little sympathy from most Filipinos. U. S. forces led by Gen. Douglas MacArthur re-invaded the islands in October, 1944, and after the liberation of Manila (Feb. 1945), Sergio Osmeña, who had succeeded to the presidency on the death of Quezon (Aug. 1, 1944), re-established his government in the Philippines.

Brig. Gen. Manuel A. Roxas became president, defeating Osmeña in the elections of April, 1946, and was first head of the new independent republic which came into existence on July 4, 1946.

Under the Constitution of 1935 (as amended in 1939), the Philippines has a republican form of government based on that of the United States. Executive power is exercised by the president, popularly elected for a 4-year term, who is assisted by a cabinet appointed by him. The popularly elected Congress has two houses—the Senate with 24 members and the House of Representatives with 120 members. The judiciary consists of the Supreme Court (7 justices), the Court of Appeals (15 justices), courts of first instance, municipal courts and justices of the peace. Of

the 48 provinces, 39 are regularly constituted with elective governors. Five governors of the nine specially organized provinces are elected and the other four are appointed.

In March, 1940, there were 12,057 public schools with a primary enrollment of 1,572,639; intermediate, 277,574; secondary, 90,579; collegiate, 3,777; total 1,944,569. The 439 private schools had a total enrollment of 149,491. The University of the Philippines was authorized by an act of the Philippine legislature (1908). Private non-sectarian institutions include the University of Manila, National University and the Far Eastern College. Of the 8,466,493 persons reported as engaged in gainful occupations in 1939, 3,912,580 were listed as literate and 4,546,496 as illiterate; 7,417 were unreported. Fewer than half of the children of school age attended school in 1940.

Agriculture is the chief industry. The last census (1939) showed 1,634,726 farms with a total area of 16,531,716 acres (about 22 percent of total area), of which 9,769,669 acres were under cultivation. The average size of the farms was 10.11 acres, but there were many large plantations. Rice (palay), the staple native food cereal, occupied 43.3 percent of the cultivated area in 1938, but production is insufficient for home consumption. The Philippines normally produce about one-half of the world copra supply and a large proportion of the abaca supply; they are also a leading source of sugar and its products which form the chief export.

Other crops include sisal, kapok, cotton, coffee, rubber, cacao, citrus fruits and bananas. Livestock in 1939 included carabaos, the farmers' all-purpose animal, 2,918,730 (reduced by over 50 percent in 1946); cattle, 1,349,264; horses, 340,432; swine, 4,348,515; and goats, 402,173.

MAJOR AGRICULTURAL CROPS 1939

Crop	Acreage*	Tons
Abaca	1,254,760	158,903
Copra	1,588,210	556,023
Corn	1,736,410	522,321
Rice	4,722,640	2,012,777
Sugar	563,160	1,105,989
Tobacco	185,250	35,407

*1938 acreage.

Industry had made some progress prior to World War II, but private manufactures were still in their infancy. In addition, industrial establishments suffered serious damage as a result of the Japanese invasion and occupation. A start has been made in sugar, rope, cigar and cigarette, and furniture factories, lumber and rice mills, and modern factories producing beverages, perfumes, cosmetics and other consumer goods. Preparation of fine embroideries is

an important home industry. In 1938, 49,954,182 gallons of molasses were produced, and there were 92 cigar and cigarette factories, 70 beverage factories, three textile factories, and 2,441 food processing plants.

Exports (1939-40) were valued at \$113,412,000 of which 74.8 percent went to the U. S., 6.9 percent to Japan, 3.3 percent to the United Kingdom, and 2.1 percent to France. Imports totaled \$144,586,000, of which 74.3 percent came from the U. S., 4.6 percent from Japan, 2.5 percent from the Netherlands Indies, and 2.0 percent from China. Leading exports were: sugar, 34.8 percent (all to U. S.); copra, 11.9 percent; coconut oil, 9.1 percent; abaca (manila hemp), 11 percent; and tobacco products, 5.3 percent. Leading imports included iron and steel manufactures, 16.3 percent; cotton goods, 14.2 percent; mineral oils, 7.7 percent; tobacco products, 6.5 percent; and automobiles and parts, 5.4 percent.

The 1946-47 budget for the new republic as estimated by President Roxas, called for expenditures of \$135,000,000, with revenues amounting to only \$20,000,000.

Transportation facilities suffered especially severe damage during World War II. The interisland trade—extremely important because of the makeup of the archipelago—was served in 1937 by 2,907 vessels licensed for domestic trade, 1,545 for coastwise trade and 1,362 for bay and river traffic; only a few vessels were in operation in 1946. The port of Manila has ample facilities for ocean-going vessels. Railway mileage (1939) totaled 844, most of which was on Luzon. Highways totaled 10,920 miles, of which 6,127 were improved.

The Philippines are an archipelago of approximately 7,083 islands lying about 600 miles off the SE coast of Asia and bounded on the west and north by the China Sea, east by the Pacific, and south by the Celebes Sea. They extend north and south about 1,150 miles and east and west about 688 miles. The northernmost island, Luzon, is 65 miles from Formosa, while the southernmost is 30 miles east of Borneo. Only 466 of the islands have an area of over one square mile and only 2,441 have names. The largest islands are Luzon in the north (40,814 square miles), Mindanao in the south (36,906 square miles), Samar (5,124 square miles), Negros (4,903 square miles), and Palawan (4,500 square miles). The islands are the tops of an irregular submerged mountain chain which is largely of volcanic origin. The plains lying among the mountains are the most densely populated portions of the islands except in Cebu, where the people live mostly on the coastal plain. Extensive drainage systems are provided by the numerous short rivers including the Pasig in Luzon, also important commercially, and the Rio Grande and Agusan in Mindanao. There are also several large lakes.

The climate is warm throughout the year with only slight variations. During the season of the northeast trade winds (Nov.-June), the eastern coasts have a heavy rainfall, but the western coasts and interior remain dry. The rainy season begins in July and continues through October, when the southwest monsoon prevails. Occasional earth tremors and seasonal typhoons often cause severe damage.

The Philippines possess large but relatively undeveloped mineral resources. Most important is gold, production of which rose from 160,620 ounces in 1929 to 999,408 ounces valued at \$34,979,280 in 1939. Most of the mines in production were lode mines. Also important are: silver (1939: 1,247,541 ounces), iron ore (1,272,868 tons), copper ore (5,732 tons), chromite, manganese ore, lead and zinc. Petroleum formations are also known to exist.

The forest area is estimated at more than 43,700,000 acres (about 58 percent of the total area), not including 3,200,000 acres covered with cogón grass, fit for grazing. About 97.5 percent of the total forest area is government-owned. The volume of standing commercial hardwoods and softwoods was estimated at 464,740,000,000 board feet in 1941. In 1938, 2,393,510 cu.m. of lumber were cut; there were 141 sawmills and seven machine logging outfits with Americans holding the largest investments. Minor forest products include charcoal, tanbarks, cutch, dye barks, manilla copal and elemi, oleoresins, rattan, diliman and kamagsa.

Of the approximately 1,900 different species of fish, only about 100 kinds are marketed, although a majority are edible. The most common are milkfish, mackerel, snappers, sea bass, porgies, pompanos, millets, anchovies, barracudas, tunas, bonitos and eels. Fish exports are chiefly canned tunas. Other marine products include coral, pearls, shells and sponges.

Poland (Republic)

(Rzeczpospolita Polska)

Area (est. 1945): 120,782 square miles.

Population (est. 1946): 23,622,334.

Density per square mile: 195.3.

President: Boleslaw Bierut (provisional).

Premier: Edward Osóbka-Morawski.

Principal cities (est. 1946): Łódź, 496,000 (industrial center); Warsaw, 476,000 (capital); Kraków, 300,000 (trading center); Gdansk (Danzig), 118,000 (seaport).

Monetary unit: Złoty.

Racial stock: Polish, German.

Languages: See Racial stock.

Religions: Roman Catholic, Jewish, Protestant.

HISTORY. Poland was very early a Christian country. Early in the 11th century the

Polish king, Boleslaus the Brave, ruled over Bohemia, Saxony and Moravia. His kingdom fell before the Tatars who were driven back by two orders of German knights—the Knights of the Sword and the Teutonic Knights—who spread Christianity along the shore of the Baltic. They created a state which included the district of Kulm and part of Poland, subject to the Holy Roman Empire. In 1259 Poland was invaded again by the Mongols, but the country recovered under King Wladislaus I (1306-1333) who defeated the Teutonic Knights. Poland reached its greatest height in the middle of the 15th century. The decline began at the end of the century when the nobles usurped the power of the people and soon reduced the country to anarchy. In 1573 Henry of Valois, duke of Anjou, was elected king by the nobles but he reigned for only 13 months. For 100 years the nobles fought among themselves and occasionally against Turks, Cossacks and Tatars. In 1683 John Sobieski defeated the Turks before Vienna.

By the middle of the 18th century Poland was completely decadent and utterly disorganized. The first partition of the country was carried out in 1772 by Prussia, Russia and Austria; the second in 1793 and a third in 1795. For over 100 years the Poles had no nation of their own and, when World War I broke out, Poles were fighting on both sides. By the end of 1915 all of Poland had been occupied by Austro-German forces and on Nov. 5, 1916 the German and Austrian Emperors proclaimed Poland's independence but did not define its boundaries. The independence of Poland was formally proclaimed Nov. 9, 1918. On Nov. 10, 1918 Marshal Josef Pilsudski returned to Poland and was confirmed in office as President. Ignace Paderewski became the first premier in 1919. Poland's independence was recognized by the Treaty of Versailles, June 28, 1919. Russia attacked Poland in 1920 but the Poles, under Marshal Pilsudski aided by the French, succeeded in defeating them. A Franco-Polish treaty was concluded in Paris on Feb. 19, 1921. On May 12, 1926 Marshal Pilsudski seized power in a coup d'état and ruled the country through his office as premier until his death on May 12, 1935, when he was succeeded by Marshal Smigly-Rydz.

A 10-year non-aggression pact had been signed with Germany Jan. 26, 1934 but on Sept. 1, 1939, Hitler, alleging Polish mistreatment of Germans in Poland, attacked the country. Russian troops invaded from the east Sept. 17, 1939 and on Sept. 28 a German-Russian treaty was signed dividing Poland between Russia and Germany. Before leaving Poland, President Moscicki resigned, designating as his successor W. Raczekiewicz; the latter formed a government-in-exile in France with Gen.

Sikorski as premier. All of Poland was occupied by Germany after the latter's attack on the Soviet Union in June 1941. On July 30, 1941 Poland concluded an agreement with the U. S. S. R. declaring null and void the German-Soviet agreements effected after Sept. 1, 1939. On Aug. 14, 1941 a Polish-Soviet military agreement was concluded, providing for the formation of a Polish army in Russia, and on Dec. 4, 1941, a Polish-Soviet declaration of friendship and mutual assistance was signed.

In July 1944 a Communist-dominated Polish Committee for National Liberation received Soviet recognition. Moving to Lublin after the latter's liberation, it proclaimed itself the Provisional Government of Poland on December 31, 1944. After almost six months' negotiations, some of the former members of the Polish Government in London and the Lublin Government were united to form the Polish Government of National Unity on June 28, 1945. On July 5, 1945 the British and U. S. governments recognized this government and withdrew recognition from the London government. A treaty of friendship, mutual assistance and postwar collaboration was signed between the Lublin Government and the Soviet Union on April 21, 1945.

GOVERNMENT. The National Council of the Homeland (*Rada Narodowa*), an irregular body of 100 members created in Poland during World War II, acts as Poland's legislative body pending the holding of general elections. Its chairman carries on the functions of President of Poland until that time. The Council has accepted the principles of the Constitution of Mar. 17, 1921, but in a plebiscite held June 30, 1946, the Polish people voted to abolish the Senate, or upper house of Parliament, provided for in the Constitution. The functions of the National Council are limited for the most part to the approval of legislation drafted by the Council of Ministers (Cabinet) who exercise the executive power.

On Aug. 2, 1945, in Berlin, Prime Minister Attlee, President Truman and Generalissimo Stalin published a statement establishing a new *de facto* western frontier for Poland along the rivers Oder and Lausitzer Neisse, pending the signing of the final peace treaty. On August 16 the Soviet Union and Poland signed a treaty on the delimitation of the Soviet-Polish frontier under which the U. S. S. R. ceded to Poland two small areas east of the so-called Curzon Line, one about 50 miles northeast of Lwów and one in the Bialowieza forest. Under these agreements Poland was shifted westward. In the east it lost 69,860 square miles with 10,772,000 inhabitants; in the west it stood to gain 38,986 square miles with a prewar population of 8,621,000. The former German territories have been organ-

ized into the following voivodships (provinces)—Mazuria, capital: Olsztyn (Allenstein); Upper Silesia, capital: Opole (Oppeln); Lower Silesia, capital: Wrocław (Breslau); Danzig (Gdansk); and Western Pomerania, capital: Pila.

SOCIAL AND ECONOMIC CONDITIONS. Definitive statistics on postwar education are not available. Education prior to World War II was free, and elementary education compulsory. In 1938-39 there were 28,881 elementary schools with 4,953,000 pupils, 789 secondary schools with 234,200 pupils, 74 teachers' colleges with 6,600 pupils, 764 professional schools with 106,415 pupils. Universities in postwar Poland include the Jagiellon University in Kraków (founded 1364), the Pilsudski University in Warsaw (1817), and the University of Poznań (1919).

Poland remains essentially an agricultural country; the areas under *de facto* Polish administration in the west accounted for 25 percent of Germany's prewar food production. Farming conditions continued to be disturbed in 1946, with the peasants living on a subsistence basis and the greatly reduced city populations near the lower margin of existence. Accurate agricultural statistics were not available. Prewar Poland's chief agricultural products, with 1938 yield, included: rye, 7,995,423 tons; oats, 2,928,260 tons; wheat, 2,394,085 tons; barley, 1,511,584 tons; potatoes, 38,093,504 tons; and sugar beets, 3,485,914 tons. Other crops included corn, flax, hemp, millet, peas, and rape and rape seed. Livestock (1939) included 10,600,000 cattle, 3,900,000 horses, 3,200,000 sheep, and 7,700,000 swine.

Poland's industrial facilities, although severely damaged during World War II, were not greatly affected by territorial concessions to the U. S. S. R., with the exception of the Lwów area. On the other hand, important industrial areas, especially Silesia and Stettin, are located in the German territories under *de facto* Polish administration. In 1936 Poland had 22,993 larger industrial establishments with 707,113 workers. The most important by value of output were: textiles, 2,293 plants with an output of \$242,034,125; wood and paper, 3,327 with an output of \$77,236,500; metal, 1,130 with an output of \$65,703,873; and chemical, 855 with an output of \$70,271,625. Important industrial areas include Silesia and Kielce (iron and steel); Łódź, Białystok and Bielsko (textiles); Warsaw, Łódź, Bydgoszcz and Poznań (metallurgical industry). Industrial production (1938) included: pig iron, 880,000 tons; steel, 1,441,000 tons; yarn, 138,100 tons (1937) and textile fabrics, 95,300 tons (1937).

Poland's foreign trade in the immediate prewar period was marked by a weakening of the former dominance by European

countries and Germany in particular, accompanied by an expansion of trade in other parts of the world. Exports (1938) were valued at \$223,437,000 of which Germany received 24.1 percent, Britain 18.2 percent, Sweden 6 percent, and Italy 5.5 percent. Imports were valued at \$245,135,000 of which Germany supplied 23.0 percent, United States 12.2 percent, Britain 11.4 percent, and Belgium 4.1 percent. Leading exports were: coal and coke 19.1 percent (13,168,000 tons); timber, 17.1 percent; metals and metal goods, 10.8 percent; and bacon, 4.0 percent. Imports included machinery 14.8 percent, metals and metal goods 14.1 percent, cotton 9.0 percent and wool 7.4 percent. Postwar Poland is firmly within the Soviet trade orbit; most of her trade agreements involve the exchange of coal for manufactured goods and foodstuffs.

On July 1, 1939 the Polish merchant marine numbered 63 vessels with a tonnage of 121,630 gross tons. The principal ports, both severely damaged, are Gdynia, with one of the largest harbors in Europe (1938 turnover: 9,173,438 tons), and Gdansk (Danzig) (1938 turnover: 7,127,200 tons). Transportation facilities and rolling stock suffered heavy damage during World War II—a factor hampering Poland's economic recovery in 1946. Definitive railway and highway statistics for postwar Poland were not available in 1946.

NATURAL FEATURES AND RESOURCES. Most of Poland is a plain with no natural boundaries except the Carpathian Mountains on the south and the Oder and Neisse Rivers on the west. Pomerania is traversed by a range of low hills, while south of Danzig is a maze of marshes, sand dunes and muddy lakes which extend into Polish East Prussia (Mazuria). The central Polish plain, 300 to 450 feet above sea level and intersected by great rivers, lies south of the flat country along the Baltic shore. Southern Poland and Silesia is a hilly region, while on the right bank of the Vistula is the plateau of Lublin.

The basin of the Vistula River comprises what is now north central and southeastern Poland. The river, the most important in Poland, rises in the western Beskids on the Czechoslovak border, flowing in a great semicircle east and then northwest before flowing north to the Baltic. Poland's other important river is the Oder, which flows northwest through Silesia and then forms the *de facto* western boundary to the Baltic.

Poland's climate is dependent upon her proximity to the Baltic and the Carpathian Mountains. Abundant rainfall (annual average: 22.8 inches) is caused by the predominating western oceanic winds. Snow is not thick, but temperatures below zero are not uncommon, and the rivers are

generally icebound for two and a half to three months.

The acquisition of large coal deposits in German Silesia (estimated at over 5,000,000,000 tons) combined with already large reserves in the southwestern region make Poland one of the world's leading coal producers. About one-third of the 1938 output (42,002,039 tons) was exported. Iron ore deposits are located in the Kielce and Radom districts (1938 output: 961,857 tons) and in German Silesia. Zinc and lead ores are located chiefly in Upper Silesia and the voivodships of Kielce and Krakow. Lead production (1938) was 22,016 tons of zinc, 119,159 tons. Poland's principal oil producing areas, Boryslav-Drohobych, were in the territory ceded to the Soviet Union; 1946 production was not expected to exceed 120,000 metric tons as compared to 500,000 prior to World War II. Among other deposits Poland possesses copper, sulphur, chalk, clay, kaolin, marble and granite.

Forests covered 24 percent of prewar Poland, but important forest resources are located in the territory ceded to the Soviet Union. Pine trees formed 65 percent of the forests and predominate in the western and central provinces. Timber produced in 1937 totaled 190,699,758 cubic feet, and 205,000 tons of paper were produced in 1938.

The fish catch (1937) totaled 15,443 tons valued at \$970,239, of which herring accounted for over 50 percent.

Portugal (Republic)

(República Portuguesa)

Area: 35,424 square miles.

Population (est. 1944): 8,043,315

Density per square mile: 217.6.

President: Gen. António Oscar de Fragoso Carmona.

Premier: Dr. António de Oliveira Salazar.

Principal cities (census 1940): Lisbon (Lisboa), 709,179 (capital, seaport); Pôrto (Oporto), 262,309 (seaport, port wine); Funchal (in Madeira Islands), 48,493 (Madeira wine); Coimbra, 35,437 (university); Setúbal, 35,071 (seaport, sardines).

Monetary unit: Escudo.

Racial stock: Portuguese.

Language: Portuguese.

Religion: Roman Catholic.

Rolling and rugged Portugal is about the size of Indiana and, thanks to the days when its sailors and explorers were among the world's most venturesome, it has a colonial empire twenty-six times the area of the homeland. A traditional ally of Britain, Portugal remained neutral in World War II but did give the Allies the right to use vital island bases in the At-

lantic. Politically, Portugal is a virtual dictatorship, not a sinister and evil one as were Germany and Italy, but still a nation where the opposition is officially suppressed and many phases of the national life are strictly regimented.

Portugal was part of Spain until it won independence in 1143 with Alfonso I as the first king. During the reign of King John I, from 1385 to 1433, a great commercial empire was built, largely through the exploratory hobby of the king's son, Prince Henry the Navigator. Bartholomew Diaz explored Africa's west coast and reached the Cape of Good Hope in 1488. Vasco da Gama circled the Cape in 1497-99 and discovered the water route to India. Portugal's empire reached the crest in 1540 when it extended along the coast of Brazil, east and west Africa, Malabar, Ceylon, Persia, Indo-China and Malaya.

In 1580 Spain and Portugal were joined in a personal union under Philip II of Spain. Portugal revolted in 1640 and set up a new dynasty under John IV, Duke of Braganza, but the country never recovered its position as one of Europe's major powers. In 1806, when Portugal refused to obey Napoleon's orders that all continental ports be closed to British ships, Napoleon's forces invaded the country but were ousted in 1811 by British and Portuguese forces under the Duke of Wellington. The royal family had fled to Brazil in 1807 but following an uprising in 1820, the king, John VI, returned to Portugal in 1821. Brazil declared its independence in 1822 and John's son, Pedro, became emperor as Pedro I. In 1833 Pedro I who had abdicated as emperor of Brazil in 1831, returned to Europe and led an uprising with British assistance, in favor of his infant daughter Maria II, displacing his younger brother, Miguel I, who had been proclaimed king in 1828. The descendants of Maria's marriage with Ferdinand of Saxe-Coburg ruled Portugal until 1910 when King Manoel II, son of King Carlos I who was assassinated in 1908, was forced into exile by a republican revolt. On June 19, 1911 the monarchy was abolished, and a republican constitution introduced. Portugal proclaimed her loyalty to the British alliance upon the outbreak of World War I and Portuguese troops fought both in Africa and on the Western Front. There was much internal political instability during the war and, immediately thereafter and in the course of a political struggle in 1921, the premier, Dr. Antonio Granjo, was assassinated. On May 30, 1926 a revolution led by the Army deposed the President and set up a military dictatorship. General António Carmona became premier and acting president Nov. 29, 1926 and was elected president on March 25, 1928. Dr. António de Oliveira Salazar, who was appointed finance minister in 1928, founded the organization known as the National

Union in 1930 and has been premier and dictator since 1932. His regime, while admittedly opposed to liberal or democratic principles, has brought political and economic stability to Portugal. President Carmona was re-elected in 1935 and in 1942. The general election for members of the National Assembly held on Nov. 18, 1945 was boycotted by the opposition and the National Union was continued in office unopposed.

GOVERNMENT. Under the constitution of 1933 Portugal is a corporative republic. The president is popularly elected for a term of 7 years; the national assembly of 120 members, for a term of 4 years. There is also a corporative chamber which handles economic, social and some legislative matters; its 97 members are representatives of local autarchies and of the several branches of social activities—administrative, moral, cultural and economic. The assembly theoretically may overrule the president's veto by two-thirds vote. The president appoints the premier who in turn selects the cabinet which is not responsible to the national assembly.

There is a supreme court in Lisbon and courts of appeal at Lisbon, Coimbra, and Oporto; and a number of lower courts.

The republic is divided for administration into 18 continental districts and 4 island districts in the Azores and Madeira, which are integral parts of the republic.

Military service is compulsory; the initial training period is 6 years, but not all those liable for duty are called up. The military and the semi-military forces included, in 1940, the army with a strength of 30,000 actives and 126,000 reserves; the Republican Guard with a strength of about 6,000; the Fiscal Guard with a strength of about 5,000; and the overseas forces of about 12,000. A voluntary force, the Portuguese Legion, numbers over 50,000. The navy on Dec. 31, 1945, had 5 destroyers, 3 submarines, and several smaller craft. Naval personnel numbers about 6,000.

The illiteracy rate in 1940 was 49.03 per cent. Compulsory education has been in force since 1911. Elementary schools in 1943 numbered 7,714 with 522,925 students. Secondary schools numbered 42 with 15,346 students. Private elementary schools were attended by about 45,000 pupils, and private secondary schools, by about 17,000. There were three universities (Lisbon, Coimbra, Oporto).

The birth rate (1936-1938 annual average 27.4; 1943: about 24.7) is declining and the death rate is also showing a slight decline (1936-38, 16.0; 1943: about 15.2).

The economic aspect of Portugal's corporative state is a planned economy in which each producing unit regulates itself in the interest of the nation. Corporate union

have been established in agriculture, industry and finance. As an example, the government controls the wine trade by means of a federation of growers and a guild of exporters.

Sixty percent of Portugal's people are in agriculture. Although wheat is the leading crop, it is insufficient to meet domestic needs, forcing importation of grain. One of the world's leading winemakers, Portugal produces two famous kinds—Port in the vicinity of Oporto, and Madeira in the islands of the same name. In olive oil production, Portugal ranks third in the world.

AGRICULTURAL CROPS OF PORTUGAL, 1944

Barley	65,784 short tons
Beans (broad)	33,311 " "
Chickpeas	11,367 " "
Corn	443,172 " "
Oats	73,747 " "
Olive Oil	39,850 " "
Potatoes	139,312 " "
Rice	70,110 " "
Rye	103,184 " "
Wheat	405,750 " "
Wine	373,261,717 U. S. gals.

The 1940 livestock census showed 6,151,665 fowls, 3,889,875 sheep, 1,196,323 goats, 1,76,888 swine and 831,674 head of cattle. Wool production in 1943 was 6,306 tons.

Portuguese manufacturing is largely limited to making consumer goods for domestic consumption. It includes a sizable textile industry in cotton, wool, silk and linen; porcelain tiles, and the famous embroidery of Madeira.

Imports in 1944 were \$158,380,000; exports, \$127,919,000. The chief exports in 1943 were wolfram 20.9 percent; sardines 3.7 percent; wine 8.8 percent; cork 7.4 percent; resin 2.8 percent; turpentine, tin ore, and pit props. The chief imports were coal 3 percent; wheat 6.6 percent; raw cotton 6 percent; dried cod 3 percent; sugar 3 percent; hides, gasoline, ammonium sulfate, dyes and cork. The principal customers were Britain 30.4 percent; Germany 1.1 percent; United States 9.6 percent; Mozambique, Angola and Spain. The chief suppliers were Britain 15 percent; Germany 3.3 percent; United States 13.8 percent; Angola, Mozambique and Spain.

The merchant marine in 1943 had 945 vessels of 350,934 gross tons. In 1943, 5,732 vessels of 6,555,000 tons entered Portuguese ports. Railway mileage in 1945 was 2,191.

Ordinary revenue in 1945 was estimated at \$109,445,000; ordinary expenditure, \$9,326,000. The public debt on Dec. 1, 1944 was \$404,820,000. Notes in circulation May 30, 1945 amounted to \$312,971,300 and gold reserves were \$56,699,800. Portu-

guese investments in Brazil in 1938 were \$293,364,000.

NATURAL FEATURES AND RESOURCES. Portugal occupies an area about 360 miles long and 140 miles wide in the southwestern part of the Iberian peninsula. It is crossed by many small rivers, and also by three large ones which rise in Spain, flow into the Atlantic, and divide the country into three geographic divisions. The Minho River, part of the northern boundary, cuts through a mountainous area that extends south to the vicinity of the Douro River. South of the Douro the mountains slope to the plains about the Tagus River. The remaining division is the southern one of Alemtejo. The principal mountain ranges are the Serra da Estrella in the center of the country and the Serra da Monchique in the south.

The Azores, stretching over a distance of 400 miles in the Atlantic, consist of 9 islands divided into three groups, with total area of 888 square miles. The nearest continental land is Cape de Roca, Portugal, which lies 800 miles to the east. The Azores are an important station on Atlantic air routes, and both Britain and the United States established air bases there during World War II. Madeira, consisting of two inhabited islands, Madeira and Porto Santo, and two groups of uninhabited islands, lies in the Atlantic about 535 miles southwest of Lisbon. Total area of the Madeiras is 314 square miles.

The climate is equable and temperate, but in the deep valleys where the mountains keep out the cool winds from the Atlantic, it is excessively hot in summer. Heavy fogs are common along the coast. Rainfall has been as heavy as 16 feet a year. It is heaviest in the north and on the Serra da Estrella.

Mineral resources have not been fully developed but wolfram, coal, iron ore, copper, manganese, iron pyrites, lead, tin and other ores are found. The most valuable is wolfram, with 1943 output of 9,650 metric tons. Coal production in 1943 was 600,000 metric tons; manganese ore, 5,200 metric tons; and pyrites, 21,200 metric tons.

Portugal is one of the world's leading producers of cork, with a 1943 output of 76,688 metric tons. The production of resin, 28,784 metric tons in 1944, and of turpentine, 3,755 metric tons in 1943, is also important.

The fishing industry is a basic part of the national economy employing 40,000 men, and 15,000 boats in 1943. Of special importance is the sardine industry centered at Setúbal south of Lisbon. The sardine catch in 1944 was 146,521 tons valued at about \$12,551,634. Exports of tins of sardines in 1943 amounted to 37,548 tons valued at about \$30,250,000.

PORTUGUESE COLONIAL EMPIRE

	Area (sq. mi.)	Population (census 1940)
AFRICA		
Angola	487,788	3,738,010
Cape Verde Is.	1,557	181,286
Mozambique	297,731	5,081,266
Portuguese Guinea	13,948	351,089
São Tomé and Príncipe Is.	372	60,490
ASIA		
Macao	6	374,737
Portuguese India	1,537	624,177
Timor	7,332	463,996

The status of the Portuguese overseas colonies is fixed by the Colonial Act of July 1930 included in the Constitution approved by plebiscite Mar. 19, 1933. Each colony has a governor or governor general, appointed by the council of ministers for an initial 4-year term and responsible to the minister for the colonies at Lisbon. Each colony has financial and administrative autonomy.

ANGOLA. *Status:* Colony. *Capital:* Luanda (pop. 1940: 61,028). *Governor General:* Commander Vasco Lopes Alves. *Foreign trade* (1943): exports, \$23,735,000 (75 percent to Portugal); imports, \$14,203,000 (50 percent from Portugal); chief exports; maize, 88,738 tons; sugar, 45,904 tons. *Agricultural products* (1941): coffee, 29,884 tons; corn, 338,833 tons; sugar cane, 359,364 tons; beans, groundnuts, palm kernels, rice. *Minerals:* Diamonds (1944: 800,000 carats), lignite, copper. *Forest products:* Beeswax (1941: 1,377 tons), timber. *Industries:* Sugar, palm oil, whale oil, fish oil.

Angola (Portuguese West Africa) stretches along the west African coast for about 1,000 miles from the Congo to the Kunene River. Outside of a coastal plain varying in width from 30 to 100 miles, the colony is part of the great African plateau. The Angola coast and the River Congo were discovered by the Portuguese explorer Diogo Cão in 1482, and Luanda was founded in 1576. The colony's early prosperity was largely dependent on slave trade with Brazil which was not abolished until 1830. Agreements concluded with the Congo Free State, Germany and France in 1885-86 (modified in details by subsequent arrangements) fixed the limits of the province except in the southeast where the frontier was determined by the Anglo-Portuguese agreement of 1891 and the arbitration award of the King of Italy in 1905. The governor-general is assisted by a council of ten (5 officials and 5 Portuguese nationals). There are 5 provinces.

Angola is primarily an agricultural country. Its varied altitude enables it to produce both tropical and temperate crops. Excellent grazing land exists in many parts of the colony, and there are over 2,000,000

cattle. Railway mileage totals 1,442 miles and primary roads, 22,708 miles. The chief ports are Luanda and Lobito. The great majority of the population are of Bantu-Negro stock mixed in the Congo districts with the pure negro. Europeans in 1940 numbered 44,083 and half-castes, 28,305.

CAPE VERDE ISLANDS. *Status:* Colony. *Capital:* Praia. *Governor:* Commander João de Figueiredo. *Foreign trade* (1943): exports, \$1,179,000; imports \$2,376,000; chief exports: salt, 13,164 tons preserved fish, 1,000 tons. *Agricultural products:* Coffee, milled castor oil, oranges, hides.

This group of 14 volcanic islands lying off the west African coast was discovered in 1456 by the Venetian captain Cadamosto, in the service of Prince Henry the Navigator. The island of São Vicente is an important coaling station on the South American route. The vast majority of the inhabitants are mulattoes (116,910) and Negroes (57,718)—descendants of slaves brought to the islands from Africa by early settlers. Public slavery was abolished in 1854, and private slavery, in 1876. Europeans number 5,580. The principal industries, aside from agriculture, are the manufacture of sugar, spirits, salt, cotton and straw hats and fish-curing.

MOZAMBIQUE. *Status:* Colony. *Capital:* Lourenço-Marques (pop. 1936: 47,392). *Governor General:* Gen. João Tristão de Bettencourt. *Foreign trade* (1943): exports \$14,568,000; imports, \$22,356,000; chief exports, cane sugar, 59,553 tons, groundnuts 8,774 tons. *Agricultural products* (1942): sugar cane, 77,850; coconuts, 26,364; sisal, 22,901 fruit, 37,729; corn, 31,959; cotton, 1,055. *Minerals:* Gold, coal, graphite. *Forest products:* Cashew nuts, mangrove bark, ties and timbers.

Mozambique, stretching for about 1,400 mi. along Africa's southeast coast, was discovered by Vasco da Gama in 1498, although the Arabs had penetrated in the area in the 10th century A. D. It was first colonized in 1505 and by 1510 the Portuguese were masters of all the former Arab sultanates on the east African coast. The slave trade was important from the middle of the 17th until the middle of the 19th centuries. The boundaries with British Central and South Africa were delimited in 1891 and with Tanganyika Territory in 1886 and 1890. By the Treaty of Versailles, Portugal was allotted the Kionga Triangle, formerly part of German East Africa. There are no representative institutions, although there is a government Council composed of appointed officials and elected representatives of economic interests. There are four provinces each headed by a governor. One—Manica and Sofala (59,315 sq. mi.)—was held by the Mozambique Company until 1942 when the Portuguese Government refused to renew its charter.

It is probably the most advanced economically of the four.

Agriculture is the chief industry. There are many large plantations, some of which are partially mechanized. Stockraising is hampered by wide tsetse fly areas. Ninety-nine percent of the inhabitants are native Africans of the Bantu tribes. In 1940 there were 27,438 Europeans, 10,596 Asiatics (mostly British Indians) and 15,641 half-castes. In 1941 there were 1,200 miles of railway and 17,000 miles of road, mostly unimproved. The chief ports are Lourenço-Marques and Beira, which is also the port for Rhodesia. The principal river, the Zambezi, divides the colony in half.

PORTUGUESE GUINEA. *Status:* Colony. *Capital:* Bissao. *Governor:* Commander Manuel Maria Sarmiento Rodrigues. *Foreign trade* (1943): exports, \$3,899,000; imports, \$3,871,000; chief exports: groundnuts, 38,228 tons; palm kernels, 513 tons. *Agricultural products:* Groundnuts, palm kernels, rice. *Forest products:* Wax, timber.

This colony, lying on the west African coast entirely surrounded by French West Africa, was discovered in 1446 by the Portuguese Nuno Tristão and was separated from the colony of the Cape Verde Islands in 1879. It consists of a low-lying coastal region and numerous islands off the coast, among them, Bolama. The country is undeveloped economically and most of the natives are farmers. There are no railways, but navigable rivers totaling over 1,000 miles are important trade arteries. About two-fifths of the natives are Moslem; there were, in 1940, 1,419 Europeans and 2,200 half-castes, mostly creoles from the Cape Verde Islands.

SAO TOME AND PRINCIPE. *Status:* Colony. *Capital:* São Tomé. *Governor:* Capt. Carlos de Sousa Gorgulho. *Foreign trade* (1943): exports, \$1,761,000; imports, \$925,000; chief exports: cacao, coffee. *Agricultural products:* Cacao, coffee, coconuts and copra, palm oil.

These volcanic islands, lying in the Gulf of Guinea about 125 miles off the coast, were discovered by the Portuguese in 1471. Most of the early population were convicts and Jews from Portugal and slaves from Brazil and the mainland, but the bulk of the present inhabitants are Negro contract laborers from the mainland and Cape Verde engaged to work cacao plantations.

MACAO. *Status:* Colony. *Capital:* Macao. *Governor:* Commander Gabriel Mauricio Teixeira. *Foreign trade* (1939): exports, \$384,425; imports, \$3,184,288; chief exports: fish, cement, preserves. *Manufactures:* Cement, preserves, firecrackers, vegetable oils, metal products.

Macao comprises the peninsula of Macao and the two small islands of Taipa and Ilóane on the south China coast, on the east side of the entrance to the Canton

River, about 35 miles from Hong Kong. Established by the Portuguese in 1557, it is the oldest European outpost in the China trade, but Portugal's sovereign rights to the port were not recognized by China until 1887, and its boundaries are still not delimited. The port has been eclipsed in importance by Hong Kong, but it is still an important distribution center, and also has an important fishing industry employing over 40,000 people. It is notorious for its opium trade and gambling houses. Europeans number about 11,000, mostly Portuguese.

PORTUGUESE INDIA. *Status:* Colony. *Capital:* Nova Gôa. *Governor General:* Col. José Ricardo Pereira Cabral. *Foreign trade* (1940): exports, \$796,000; imports, \$4,081,000, chief exports: fish, spices, copra. *Agricultural products:* Cashew nuts, coconuts, spices. *Manufactures:* salt factories. *Minerals:* Manganese, salt.

The colony consists of Gôa and 3 islands on the Malabar coast; Damão and the territories of Dadará and Nagar-Aveli, on the Gulf of Cambial; and Diu, with the continental territories of Gocola and Simbor, on the coast of Gujerat. Gôa, captured in 1510, was the first Portuguese territorial possession in Asia and later became capital of the whole Portuguese empire in the east. The native population is largely Hindu.

TIMOR. *Status:* Colony. *Capital:* Dilly (pop. 1936: 3,000). *Governor:* Capt. Manuel de Abreu Ferreira de Carvalho. *Foreign trade* (1940): exports, \$166,000; imports, \$145,000; chief exports: coffee, sandalwood, wax, copra. *Agricultural products:* Coffee. *Forest products:* Sandalwood, wax.

Portuguese Timor consists of the eastern half of the island of Timor in the Malay archipelago, with the territory of Ambeno and two neighboring islands. It was first settled by the Portuguese early in the 16th century. In 1859 the island was divided between Portugal and the Netherlands, and boundary adjustments were effected by the convention of 1904. It became a separate colony in 1896. Fishing and copra manufacture are important; trade is mostly in the hands of Chinese, Malaysians, and Arabs. The colony was occupied by Dutch and Australian troops in Dec. 1941 and by Japanese troops in Feb. 1942, both under strong Portuguese protest.

Rumania (Kingdom)

(Rômania)

Area (est. 1945): 91,934.

Population (est. 1945): 16,500,000.

Density per square mile: 179.4.

Sovereign: King Michael I.

Premier: Petru Groza.

Principal cities (est. 1939): Bucharest, 648,162 (capital); Jassy, 104,471 (trading center,

Moldavia); Galati, 102,232 (chief Danube port); Cluj, 100,844* (Transylvanian industrial center); Timisoara, 89,872 (western commercial center).

Monetary unit: Leu.

†Racial stock (1930): Rumanian, 74.9%; Magyar, 9.4%; German, 4.3%; Turkish, 1.9%; Gypsy, 1.8%; Ruthenian, 1.7%; Bulgarian, 1.3%; Others, 4.7%.

Languages: See Racial stock.

Religions (1938): Greek Orthodox, 67.4%; Jewish, 7.5%; Greek Catholic, 7.1%; Roman Catholic, 6.1%; Reformists, 3.7%; Lutheran, 2.0%; Moslem, 1.3%; Others, 4.9%.

*Hungarian census 1939.

†Excluding Bessarabia.

In World War I, Rumania joined the Allies and won enough land at the peace conference to double its size. In World War II, Rumania joined the Axis and as a result lost about half of the earlier gains. This made its present size about that of Oregon and, politically, it was thoroughly dominated by the Russians after World War II.

Most of Rumania was the Roman province of Dacia from about 100 to 275 A. D. From the 6th to the 12th centuries, wave after wave of barbarian conquerors—Vlachs, Bulgars and others—passed over the region. Of the two regions which eventually became Rumania, Walachia was taken by the Turks in 1411, and Moldavia, in the 16th century, but both retained semi-autonomy. After the Russo-Turkish War of 1774, they went under de facto Russian protection.

The Convention of Paris nominally united the two provinces in 1858, and Alexander Cuza was elected Prince of Moldavia and Walachia. In 1866 he was forced to abdicate and was succeeded by Prince Charles I of Hohenzollern-Sigmaringen. The Treaty of Berlin recognized Rumania's complete independence in 1878, and in 1881 the principality was elevated to kingdom. Rumania's spoils from the Second Balkan War in 1913 was the Black Sea province of Dobruja. The following year King Charles was succeeded by his nephew, Ferdinand. The spoils from World War I, making Rumania then the largest Balkan state, included Bessarabia, northern Transylvania and Bukovina. The Banat, a Hungarian area, was divided with Yugoslavia.

In 1926 Crown Prince Carol renounced his rights to the throne and when King Ferdinand died on July 29, 1927, Carol's son, Michael, became king under a regency. However, Carol returned from exile in 1930, became King Carol II, and gradually became the most powerful political force in the country. On Feb. 10, 1938, he abolished the democratic constitution of 1923. On June 21, 1940, the country was reorganized along Fascist lines, and the fascist Iron Guard became the nucleus of the new totalitarian party. On June 27, Russia occupied Bessarabia and northern Buko-

vina. By the Axis-dictated Vienna award of August 30, 1940, two-fifths of Transylvania went to Hungary. On Sept. 4, the King dissolved Parliament and granted the new premier, Marshal Ion Antonescu, full power, after which he abdicated. The first step of his son, Michael, was to confirm Marshal Antonescu in his status of head of the state and premier. Rumania subsequently signed the Tripartite Pact on Nov. 23, 1940, and then joined in Germany's attack on Russia, reoccupying Bessarabia. Following the invasion of Rumania by the Red Army in August, 1941, King Michael led a coup d'état which ousted the Antonescu government. The new cabinet headed by General Constantine Sinescu included Socialist and Communist representatives. An armistice was signed September 12 in Moscow. Following withdrawal from the cabinet of members of National Democratic Front (NDF), a political group formed by the Communists, Socialists and subsidiary parties, Sinescu was replaced on December 6, 1944 by General Nicolai Radescu. After continued Communist agitation and Soviet pressure, Radescu was replaced on March 6, 1945 by Dr. Petru Groza, leader of the Peasants' Front, an NDF affiliate. Groza formed a cabinet consisting of 12 NDF ministers and 4 nonparty members. All Liberal and Peasant Party ministers were dropped.

As one result of the Moscow Conference in Dec. 1945, a tripartite commission proceeded to Rumania to advise the King on broadening the government. On Jan. 1, 1946 one representative each of the Peasants and Liberal Parties was added to the cabinet, and on Feb. 5 the United States and Britain recognized Rumania conditionally upon the holding of free elections.

GOVERNMENT. Pending the signing of the final peace treaty, Rumania is controlled by an Allied Control Commission composed of U. S., British and Soviet military representatives. The Soviet chairman of the commission is also the commander of Soviet occupation troops in Rumania. U. S. and British participation is for the most part nominal and the country is actually controlled by Soviet military forces.

SOVEREIGN. Michael I, born October 18, 1921, son of King Carol II and Queen Helen of Greece, was proclaimed King on the death of his grandfather, Ferdinand, July 20, 1927 under a regency. On his father's return to the throne on June 1, 1930, he again became crown prince, but was proclaimed King again on Carol's abdication on Sept. 6, 1940.

The constitution of 1923, abandoned during the regime of King Carol II, was restored by royal decree on Sept. 2, 1944. This constitution provided for a Senate composed partly of hereditary and partly of elected members and of a chamber of deputies elected by universal su-

Frage. There had been no general election since December 1937, and parliament was dissolved on September 5, 1940. Since there is no legislative body the government is carried on by decrees which must receive the royal assent. Executive power is vested in the cabinet. Local government is controlled by the Minister of the Interior.

On July 14, 1946, King Michael issued a decree abolishing the Senate and called for elections in late Autumn to pick a chamber of deputies. In that election the Communists won in an election not regarded as free abroad.

Military service is compulsory from twenty-one with an initial training period (1940) of three years and service on reserve until fifty. The army in 1940 had 200,000 active and 1,000,000 reserves. The air force in 1939 had about 35,000 men and 1,000 planes.

The army, now being reorganized and re-equipped with Soviet assistance, has been unofficially estimated at about 200,000 troops, organized into approximately 15 divisions. Soviet occupation troops in July 1946, were unofficially estimated at 390,000. This figure included a large number of troops being regrouped in Rumania prior to return to the Soviet Union for demobilization. The navy on Dec. 31, 1945, was estimated to number 3 destroyers, 3 submarines, 1 mine layer and some minor war vessels. Several warships were appropriated by the Red Fleet.

Education is free and compulsory. There are two universities: Bucharest (founded 1864), and Jassy (1863). The state Church which is governed by a Holy Synod professes the Eastern Orthodox creed. Its independence was recognized by the Oecumenical Patriarch of Constantinople in 1885. The clergy of the Orthodox Church and of the Uniat (Greek Catholic) Rumanian Church are paid by the State.

In its economy Rumania is predominantly agricultural with about 80 percent of the population engaged on the soil. In wheat, rye and other grains, it is one of the richest countries of southeastern Europe. In 1939 the largest acreage was devoted to corn with a production of 6,670,238 tons, and wheat with a production of 4,908,321 tons. (These statistics included production in Bessarabia and Bukovina since ceded to Russia.) Other crops are flax, hemp, fruit, vegetables, potatoes, sugar beets, sunflower seeds, tobacco and grapes. Stockraising, particularly of sheep and cattle, is also important.

Agrarian reform measures effected in 1945 provide for the distribution of the estates over fifty hectares in lots of twelve and one half hectares to each peasant. Collectivization was not included in the program but all cattle and implements became the outright property of the State

and were to be concentrated for lease to farmers.

The chief industries—flour milling, brewing and distilling—are directly connected with agriculture. However, the iron and steel, and metal and machinery industries expanded considerably after the initiation of the rearmament program in 1935. In 1936 there were 3,553 industrial establishments with 260,934 workers and output valued at \$376,036,300. The most important by value of output were food processing, textile, metal, chemical, and wood and paper.

Exports in 1939 amounted to \$190,641,000 and imports, to \$162,774,000. The principal exports were petroleum products, 41.9 percent; cereals and cereal products, 26.9 percent; wood and wood products, 9.4 percent; live animals, 6.7 percent; and seeds, 5 percent. Principal imports, by percentage, were: iron and manufactures, 29.6; machinery, apparatus, and motors, 19; vegetable fibers and products, 12.9; metal and metal products, 7.6; and vehicles, 7.7. The chief customers, by percentage, were: Germany, 32.3; Britain, 14.1; Italy, 12.1; Czechoslovakia, 10.9; France, 3.4. The principal suppliers also by percentage, were Germany, 39.3; Czechoslovakia, 16.8; Italy, 8.8; France, 8.2; and Britain, 5.9.

DANUBE RIVER. The Danube, flowing along the southern border for over 200 miles, is a highly important commercial artery; in 1938 traffic amounted to 2,834,013 tons. Before World War II, traffic on the maritime Danube from the sea to Braila was controlled by the European Danube Commission composed of representatives of Great Britain, France, Italy and Rumania. Traffic on the fluvial Danube from Braila to Regensburg was under the control of the International Danube Commission. Trans-shipment between seagoing vessels and river barges is made at Galati and Braila. The Rumanian Sea and River Navigation company with one-fourth of its capital furnished by Russia and three-fourths by Rumania, now monopolizes river and sea transport. The principal seaport is Constanta. Railway and highway mileage in 1938 (including territory since ceded to Russia and Bulgaria) were 6,980 and 65,670, respectively. The Sovrom Civil Aviation Company, under Russian management but equally financed by Russia and Rumania, has the monopoly for all civil air transport inside Rumania and to the Black Sea. Pipelines total 1,997 miles.

Government revenue in 1939 was \$225,238,792 against expenditure of \$215,493,877. The national debt was \$740,450,141 in 1939. On Nov. 2, 1945, there was announced the formation of a joint Soviet-Rumanian Bank, equally financed by both countries.

The Carpathian Mountains divide Rumania's upper half from north to south and connect near the center of the country

with the Transylvanian Alps. North and west of these ranges lies the Transylvanian plateau, and to the south and east are the plains of Moldavia and Walachia. The last 190 miles of the Danube River flows through Rumanian territory, reaching the Black Sea at Sulina. Other principal rivers are the Prut forming the northeastern boundary with Russia and joining the Danube east of Galati; and the Siret flowing south through Moldavia, also joining the Danube east of Galati.

The Moldavian-Walachian region has hot summers and extreme frost and blizzards in winter. Variations are less extreme in Transylvania and the Banat. Bucharest's average summer temperature is 72 degrees; winter, 27 degrees. In some winters the Danube is ice-bound for as long as three months.

By far the most valuable of Rumanian minerals is oil, produced chiefly in the Polesti region about fifty miles north of Bucharest. In 1939 the output was 45,600,000 barrels, valued at \$45,464,450, about 2 percent of the total world production. For 1944 production was estimated at 25,600,000 barrels. Natural gas from Transylvania is the second most important mineral, coming to 60,917,978,250 cubic feet in 1938. Other 1939 mineral output figures were: coal, 318,565 tons; lignite, 2,535,290 tons; iron ore, 145,495 tons; silver, 712,731 ounces; and gold, 211,496 ounces. The Russo-Rumanian Oil Company, with a capital of 5,000,000,000 lei and equal participation by both countries, now controls all former German oil firms and has a monopoly on new exploitation and development.

About 20 percent of the country is forested. Wood exports are important, amounting in 1939 to 948,000 tons valued at \$17,991,000.

The fisheries of the lower Danube rank second in Europe only to the Volga in richness among river fisheries, but those of the Black Sea are negligible.

El Salvador (Republic)

(República de El Salvador)

Area: 13,176 square miles.

Population (est. 1945): 1,935,000.

Density per square mile: 147.4.

President: General Salvador Castañeda Castro.

Principal cities (est. 1943): San Salvador, 107,813 (capital); Santa Ana, 46,806 (coffee, sugar); Nueva San Salvador, 24,016 (trading center).

Monetary unit: Salvadorian colón.

Racial stock (est. 1939): Mestizo, 78%; Indian, 11%; White, 11%.

Language: Spanish.

Religion: Roman Catholic.

Pedro de Alvarado, a Cortes lieutenant, conquered El Salvador in 1525, and the area was administered as part of Guatemala until the general Central American revolution against Spain in 1821. El Salvador struggled out as an independent republic in 1841 after the dissolution of the Central American Union. Its story since then is one of revolution and strife.

In January of 1931 the first free election in twenty years named Arturo Araujo president. He was overthrown before the year was over. General Maximiliano Hernández Martínez, his successor, remained in power until 1944 when a general strike forced his resignation. The next regime, also militarist led, lasted only five months and was succeeded March 1, 1945, by the present government.

The 1886 constitution provides a president popularly elected for four years and ineligible to succeed himself; also, a one-house legislature. Each regional department is administered by a governor named by the president. Higher court judges are elected by the national legislature. The military is an army limited to 3,000, a militia, a national guard, and a small air force.

With the second lowest illiteracy rate in Central America, El Salvador provides free and compulsory education; both public and private schools are state-controlled. Primary schools in 1941 numbered 1,330 with enrollment of 89,792; fifty-eight intermediate schools had 3,309 pupils; and the national university had 506 students.

The majority of the population is mixed white and Indian, but the governing class is composed chiefly of the white group of Spanish colonial origin.

El Salvador probably is the most intensively cultivated of Latin American nations with more than 80 percent of its land planted. Coffee, the big export crop, (92,000 bags of 152 pounds each in 1945) is controlled in volume by a commission of government and planters. Corn, sugar, beans, rice, tobacco, cacao, indigo, miller and sisal fiber are other products. There is some cattle raising and a few local factories, including a monopoly on the supply of henequen bags for coffee.

There are two railways with 375 miles of track. One, British-owned, joins San Salvador and Acajutla, the principal port. The other, American-owned, runs from the eastern port of La Unión through San Salvador and into Guatemala. All-season highways total 1,378 miles, with an additional 2,300 miles of unimproved roads. TACA and Pan American provide air service.

El Salvador's public debt in 1943 was 52,162,000 colóns. British investments in 1944 were 1,355,240 pounds; U. S. direct investments in 1940, \$11,204,000.

El Salvador is the smallest, most densely populated of Central American nations, and the only one without an eastern coast. Most of it is a fertile volcanic plateau about 2,000 feet high. It has several volcanoes, some still active, and many lovely crater lakes. One of these, Lake Ilopango, is a landing place for seaplanes. The mountain ranges along the borders of Guatemala and Honduras give the highlands an almost temperate climate, but the lowlands are often hot and sultry.

Gold, silver, coal, copper, iron, zinc, mercury, and sulphur are the nation's minerals. Gold production in 1943 (29,008 fine oz.) was valued at \$985,656; silver production (220,976 fine oz.), at \$99,444. Forest resources, much smaller than in other Central American states, include dye-wood, mahogany, cedar, and walnut. A leading source of balsam, a medicinal gum, El Salvador exported 101 tons in 1942.

San Marino (Republic)

Area: 38 square miles.
Population (census 1939): 14,547.
Density per square mile: 382.8.
Executive: Two regents selected every six months by the Grand Council.
Principal city: San Marino (capital).
Monetary unit: Lira.
Racial stock: Italian.
Language: Italian.
Religion: Roman Catholic.

San Marino, the oldest and smallest republic in the world, is about one-tenth the size of New York City. It has no army, no public debt, no wealth, no poverty, and is entirely surrounded by Italy, in the pennines near Rimini. According to tradition San Marino was founded about 350 B. C. and had good luck for centuries in staying out of the interminable wars and raids on the Italian peninsula. The Pope recognized its independence in 1631.

San Marino hires its police and judges from Italy. It no longer confers titles for consideration, but it does derive much revenue from the exporting of its postage stamps which are changed often to keep philatelists buying. Other exports are barley, wine and cattle, and building stone from Mount Titano.

Executive power is exercised by regents, two of whom are appointed every six months from the popularly-elected Grand Council. There are several elementary schools and one high school whose diplomas are recognized by Italian universities. San Marino is linked with Rimini on the Adriatic by a twenty-mile electric railway. In 1944 the people tore up part of the line in an effort to keep fleeing German troops out of their country which already was jammed with 100,000 displaced persons.

Siam (Kingdom)

(Thai)

Area: 198,247 square miles.
Population (est. 1940): 15,717,000.
Density per square mile: 78.6.
Ruler: King Phumiphon Aduldet (under regency).

Prime Minister: Rear Admiral Thawan Dhamrong Navaswat.

Principal cities (census 1937): Bangkok, 684,994 (chief port, commercial center); Khonkaen, 473,475 (trading center); Chiangmai, 443,476 (rice, teak); Chiangrai, 60,000 (Northern trading center).

Monetary unit: Baht or tical.

Racial stock (1937): Thai, 90%; Chinese, 3.4%; Indian and Malayan, 3.4%; Cambodian and Annamese, (60,000); White, 2,000; Others, 2.5%.

Languages: Siamese, Chinese.

Religions (census 1937): Buddhist, 95.0%; Moslem, 4.3%; Christian, .4%.

*Including about 2½ million people of Chinese descent born in Siam.

The Siamese race first began moving down into Siam from the Asiatic continent in the 6th century A. D., and by the end of the 13th century, ruled most of the western portion. Over the next four hundred years the Siamese fought sporadically with the Cambodians to the east, the Burmese to the west. The British obtained recognition of paramount interest in Siam in 1824, and in 1896 an Anglo-French accord guaranteed Siamese independence. In 1909 Siam renounced claims to suzerainty over four Malayan states in return for a partial cessation of British interference in Siamese internal affairs. Siam declared war on Germany in 1917.

A coup on June 24, 1932, changed the absolute monarchy into a representative government with universal suffrage, and a second revolt in June, of 1933, forced the king to appoint a liberal cabinet. Thus shorn of much power, King Prajadhipok abdicated in March of 1935 in favor of his nephew, Prince Ananda Mahidol. After a few hours of token resistance on Dec. 8, 1941, Siam agreed to Japanese occupation and the country was one of the springboards in World War II for the Japanese campaign against Malaya. After the fall of its pro-Japanese puppet government in July of 1944, Siam pursued a policy of passive resistance against the Japanese, and on Aug. 16, 1945, after the Japanese surrender, Siam repudiated the declarations of war it had made against Britain and the United States in 1942.

King Phumiphon Aduldet, born in 1928, second son of the late Prince Mahidol of Songkhla, succeeded to the Siamese throne on June 9, 1946, when his brother, King Ananda Mahidol, died of an accidental gunshot wound. A regency council was named on June 16 to serve until the King reaches majority.

Siam has a unicameral assembly of 182 members, half of them named by the King, half elected for four years by universal suffrage. The King exercises executive power through a state council of fourteen to twenty-four members headed by the Prime Minister. For administration, Siam divides into seventy provinces each under a commissioner.

The 1937 defense act made military service compulsory for a period of two years between the ages of eighteen and thirty. The army had 30,000 regulars in 1940, and there was a fair-sized air force. On Dec. 31, 1945, the navy had four coast defense ships, a destroyer, three submarines, and other small craft.

Buddhist monasteries throughout Siam supply most of the elementary education in rural districts. In 1939 there were 429 government schools with 61,297 pupils, 11,072 local and municipal schools with 1,484,483 students, and two universities with 11,525 students. More than 77 percent of local and 23 percent of government schools were in monasteries. In 1937 the literacy rate was 31 percent.

Four-fifths of the Siamese work at agriculture. Rice—4,923,315 tons were produced in 1940—is the principal crop, the staple food and the leading export. Next most important and growing rapidly is rubber—41,266 tons in 1939. Other products include coconuts, corn, tobacco, cotton, sesame, sugar cane and soybeans. Livestock, poor in quality and quantity, is used mainly for hauling. In 1938 Siam counted 10,970 elephants, 385,565 horses, 5,711,720 bullocks and 5,551,232 buffaloes. Manufacturing is of little importance, except for native handicraft and food processing.

Exports, largely rice and tin, were \$95,000,000 in 1941, and included rubber, teak, gold, hides and fish. Imports were \$60,000,000, including cotton textiles, foodstuffs, oil, machinery and electrical appliances. Domestic business is largely controlled by Chinese.

Siam has good water routes. Bangkok, the chief port, twenty-five miles up the Menam River from the Gulf of Siam, handles about 80 percent of the foreign trade. Railways under government ownership total about 2,050 miles. In 1939 there were about 3,633 miles of highway. Air transport was well developed even before World War II.

Revenue in 1940 amounted to \$45,890,066 and expenditures, \$45,889,292. The public debt was \$25,510,154.

Siam, more than two-thirds the size of Texas, supports most of its population in the central alluvial plain which is drained by the Menam River and tributaries. The climate is monsoonal but the full force of the monsoons is broken by the western frontier hills. Rainfall decreases from

south to north. Humidity is always high but temperatures fall as low as 40 degrees in the November-February cool season.

Siam has small deposits of many important minerals, and some precious stones. Only tin, gold and tungsten are in commercial production. Tin output in 1940 was 20,841 tons—10 percent of the world total. Tungsten output was 517 tons in 1939.

The main forest product, taken from the northern hill country, is teak—73,486 tons in 1938. Others include theng, wood, iron wood, ebony and rattan.

Fisheries, both ocean and river, ordinarily rank second to agriculture in product value. The average catch of 40,000 tons includes mainly mackerel, also anchovies, mollusks and shellfish.

Spain (España)

Area: 194,947 square miles.

Population (est. 1944): 26,761,902.

Density per square mile: 137.2.

Chief of State: Gen. Francisco Franco Bahamonde.

Principal cities (est. 1944): Madrid, 1,140,610 (capital); Barcelona, 1,108,961 (chief port, textiles); Valencia, 508,072 (silk, oranges); Seville, 347,997 (wines, iron ore); Zaragoza, 266,488 (RR center); Malaga, 258,598 (seaport).

Monetary unit: Peseta.

Racial stock: Spanish, Basque, Catalan.

Language: See Racial stock.

Religion: Roman Catholic.

HISTORY. Spain, twice the size of Oregon and once one of the world's great powers, holds a somewhat tainted position among nations today. The Franco dictatorship helped substantially by Hitler and Mussolini, won control of the country in the civil war of 1936-39 and, then, by staying nominally neutral in World War II, managed to survive the defeat of the Nazi and Fascist powers. The survival, however, was not without its cost. Spain today is the only non-enemy state of World War II that is specifically barred from United Nations membership.

From 201 B. C. to 406 A. D. Spain was part of the Roman Empire. Then the Goths and the Vandals formed a powerful kingdom which was semi-conquered in the 8th century by the Moors from Africa. The last Moorish stronghold, the Kingdom of Granada, fell to the forces of King Ferdinand and Queen Isabella, who were trying to unify Spain, in 1492. In the same year, the Spanish-financed explorer Christopher Columbus was discovering the new world for the Spanish crown.

Charles V (1516-55) became King of Spain and also Holy Roman Emperor. Under his son, Philip II, Spain reached its

peak of its power, but the beginning of decline was marked when the British defeated the Invincible Armada in 1588.

The line of Spanish Hapsburgs ended in 1700. The War of the Spanish Succession followed. By the Treaty of Utrecht, in 1713, Spain was forced to accept a Bourbon king, the Duke of Anjou, and lost Gibraltar and all holdings in the Netherlands and southern Italy. Then, while the Spaniards were resisting Napoleon's efforts to establish a Bonaparte line in Spain, most of their colonies in America revolted and became independent. The loss of Cuba, Puerto Rico and the Philippines in the Spanish-American War of 1898 left Spain with only a few scattered possessions in Africa. Neutrality was maintained during World War I.

From 1923 to 1930 Spain was a military dictatorship under General Miguel Primo de Rivera. A wave of republicanism in 1931 forced the abdication of King Alfonso XIII and a new constitution was drawn declaring Spain to be a workers' republic. Several revolts, strikes and shifts of government kept Spain in chaotic shape and then in July of 1936, the army revolt led by Generalissimo Francisco Franco burst into civil war.

While Hitler and Mussolini helped Franco, Russia helped the Loyalist side. The last Loyalist forces surrendered on March 29, 1939. Spain became a dictatorship under Franco, and signed the anti-Comintern pact in 1939.

In World War II, while he shied away from the risk of becoming a belligerent, Franco was pro-Axis in sympathy, helped the Axis with material, intelligence and services to German U-boats, and even sent the Spanish Blue Division to fight against Russia.

Monarchist sympathies remained strong both in and out of the Falangist Party. Ex-King Alfonso died in Rome early in 1941. His son and pretender to the throne, Don Juan, while denouncing Franco's regime, met with the latter's representatives in Lisbon in February 1946 in an unsuccessful attempt to work out a plan for the re-establishment of a constitutional monarchy. On the republican side, a Spanish "Government-in-exile" was formed in Mexico City, in August, 1945 with Diego Martinez Barrio as president and José Giral as premier. This government has been recognized by several countries.

GOVERNMENT, NATIONAL. Franco is head of the state, national chief of the Falange Party, prime minister and Caudillo (leader) of the empire. Practically, the country is ruled by the cabinet, appointed by Franco, the National Council of the Falange Party and to a lesser extent, the Cortés (Parliament). The principal mission of the Cortés is the planning and

formulation of laws without prejudice to the veto power which belongs to the head of the state. Cabinet ministers, party officials, civil governors, university heads, and the president of learned bodies become members of it ex-officio. There is no provision for the introduction of legislation by any of the 438 Cortés members.

LOCAL. The Nationalist state abrogated the statutes under which Catalonia and the Basques had regional autonomy and modified legislation dealing with provincial and home rule. The government appoints the members of provincial deputations, the civil governors of the 50 provinces, and the mayors and councilmen of the municipalities.

DEFENSE. Franco is commander-in-chief of the army, navy and air force, each administered by a cabinet minister responsible to him. Military service is compulsory for a period of two years. The standing army, estimated at 650,000 men, is divided into 25 divisions. Planes in service are predominantly German and Italian. The air force in 1940 had 100,000 men and 50,000 reserves. The Navy in 1945 had 6 cruisers, 16 destroyers, 8 submarines, 6 mine layers and 3 sloops. Under construction were 20 destroyers, 8 sloops and 7 fleet mine sweepers.

SOCIAL AND ECONOMIC CONDITIONS. **EDUCATION.** The illiteracy rate was 42.35 percent in 1943. Primary education is compulsory and free; religious instruction is permitted. In 1942 there were 44,572 public schools with 3,852,897 pupils, 117 secondary schools and 170,782 pupils, 53 normal schools with 11,877 pupils, and 12 universities with 34,669 students. The universities are in Barcelona (founded in 1450), Granada (1526), Madrid (1508 and 1836), Murcia (1915), Oviedo (1317), Salamanca (1230), Santiago (1501), Seville (1502), Valencia (1245), Valladolid (1346) and Zaragoza (1474).

RELIGION. Roman Catholicism is the established religion. After the civil war the church was restored to substantially its prerepublican position; confiscated property was returned, religious education was reintroduced, and divorce was suppressed.

POPULATION. The population increased 26.7 percent from 1900 to 1930 and the civil war did not prevent an increase of 9.8 percent in 1930-40. The birth rate in 1943 was about 23.5, one of the highest in Europe, while the death rate was 12.7.

SOCIAL POLICY. The labor charter promulgated March 9, 1938 defined Spain as a totalitarian and syndicalist state. So-called vertical syndicates have supplanted all union organizations and all other organizations for the protection of the economic interests of productive groups. A branch of production extends "vertically" from the

raw material stage through the industries and firms engaged in processing and marketing. Prices, wages and production, and the distribution of merchandise are controlled.

AGRICULTURE. Spain is predominantly agricultural. The principal land uses, apart from forest, pasture and forage crops, are the production of grain, potatoes, pulse, sugar beets, oranges, grapes and olives. Since the civil war Spain has not recovered balance in production and consumption of food stuffs. Normally, Spain produces exportable quantities of oranges, lemons, almonds, filberts, raisins and other subtropical commodities. Wine production in 1945 was estimated at 15,000,000 hectoliters as compared with the annual average of 23,400,000 hectoliters during the 1926-35 period.

CHIEF AGRICULTURAL CROPS (in short tons)

	Average 1926-35	1945*
Wheat	4,547,000	2,000,000
Oranges	1,259,000	880,000
Barley	2,452,000	650,000
Corn	721,000	412,500
Oats	702,000	192,500
Rye	614,000	203,500
Olive oil	387,000	230,000

*Estimate.

INDUSTRY. The cotton, woolen and other textile industry, normally employing over 300,000 workers, is the leading manufacture. The making of paper is also important. In 1942, more than 500 companies made electrical goods valued at 500,000,000 pesetas, and the value of the output of the growing chemical industry was about the same. Pig iron production in 1945 was about 471,444 tons. Steel output was 549,-416 metric tons.

TRADE. Imports in 1942 came to \$55,657,-000, with Germany supplying nearly 20 percent of the goods. Cotton, machinery, coffee and autos were the leading imports. Exports totaled \$57,588,000, nearly 22 percent of which went to Germany. Oranges, hides, skins, cork and wines were the leading exports.

COMMUNICATIONS. The merchant fleet which suffered severely during the civil war and World War II comprised 925 vessels of 1,019,884 gross tons in 1943. The national highway system is about 45,750 miles not including 6,100 miles maintained by the provincial governments.

In 1942 there were 7,970 miles of normal gauge and 2,835 miles of narrow gauge railways, of which about 781 miles were electrified. In 1940 railways carried 44,643,-701 tons of freight. Telephones in 1944 totaled 393,000.

FINANCE. The initial budget (1946) calculated ordinary government expenditure

at 11,298,000,000 paper pesetas and revenues at 11,100,000,000 paper pesetas. The extraordinary budget amounted to 1,917,-000,000 pesetas. The air force, army, navy and government (police) departments received 48.6 percent of the total ordinary and extraordinary appropriations. The public debt in 1945 was 38,300,000,000 pesetas. Deficit financing, the enormous costs of reconstruction, and World War II contributed to persistent inflationary tendencies in 1939-45. The note issue of the bank of Spain amounting to 9,300,000,000 pesetas in July, 1940, was up to 17,900,000,-000 pesetas by the end of 1945.

NATURAL FEATURES AND RESOURCES.
TOPOGRAPHY. Spain, only twenty miles from Africa at the closest point, and separated from France by the Pyrenees, is generally a broad plateau sloping to south and east and crossed by a series of mountain ranges and river valleys. Most of the coast line is steep and rocky with few indentations. The best harbors are on the Galician coast in the north; the broadest coastal plain is on the Gulf of Cadiz in the southwest. The Guadalquivir River in the south is navigable to Seville, but most of the others are mountain streams useful only for waterpower. Hydroelectric stations—580 of them made nearly three billion kilowatt hours of power in 1938—account for 75 percent of Spain's generating capacity.

OUTLYING ISLANDS. Off its east coast 172 the Mediterranean, Spain owns the *Balearic Islands* which total 1,936 square miles. The largest is Majorca—1,405 square miles. Sixty miles west of north African coast 112 the Atlantic, Spain owns the *Canary Islands*—2,894 square miles.

CLIMATE. Most of Spain's climate is extreme. Madrid, for example, reaches a high of 110 and a low of 10 degrees. In the southeast, the protection of the Sierra Nevada range makes the climate subtropical. The northeast, with climate much like that of the British Isles, is the only region with normal rainfall. In the east and southeast irrigation is requisite to farming.

MINERALS. Spain's mineral wealth, second to agriculture in the national economy, yields millions of tons of ore and domestic manufacture and export. In 1943 the mining industry employed 209,756 workers and its output was valued at 3,554,575,000 pesetas. Following are some recent production figures, with all tons metric—coal, 11,694,000 tons in 1944; potash ore, 439,657 tons in 1943; iron ore, 1,156,924 tons in 1945; lead ore, 47,913 tons in 1943; zinc ore, 72,349 tons in 1943; iron pyrites, 514,748 tons in 1943. Spain also produces important quantities of mercury, phosphate, manganese, cobalt, sulphur, silver and gold. It is one of the major producers of wolfram for which there was a big demand in World War II. Output reached

high of 4,038 metric tons in 1943 but fell to 222 in 1945.

FORESTS. Spanish forests yield lumber, pine resins, cork and esparto. The 1939 lumber production was 180,104,715 board feet; the 1945 cork output was about 40,000 tons. In 1942 Spain produced 15,432 tons of crude resin, 11,023 tons of processed resin oil, and 3,307 tons of turpentine oil.

FISHERIES. Over 100,000 persons work in the fishing, canning and related industries. The 1943 catch, principally cod, tunny and sardines, was 445,000 tons valued at 1,055,-712,000 pesetas.

SPANISH COLONIAL POSSESSIONS

Country	Area (sq. ml.)	Population (est. July 31, 1944)
Ceuta, Melilla, Alhucemas, Chafarines, and Peñon Velez	82	145,000
Morocco, Spanish	8,080	992,000
Spanish Guinea	10,900	168,000
Western Sahara including Ifni and Spanish Sahara	116,200	72,000

Sweden (Kingdom)

(Sverige)

Area: 173,341 square miles.

Population (est. 1945): 6,597,348.

Density per square mile: 38.0.

Sovereign: King Gustav V.

Premier: Tage Erlander.

Principal cities (est. 1946): Stockholm, 671,-525 (capital); (est. 1945) Göteborg, 296,289 (chief port, shipbuilding); Malmö, 167,885 (seaport); Norrköping, 75,792 (textiles); Helsingborg, 65,357 (Baltic seaport).

Monetary unit: Krona.

Racial stock: Swedish.

Language: Swedish.

Religions: Evangelical Lutheran, 99%; Others, 1%.

HISTORY. While it has a long interior coast line, Sweden is locked into the heart of northern Europe by the downthrust of the Scandinavian peninsula. A good deal larger than California in size, and one of the world's most highly unionized and progressive of states in social welfare science, Sweden maintained a precarious neutrality during World Wars I and II and suffered the privations of being virtually cut off from world markets by British and German blockades. On the other hand, nearly everything that Sweden had to sell from 1939 on was eagerly snapped up by one side or the other, subject only to the difficulties of delivery. As a result, Sweden stood in 1946 as one of the few more or less sound and intact states of Europe.

Although ancestors of today's Swedes lived in the area as long ago as 5,000 years,

little of Sweden is known before the 10th century. Early in the 11th century, King Olaf Skottkonung united Sweden into a strong nation and established Christianity. In 1397 Sweden was united with Norway and Denmark under the Kalmar Union. After the killing of several Swedish nobles by Christian II of Denmark in 1520, the Swedes revolted under the leadership of Gustavus Vasa. Gustavus, elected king in 1523, founded the modern Swedish state and was the first European monarch to break relations with the Pope.

By the treaty of Westphalia (1648) which concluded the Thirty Years War, Sweden acquired important German areas including large portions of Pomerania. In 1700 Poland, Denmark and Russia united against Sweden. When peace was finally concluded in 1721, Sweden gave up Livonia, Esthonia, Ingria and parts of Finland. Sweden participated in the coalition against Napoleon (1805-1807) but in 1809 Finland was lost to Russia. After the ouster of King Gustavus IV in 1809, a constitutional law still in effect was adopted after which Charles XIII, uncle of the deposed king was elected king. Since Charles XIII was childless, one of Napoleon's marshals, Jean Bernadotte, was elected Crown Prince and took over effective control of the government, succeeding to the throne in 1818 as Charles XIV John. By the Peace of Kiel (1814) Denmark was forced to cede Norway to Sweden and the two countries were joined in a personal union. The union with Norway was peaceably dissolved in 1905. Neutrality was maintained throughout World War I, although the country suffered severely from the allied blockade and the sinking of merchant vessels. Sweden cooperated completely with the League of Nations and has led the movement for Inter-Scandinavian consultations since 1914. The predominant political group since World War I has been the Social Democratic Party—a moderate group adhering to the 2nd Internationale. In 1936 Per Albin Hansson formed a Social Democrat ministry which gave way on December 12, 1939 to a national coalition cabinet under his leadership. Neutrality was again maintained during World War II. On July 31, 1945 another wholly Social Democrat Cabinet was formed by Per Albin Hansson, who died in 1946.

SOVEREIGN. Gustav V, born June 16, 1858, succeeded to the throne Dec. 8, 1907. He was married 1881 to Princess Victoria (born 1862, died 1930), daughter of Friedrich, Grand Duke of Baden. Crown Prince, Gustav Adolf, born Nov. 11, 1882, married (1) 1905 to Princess Margaret Victoria (born 1882, died 1920), daughter of the Duke of Connaught; (2) 1923 to Princess Louise of Battenberg, born 1889. Offspring of first marriage, Prince Gustav Adolf born April 22, 1906, married 1932 to Sibylle, Princess

of Saxe-Coburg and Gotha. King Gustav's second son is Prince Wilhelm, born 1884. He also has 3 brothers.

NATIONAL GOVERNMENT. Sweden is a limited monarchy. Executive and judicial authority is vested in the King alone but his resolutions must be taken in the presence of the Council of State (cabinet), headed by the prime minister, appointed by the King but responsible to the Riksdag.

The Riksdag has an upper house of 150 members elected by the provincial and municipal councils for eight years, one-eighth being renewed each year. The lower chamber of 230 members is directly elected by popular vote for four years. There is universal suffrage for men and women over twenty-three. The king has the right to initiate legislation, and has an absolute veto over any bills except taxation bills.

RIKSDAG

Parties	Upper Chamber*	Lower Chamber†
Social Democratic	84	115
Conservative	23	39
Agrarian	21	35
Liberal	14	26
Communist	3	15
	150	230

*One-eighth elected each year.

†Election of September, 1944

PROVINCIAL GOVERNMENT. Sweden is divided into 25 administrative districts (län). Each district has a locally elected council or landsting and is headed by a governor appointed by the national government. Seven of the largest towns are administered separately by municipal councils.

JUDICIARY. The administration of justice is entirely separate from the government. The highest court is the Supreme Court; there are 4 high court districts and 186 district court divisions.

DEFENSE. Military service is compulsory from the ages of 20 to 47; the initial training period is 15 months. The King is commander in chief of all the armed forces. Under him is a commander in chief heading the 3 services. The standing army numbered 350,000 and reserves, 275,000 in 1940. The army is well-equipped with the latest type weapons, many of them developed in Sweden. The air force had 3,000 personnel and 257 planes. The Navy on Dec. 31, 1945 had 4 cruisers, 7 coast defense ships, 27 destroyers and large torpedo boats, 26 submarines, 2 minelayers and numerous smaller craft. Naval personnel numbers about 12,000 in addition to the coast artillery which is under naval jurisdiction.

EDUCATION. Public elementary education

has been free and compulsory since 1882. The school age is from 7 to 14. In 1942 there were 529,750 pupils in the regular elementary schools, 53,868 students in secondary schools. The two universities—Uppsala (founded 1477) and Lund (1668)—and three other schools of university grade had a total enrollment of 8,937 in 1944. The state also provides a large number of special vocational and continuation schools. The national church is the Swedish Lutheran Church of which the King is the supreme administrator.

POPULATION. The average annual birth rate (1936-38) was 14.5; the average annual death rate, 11.8. Emigration, especially to the United States, increased rapidly after 1860, reaching its maximum during the period from 1881 to 1890 when the average was 37,640 per year. About 600,000 Swedes have emigrated to the United States. Immigration has exceeded emigration for the past few years.

SOCIAL WELFARE. The extremely well-developed cooperative movement is a powerful factor in the country's economic life. The cooperatives account for about 11 percent of the total retail trade and over 20 percent of the grocery business. Social reform, also well-advanced, includes unemployment relief, loans and grants for housing, medical care, care of the indigent and the aged, and a public works program to curtail unemployment.

AGRICULTURE. Grain, hay, potatoes and sugar beets are major products of the broad fertile plains of the south; cattle raising and dairy farming predominate in the north. The 1944 livestock census showed 603,867 horses, 2,858,949 cattle, 553,290 sheep, 1,053,865 swine. Butter production in 1942 was 72,043 metric tons; cheese, 14,522 tons.

MAJOR AGRICULTURAL CROPS, 1943

Crop	Acres	Tons
Barley	279,510	256,418
Grain (mixed)	683,706	545,288
Hay	4,113,983	4,709,731
Legumes	96,587	57,888
Oats	1,419,840	837,297
Potatoes	368,848	2,393,228
Root crops (fodder)	159,478	2,499,308
Rye	543,244	446,158
Sugar beets	124,327	2,059,378
Wheat	663,356	577,848

INDUSTRY. Industrial establishments in 1942 numbered 19,955 with 580,773 workers. The highly specialized machine industry produces separators, motors, electrical machines and apparatus, agricultural machinery, ball bearings, telephonic equipment and harbor works. There are also large woollen, glass and porcelain industries. Shipyards build both for Sweden and foreign fleets. The timber and wood

working industries are extensive. The match industry with 8 factories is one single trust which now covers the whole world and, with the help of British and American capital, monopolizes the production of matches in most countries. The total value of the output of Swedish industry in 1939 was almost \$2,000,000,000.

TRADE. Imports in 1944 amounted to 1,777,382,000 kroner and exports to 853,096,000 kroner. Of the 1943 exports, 45.5 percent were minerals and metals (including manufactures), 34.7 percent were food goods, pulp, paper and products thereof, 15.2 percent were machinery, transportation equipment and instruments. Of the imports, 30.5 percent were minerals and metals (including manufactures), 20.0 percent were animal and vegetable products, 18.8 percent were hides and skins, rubber, textile materials and products and 18.3 percent were machinery, transportation equipment and instruments. Almost half of the trade was carried on with Germany; the rest was carried on with the Allies and Baltic countries, Switzerland, the Balkans and Italy.

COMMUNICATIONS. In 1945 the merchant marine totaled 1,555,300 gross tons, largely efficient motor vessels. The chief port is Göteborg, followed closely by Stockholm. The highly developed railway network totaled 10,231 miles in 1941; by 1943 the electrified lines comprised half the trackage and carried 85 percent of the freight volume. In 1943 there were 55,550 miles of road, mostly improved. By means of ferry steamers, Swedish state railways are in direct communication both with Germany and Denmark. Telephones in 1943 numbered 1,075,000 (165 per 1,000 persons), making the telephone system second only to the United States on a per capita basis.

FINANCE. Expenditures (1944-45) were estimated at 4,416,061,000 kr. and revenues at 3,186,448,700 kr. The national debt (July 31, 1945) totaled 11,163,800,000 kr. Defense expenditures accounted for almost 50 percent of the 1944-45 budget. The Riksbank or National Bank of Sweden, belonging entirely to the state, is the sole bank of issue.

TOPOGRAPHY. Sweden, with extreme length of 990 miles and breadth of 250 miles, slopes eastward and southward from its peak elevation in the Kjölen mountains along the Norwegian border. In the north are mountains and many lakes. To the south and east are central lowlands, and south of them are fertile areas of forest, valley and plains. Along Sweden's rocky coast, chopped up extensively by bays and inlets, are many islands, the largest of which are Gotland (1,220 square miles) and Ömmland (519 square miles.) Fifteen percent of Sweden is within the Arctic Circle, but the country is land-

locked to the north. Eight percent of Sweden is covered by lakes—a larger percentage than in any other European country except Finland. Most of the rivers are in the north and west, draining into the Gulf of Bothnia.

MINERALS. Sweden's iron ore deposits are among the world's richest, especially for quality. Those in central Sweden produce principally for domestic use, while the ones in Lapland to the north are worked largely for export, with much of the output being shipped through the Norwegian port of Narvik. Production for 1941 in long tons was: iron ore, 10,527,889; iron and steel, 1,165,593; bar iron and steel, 821,547. Gold production in 1939 was 2,149,242 ounces; and silver, 7,226,928 ounces. Other important minerals are copper, arsenic ore, manganese, lead, pyrite ore and zinc. Coal production—400,000 tons a year—is small comparatively and forces large scale imports, nearly eight million tons a year. Wood and peat are extensively used as fuel. Sweden's many waterfalls have an estimated potential of 4,500,000 horsepower. The largest hydroelectric works are state-owned.

FORESTS. About 60 percent of Sweden is forested, mostly in pine, and vast forest products industries are at work in the north, floating logs eastward to sawmills and factories on the Bothnian coast. Sweden, with about 3,000 sawmills and wood-goods factories and 430 pulp and paper mills employing 100,000 men, supplies 25 percent of the world's mechanical pulp and 50 percent of the world's chemical pulp. To protect that great natural asset, scientific forestry is well advanced.

FISHERIES. Sweden's average annual catch is about 140,000 tons, half of it in small Baltic herring. Cod, mackerel and sprat also are taken in the Baltic, and the inland lakes and rivers are well stocked with salmon, trout and perch. The fish catch in 1938 was valued at \$7,827,544.

Switzerland (Republic)

(Schweiz-Suisse-Svizzera)

Area: 15,940 square miles.

Population (est. 1945): 4,343,000.

Density per square mile: 272.4.

President (1946): Dr. Philipp Etter.

Principal cities (census 1941): Zürich, 336,395 (textiles, banking); Basel, 162,105 (RR center, Rhine port); Bern, 130,331 (capital); Genève (Geneva), 124,431 (intellectual center).

Monetary unit: Swiss franc.

Racial stock*: Swiss, 91.2%; German, 3.6%; Italian, 3.1%; French, .9%; Others, 1.2%.

Languages (1930): German, 71.9%; French, 20.4%; Italian, 6.0%; Romansch, 1.1%.

Religions (1930): Protestant, 57.3%; Roman Catholic, 41%; Jewish, .4%; Others, 1.7%.

*By place of birth.

Switzerland, twice the size of New Jersey, is a tourist mecca, but its rugged scenery is more than a commercial asset. Europe's aggressors for centuries, right up through World War II, have usually left Switzerland in peace, largely because the cost of its conquest against the formidable natural barriers would be excessive.

Swiss history is principally the story of the drawing together of various fiefs of the Holy Roman Empire into a single union. The process began in 1291, with the cantons of Uri, Schwyz and Nidwalden as the nucleus. Over the next 300 years, ten new cantons entered the federation which nominally remained as part of the Holy Roman Empire until the Treaty of Westphalia gave it independence in 1648.

The French revolutionary army succeeded in occupying Switzerland in 1798 and organized it as the Helvetic Republic, but Napoleon restored the federation in 1803. After the addition of three more cantons in 1814, the Congress of Vienna declared Switzerland an independent, neutral state in perpetuity, and fixed the nation's borders as they exist today. Out of the brief Swiss civil war of 1847 came the democratic constitution of 1848, which was influenced by the U. S. Constitution.

Switzerland maintained strict neutrality in World Wars I and II, during which Swiss diplomatic delegations represented the interests of many of the belligerents. Both the Allies and Germany bombed several Swiss cities by mistake in World War II. The accidental U. S. raid of April 1, 1944, on Schaffhausen killed fifty persons and injured several hundred.

Since the adoption, in 1874, of their constitution, the Swiss have had a federation of twenty-two sovereign cantons. Each canton has its own legislature, executive and judiciary departments, and the cantons have the right of veto over federal legislation through the referendum.

The federal legislative assembly has two houses—a Council of State of forty-four members, two from each canton, and a National Council of 194 members elected for four-year terms. The seven members of the cabinet are elected for four years by the federal assembly, which also elects the Swiss president from among its own members for a period of one year. The federal government is supreme in matters of war, peace and treaties, and regulates the army, railroads, postal service, mints and national bank note issues.

In peacetime, the highest Swiss army officer is a colonel. In wartime a commander in chief is named with rank of general. Since the army is a national militia, it maintains no standing forces, but military service is compulsory from the ages of eighteen to sixty, with an initial training period of about three months and

an eleven-day refresher course once a year. The force of men trained and physically fit is about 650,000. The air force has 5,000 personnel and 220 planes, maintained under the general staff.

Primary education is compulsory and free. In 1943 primary schools had 443,161 pupils, and secondary and lower middle schools had 73,387. There are seven universities with total enrollment of 11,781 in 1944.

Religious freedom is guaranteed under the constitution. German, Italian and French were recognized as national languages in 1874, and Romansch, a dialect of the Alpine regions, was also made official in 1937. The average annual birth rate was estimated at 19.6 in 1943; the death rate, 11.3.

With nearly a fourth of its land unproductive, and with half of it in pasture or forest area, Switzerland is dependent on imports for food supply.

Wheat, potatoes, fruits, cereal, sugar beets and grapes are grown but stock raising and dairy farming account for three-fourths of the agricultural production. In 1944 there were 1,497,436 cattle, 209,075 sheep, 218,485 goats and 599,528 pigs. Production of cheese in 1943 was 11,300 metric tons. Slightly over 20 percent of the population is engaged in agriculture.

Manufacturing is the principal economic activity, with over 40 percent of the population being sustained by manufactures and mechanical pursuits. Industry is conducted largely in small plants using highly skilled workers. Almost all the raw materials are imported, and products consist almost exclusively of high grade, expensive commodities. In 1939 there were 244,000 industrial establishments with 1,285,493 workers. Leading manufactures include chemical products, machines, watches, textiles, aluminum, apparatus and instruments, shoes and fine handmade embroidery. Chief agricultural industries are the manufacture of fine cheeses and condensed milk. With its many scenic attractions, Switzerland draws the heaviest and most profitable tourist trade in Europe. 43,000 Swiss are normally employed in the hotel industry whose receipts normally exceed \$50,000,000 a year.

Switzerland is dependent on foreign trade for its prosperity. Exports in 1944 totaled 1,473,700,000 francs of which 28 percent went to the United States. Imports in 1945 totaled 1,225,400,000 francs. In 1939 Germany accounted for 23.3 percent of the imports and 14.8 percent of the exports. The major exports are watches and machines, followed by dyes, aluminum, drugs, cotton goods, instruments and apparatus, chemical products and cheese. Major imports are coal (1939: 4,373,000

tons), industrial chemicals, iron and steel, wheat (1939: 551,000 tons), other cereals, machines, iron and steel manufactures and raw cotton.

The Rhine, navigable from Basel to the North Sea, is the principle inland waterway; in 1938 it carried 2,981,190 tons of freight. Railways built over rugged terrain entailing construction of many bridges and tunnels totaled 3,218 miles in 1945, mostly electrified. Traffic in 1943 was 20,-643,000 metric tons. The railroads are of great strategic importance in communications between Germany and Italy. Road mileage totals about 10,200 miles. State aerial service is gradually being developed. Telephones numbered 567,517 in 1944.

Revenue in 1944 was estimated at 389,-300,000 francs and expenditures, 512,600,000 francs. The total public debt of the confederation amounted to 6,174,614,085 francs (including the railroad debt, 8,343,-805,385 francs). The Swiss National Bank, the sole bank of issue, had 4,502,300,000 francs in gold and 249,200,000 francs in other assets in 1945. Swiss investments in the United States in 1938 totaled \$2,500,-000,000.

Most of Switzerland is an irregular, mountainous plateau bordered by the great bulk of the Alps on the south, by the Jura Mountains on the northwest. Its greatest length is 226 miles, greatest width, 137 miles. A fourth of its total area is covered by mountains and glaciers which make the beautiful scenery that draws the country's great tourist trade. The highest peaks are Monte Rosa (15,196 feet) and Matterhorn (14,780), both on the Italian border, and the Jungfrau (13,667 feet), south of Interlaken. The sources of the Rhine, Rhone and Aar are in Switzerland. The country's largest lakes, Geneva, Constance, Boden See and Maggiore, straddle the French, German, Austrian and Italian borders, respectively. Neuchatel, 92 square miles, is the largest wholly Swiss lake. Switzerland has hundreds of beautiful waterfalls. The one on the Rhine, near Schaffhausen, is a hundred feet high and 340 feet wide. Many others are higher but have less volume.

The climate is temperate and varies greatly with altitude. January, for example, averages 31.8 degrees at Basel which is 909 feet in elevation, and 16.2 degrees at Santis, with altitude of 8,202 feet.

Swiss minerals are negligible, except for aluminum whose production totaled 5,500 tons in 1944. Small amounts of iron, gold and coal also are found. Nearly 25 percent of the country is covered by forest, mainly pine, fir and larch but with great patches of oak, beech and maple in the lower altitudes.

Syria (Republic)

Area: 73,587 square miles.

Population (est. 1942): 2,800,000.

Density per square mile: 38.0.

President: Shukri el Quwatli.

Prime Minister: Saadullah Jabry.

Principal cities (census 1935): Damascus (Damas) 193,912 (capital); Aleppo (Alep), 177,313 (northern trading center); Homs, 52,-792 (farming, silk); Hama, 39,960 (Bedouin trading center).

Monetary unit: Syrian-Lebanese pound.

Racial stock: Arab, Armenian, Circassian, Kurd, Turkish, French.

Languages: Arabic, Aramaic, French.

Religions (1938): Moslem (Sunni), 69.8%; Moslem (Alawite), 11.0%; Greek Orthodox, 4.6%; Armenian Orthodox, 3.5%; Moslem (Druze), 3.1%; Others (Syrian Orthodox and Catholic, Greek and Armenian Catholic, Israelite, etc.), 7.9%.

Ancient Syria was conquered by Egypt in 1500 B. C., and after that by Hebrews, Phoenicians, Assyrians, Chaldeans, Persians and Greeks. From 64 B. C. until the Arab conquest in 636 A. D., it was part of the Roman Empire. The Arabs made it a trade center for their whole empire, but it suffered severely from the Mongol invasion in 1260, and fell to the Ottoman Turks in 1560. Syria remained a Turkish province until World War I.

A secret Anglo-French pact of 1916 put Syria in a French zone of influence. The League of Nations gave France a mandate over Syria, but the French had to enforce this with troops to put down several nationalist uprisings. In 1930, France recognized Syria as an independent republic, but still subject to the mandate. After nationalist demonstrations in 1939, the French high commissioner suspended the Syrian constitution, and then in 1941 British and Free French forces had to invade Syria to take it away from Vichy control. During the rest of World War II, Syria was an Allied base. Again in 1945, nationalist demonstrations broke into actual fighting and British troops were rushed in to reinforce the French garrisons. Later in 1946, after restoration of order, preparations were made to withdraw both British and French troops from Syria.

Present-day Syria has a one-house legislature popularly elected for four years by male citizens over twenty. The prime minister and cabinet exercise executive power; the president, elected by the legislature, serves a five-year term. Latakia in the northwest and Jebel Druze in the south are part of Syria but have considerable autonomy. The Syrian army is being organized around a cadre of special troops transferred from French to Syrian jurisdiction in August, 1945.

Primary education is compulsory. In 1938, Syria (including Lebanon) had 2,654 elementary schools with 279,598 pupils, 155

technical schools with 17,984 pupils, and 33 secondary schools with 1,584 pupils. There is a university at Damascus. Syria's division into mutually distrustful religions and sects is a seriously weakening factor. Most of the population is of Semitic origin and speaks Arabic, but there are wide variations of dialect among localities.

Agriculture and animal breeding are the main industries. Only half the land is arable, only a third is actually cultivated. Most crops require irrigation. In 1945 Syria (including Lebanon) grew 443,493 metric tons of wheat, 274,168 metric tons of barley, and millet, sorghum, lentils, chickpeas, beans, rice, sesame, olives, potatoes, onions, fruit, cotton and tobacco. A total of 400 tons of silk cocoons were produced in 1945.

Stock raising is important among the nomadic and seminomadic tribes. In 1943 there were 2,492,000 sheep, 1,583,000 goats, 54,000 camels, 490,000 cattle and 287,000 asses. Wool output averages about 3,000 tons a year.

Industry is small scale and confined to the manufacture of such consumer goods as flour, oil, soap, tobacco products, shoes and thread.

Exports from Syria (and Lebanon) in 1945 totaled £SL 43,842,000. Imports were £SL 130,624,000. Textiles, fruit, vegetables, tobacco and wool were leading exports; cloth, oil and foodstuffs were major imports.

Syria (and Lebanon) had in 1939 a total of 7,072 miles of highway, and 872 miles of railway, including a stretch of the Berlin-to-Baghdad line near Aleppo, and the Hejaz line south from Damascus.

The 1946 Syrian budget balanced at £SL 129,747,000, of which 25 percent was for defense, 15 percent for public works, and 9 percent for education.

Coastal Syria is a narrow plain. Back of that is a range of coastal mountains, and back of that is a steppe area. In the east is the Syrian Desert, and in the southeast next to Trans-Jordan is the Jebel Druse Range rising to heights of nearly 5,800 feet. The climate is subtropical, with rainfall averaging fifty inches on the coastal range but diminishing to less than four inches in parts of the desert.

Known minerals are few, although gypsum is widely distributed, and there are indications of phosphates, antimony, copper, lead, nickel and chrome. Building materials are plentiful.

Trans-Jordan (Kingdom)

Area: 34,740 square miles.

Population (est.): 400,000.

Density per square mile: 11.6.

Ruler: King Abdullah ibn Hussein.

Prime Minister: Ibrahim Hachem Pasha.

Principal city: Amman, 25,000 (capital).

Monetary unit: Palestinian pound.

Racial stock: Arab.

Language: Arabic.

Religions: Moslem (Sunni) except about 30,000 native Christians and 7,000 Circassians.

An ancient land, the size of Maine, what is now Trans-Jordan was known in the time of Moses as Edom and Moab. It passed to the Amorites of Damascus and in 106 B. C. became part of the Roman province of Arabia. In 636 A. D. it was conquered by the Arabs and a period of decline and depopulation and soil-erosion ensued.

Conquered by the British in World War I, Trans-Jordan was separated from the Palestine mandate in 1920, and placed in 1921 under the rule of Emir Abdullah. In 1923 Britain recognized Trans-Jordan's independence, subject to the mandate. In World War II Trans-Jordan cooperated completely with Britain. In March of 1941 it became a charter member of the Arab League. In March of 1946, Britain revoked the mandate and recognized full and complete independence of Trans-Jordan. On June 1, 1946, Emir Abdullah was proclaimed king.

The present ruler, King Abdullah ibn Hussein, was born in Mecca, 1882, the second son of the late King Hussein of the Hejaz and elder brother of the late King Feisal of Iraq.

Trans-Jordan is a constitutional monarchy. By reforms effected in 1939 the King rules with the aid of a cabinet of department heads responsible to him, and an elected Legislative Council of 20. Defense of the country is entrusted to the Arab Legion and the Trans-Jordan Frontier Force. An annex to the treaty of Mar. 22, 1946 specified that Britain should provide officers, financial assistance and arms and equipment for Trans-Jordan forces. Britain also reserved the right under the treaty to maintain troops in Trans-Jordan and there are several Royal Air Force bases.

The economic life is primitive; there are estimated to be 50,000 nomads and 120,000 seminomads. At least 95 percent of the total area is deserted. Illiteracy is widespread; in 1939 the 191 schools had 13,850 pupils.

Most of the country is suitable only for pasturing sheep, goats and camels. Cultivated land is limited to a relatively small area west of the Hejaz Railway. Crops include wheat, barley, tobacco, beans and peas, and in irrigated areas, vegetables and fruits—especially bananas and oranges. In the drier cultivated areas of the plateau, the inhabitants retain tribal organization and still live in tents. Foreign trade is limited to the exchange of wheat, fresh fruit, wool and live animals for sugar, tea, and other necessities.

Despite the sparse settlement of the country, it has good roads connecting the principal towns with Palestine, Syria and Iraq (total 1943: 1,400 miles). Of less importance is the Hejaz railroad running from north to south at the brink of the desert. The Cairo-Baghdad air route crosses the country from west to east.

The 1940-41 revenue was £P388,455 plus grants-in-aid from the British government of £P95,110 with expenditures of £P465,807 in the ordinary and £P44,766 in the extraordinary budget. The public debt in 1940 was £P155,107.

Trans-Jordan is mainly a plateau with an average altitude of 3,000 feet, sloping gently eastward. The western edge is a steep slope overlooking the Rift Valley (Jordan River, Dead Sea, and Wadi El Araba) 3,000-4,000 feet below. In the south are mountains over 5,000 feet high and a sandstone area cut by deep canyons. The subtropical steppe and desert has wet cold winters and dry hot summers. Rainfall near the escarpment decreases from about 26 inches in the north to 10 inches in the south, but averages under 5 inches in the desert to the east.

Deposits of iron, manganese, ochre and phosphates exist but building materials and salt from the Dead Sea are the only minerals worked commercially.

Turkey (Republic)

(Türkiye Cumhuriyeti)

Area: 296,500 square miles.

Population (census 1945): 18,871,000.

Density per square mile: 63.6.

President: Gen. İsmet İnönü.

Prime Minister: Recep Peker.

Principal cities (census 1945): İstanbul, 793,946 (chief port, commercial center); Smyrna (İzmir), 183,762 (seaport); Angora (Ankara), 157,242 (capital); Adana (Seyhan), 88,119 (agricultural center); Brusa, 77,598 (silk, carpets); Eskişehir, 60,742 (trading center).

Monetary unit: Turkish pound (£T).

Racial stock (1935, by place of birth): Turkish, 94.0%; Greek, 2.2%; Bulgarian, 1.4%; Yugoslavian, .9%; Others, 1.5%.

Language: See Racial stock.

Religions (1935): Mohammedan, 98.6%; Others, 1.4%.

HISTORY. The first appearance of the Ottoman Turks in history dates from the early 15th century. The first sultan of the Ottoman Turks was Othman or Osman (1288-1326) who proclaimed his independence in about 1299 from the Seljuk Turks, then in control of Asia Minor. Osman's son, Orkhan (1326-1359), who captured Gallipoli in 1355, organized the Janissaries, a force of mercenaries composed of captured Christian boys raised as Mohammedans. For 200 years after the rule of Orkhan,

each sultan kept adding to the conquests of his predecessors. In 1361 Adrianople was seized, and in 1364 Philippopolis was captured and Bulgaria became a vassal state. With the defeat of the Serbs at the battle of Kossovo (1389) the Turks became masters of the Balkan Peninsula. Although they were routed by Timur and his Mongol horde in 1420, they still added Macedonia and part of Greece to their possessions under the rule of Murad II (1421-1451). Finally, under Mohammed II the Conqueror, Turkish forces took Constantinople (1453) and brought an end to the Byzantine Empire. In 1517 Selim the Grim conquered Syria and Egypt. His successor, Solymon the Magnificent, took Budapest, laid siege to Vienna and brought the empire to the height of its power. Its boundaries now stretched from the Persian Gulf to the frontiers of Poland and from the shores of the Caspian Sea to Oran in western Algeria.

Turkey's decline began in 1571 when the Turkish navy was overwhelmed at Lepanto by the Holy League, formed by the union of Venice and Spain with the pope. In 1683 Turkish forces besieging Vienna were defeated by a Polish force led by John Sobieski and Budapest and Belgrade were lost. During the next 200 years Turkey in Europe became a pawn in the political maneuvers of the great European powers. In the 18th century Russia recovered the northern and eastern shores of the Black Sea and made herself the official protector of the Balkan Christians. Fear of a Russian drive on Constantinople prompted England and France to declare war on Russia, and the Crimean War (1854-56) followed. As a result of the Russian-Turkish war of 1877-78, Bulgaria became practically independent and Rumania threw off her nominal allegiance to the sultan. More substantial Turkish concessions were reversed by the Great Powers at the Congress of Berlin (1878). Further defeats were suffered by Turkey in the Italian and Balkan Wars (1911-13). Meanwhile, a revolt led by the Young Turks, an organization of young liberals, forced the abdication of Sultan Abdul Hamid and established a constitutional regime with accompanying reorganization of the government.

On August 2, 1914 a secret alliance was signed between Germany and Turkey whose army was advised by a German military mission and in September the allies declared war. Turkish forces successfully defended the strategic Dardanelles but British forces seized Egypt, Palestine, Mesopotamia and Syria, and the Hejaz revolted. By 1918 allied forces held the territory along the Dardanelles and the Bosphorus and later Greek forces occupied Smyrna and vicinity. In 1919 the new Nationalist party, headed by Mustapha Kemal was organized to resist the allied occupa-

tion, and in 1920 a National Assembly elected Mustapha Kemal president both of the assembly and of the government. The sultan's government continued to function in Constantinople. Under Mustapha Kemal's leadership, the Nationalist government was recognized by foreign powers, the Greeks were driven out of Smyrna and other allied forces were withdrawn. The present boundaries of Turkey (with the exception of Alexandretta) were fixed by the Treaty of Lausanne (1923) and later negotiations. The caliphate and sultanate were separated and the sultanate abolished on October 1, 1922. On October 29, 1923, Turkey formally became a republic with Mustapha Kemal, who took the name of Kemal Atatürk as its first president. He carried out an extensive program of reform, modernization, and industrialization.

The multilateral Montreux Convention (July 20, 1936) abrogated a number of provisions of the Treaty of Lausanne relating to the Straits, abolished the international commission established by that treaty to control the Straits and authorized Turkey to militarize the former demilitarized zone in the Straits zone. General Ismet İnönü was elected to succeed Kemal Atatürk on the latter's death in 1938. On October 19, 1939 Turkey concluded a mutual assistance pact with Britain and France. Turkey followed a chauvinistic neutral course during most of World War II but on August 2, 1944 she broke off relations with Germany and on January 3, 1945, with Japan. On February 23, 1945 she declared war on Germany and Japan.

GOVERNMENT. The Constitution, as amended in 1937, defines the Turkish state as "republican, nationalist, populist, étatist, secular, and revolutionary." The President of the Republic is chosen from the deputies of the National Assembly; his term of office is identical with the life of each Assembly. The 455 members of the Assembly are elected by universal suffrage for a term of four years. According to the Constitution, the Assembly exercises the executive power through the President and Council of Ministers (cabinet) appointed by him. It may at any time control the actions of the government and at any time dismiss it. The principal political party is the nationalistic Republican People's Party.

Turkey is divided for administrative purposes into 63 vilayets which are divided into kazas, subdivided in turn into nahiyes. Each vilayet has an elected council but centralization is the basis of the governmental system.

The pre-republic judicial system was based on the Sunni Moslem law which was religious in origin. Under the republic a new judicial system was organized and in 1926 a civil code was established, based

and modeled upon the present Swiss code. The judiciary system consists of (1) police or local justice courts; (2) district courts; (3) assize courts for serious criminal offenses; and (4) the court of cassation, which is the only court of appeal.

Military service is compulsory from 20 to 45; the initial training period is three years. The strength of the army on a mobilized basis is from 500,000 to 650,000. The army's pre-war equipment was largely obsolete, but large purchases of modern materials were made during World War II. The air force, under the direct control of the Turkish General Staff, had a strength of 370 first-line aircraft and personnel of about 8,500 in 1940. The navy (December 31, 1945) had 1 battle cruiser (the former German ship *Göben* launched in 1911), 2 outdated cruisers, 6 destroyers and larger torpedo boats, and 9 submarines.

SOCIAL AND ECONOMIC CONDITIONS. Elementary education is nominally obligatory from seven to sixteen. According to the census of 1935 only 2,517,878 of the population were literate in the Latin alphabet which replaced the Arabic script. Only 23.3 percent of the male population and 8.2 percent of the female population could read and write. In 1942 there were 11,413 schools with 769,555 male and 331,706 female students. There were twenty institutions of higher learning with 11,771 male and 3,099 women students, including the University of Istanbul, founded in 1900.

MAJOR AGRICULTURAL CROPS, 1940

Crop	Acres	Tons
Barley	12,342,590	2,529,770
Corn	1,172,585	700,900
Cotton	725,945	241,840
Olives	1,729,000*	13,220
Potatoes	1,793,220	241,400
Rye	2,897,310	699,960
Tobacco	202,540	72,750
Wheat	24,534,510	4,634,060

*1938.

Agriculture is the principal industry employing about 65 percent of the population according to the 1935 census. Only about 20 percent of the land is under cultivation, but the government has made great efforts to modernize and improve the industry. The most important crop is tobacco, with the best quality coming from the Pontic coast near Samsun and also from Bafra, Sinope and Trebizond. Cereals provide about 75 percent of the country's needs. Cotton is grown largely in the south of Asia Minor while figs come exclusively from the Smyrna region. Turkey is a leading exporter of olive oil; the Brusa region and the Ionian coast are the principal areas of cultivation. Opium poppies are

rown in the Smyrna, Malatia and Tokat regions.

Turkey is rich in livestock. The most important animal is the goat, of which there were 8,832,000 ordinary goats in 1942 besides the valuable Angora goat (3,703,000) which thrives on the uplands of the plateau. There were also 690,000 buffaloes, 7,888,000 cattle, 763,000 horses, 1,424,000 mules and asses and 17,211,000 sheep.

In 1936 Turkey had 65,245 industrial establishments employing 256,855 people. A five-year plan for the industrialization of the country was initiated in 1934 with the objective of making Turkey economically independent. Staple industries have been established in iron and steel, textiles, paper, glass, sugar and cement. The estimated annual output of the Karabuk iron and steel plant is 219,000 metric tons of pig iron, 150,000 of rolled steel products, and 171,900 of steel ingots.

Imports in 1943 amounted to £T 203,000,000 and exports, £T 247,000,000. Before World War II Turkey's chief supplier was Germany followed by the United States, Italy and Great Britain. The principal exports (1940) were tobacco (leaf) 21.7 percent, cotton 7.4 percent, hazelnuts 5.9 percent, sultanas 4.1 percent, and mohair 5.9 percent. The major imports were mineral oils 15.3 percent, machinery and parts 12.9 percent, iron and steel manufactures 8.7 percent, paper and paper products 5.4 percent, and chemicals 4.9 percent.

In 1942 Turkey had a merchant fleet of 168 vessels with a gross tonnage of 187,556. Coastwise trade is restricted to Turkish vessels. The republic has pushed the development of a good railway system in Asiatic Turkey. The total length of railways at the end of 1943 was 4,609 miles, of which 4,339 miles were owned by the state. Highway mileage (1939) totaled 25,656, of which 10,370 were improved.

Revenue (1944-45) was estimated in £T 570,435,500 and expenditure at £T 570,434,417. On May 31, 1939 (the last published figures) the public debt amounted to £T 619,385,681 of which £T 331,761,471 represented the consolidated debt. After 1939 numerous loans to meet extraordinary expenditures, mostly for defense, swelled the public debt considerably.

NATURAL FEATURES. Turkey is divided into two natural divisions by the historic waterway formed by the Hellespont, the Sea of Marmora and the Bosphorus. Turkey in Europe comprises an area about equal to the state of Massachusetts. It is hilly country drained by the Maritsa River and its tributaries. On the west it is covered by forest and very thinly inhabited but on the east near the Maritsa there is fertile land. Almost all its population is found in and near its two important towns, Istanbul (Constantinople) and Adrianople. Turkey

in Asia, or Anatolia, is roughly a rectangle in shape with its short sides on the east and west. Its center is a treeless plateau, bordered on all sides by a rim of mountains which on the seacoasts drop steeply to a wooded plain some 75 miles wide. On the land frontiers the belt of forest clothes the foothills of the Taurus Mountains and the Armenian highlands.

Turkey has great variety in climates. Along the coast from Antioch to the Dardanelles the climate is Mediterranean, with rainy winters and dry summers. Thence to the Bosphorus it is transitional to the Pontic type of climate, which has heavy year-round rainfall. Semitropical fruits and tea may be grown in the region beyond Trebizond. The western plateau has a harsh steppe climate, with cold winters, hot summers and scanty rainfall while the eastern plateau exhibits a transition from steppe to alpine climate.

Turkey's rich mineral resources are comparatively unexploited, although a five-year plan initiated in 1936 had their development as its objective. Deposits of copper in the large field at Arghana, near Diarbekir on the Iraq-Syrian frontier, have been estimated at 1,600,000 tons (1942 output: 12,278 tons). Turkey is relatively rich in coal with large deposits in the Ereğli region on the Pontic coast some 150 miles from Istanbul (1942 output: 2,509,614 metric tons). A virtual world monopoly is enjoyed in meerschaum, found in the Eskişehir district; 1942 output was 369 cases. Other important minerals, with 1942 output in metric tons, include chrome (130,053); manganese ore (3,313); emery (10,325); and antimony (1,449).

Nearly 9 percent of the total area of Turkey in Asia is forest land, covering 25,419 square miles. A large proportion of Eastern Thrace is also under forest, covering 1,648 square miles. Pines are 37 percent of the total and oaks 14 percent. The forest law of 1937 provides for state control of all forests.

The fisheries constitute an important contribution to the wealth of the country. The passage through the Bosphorus gives opportunities for fishing in the narrow and controlled waters which are of great value.

Union of Soviet Socialist Republics

Area (est.): 8,412,345 square miles* (8,173,550 in 1938).

Population (est.): 195,152,000* (170,467,186 by 1939 census).

Density per square mile: 23.2.

Chairman of Praesidium of Supreme Soviet: Nikolai Shvernik.

Premier: Generalissimo Joseph Vissarionovich Stalin.

Principal cities (census 1939): Moscow, 4,137,018 (capital); Leningrad, 3,191,304 (industrial center, shipbuilding); Kiev, 846,293 (industrial center, Ukraine); Kharkov, 833,432 (iron and steel, coal); Baku, 809,347 (oil center, Azerbaijan); Gorky, 644,166 (iron and steel); Odessa, 604,223 (chief Black Sea port); Tashkent, 585,005 (textiles, tobacco, Uzbek S. S. R.); Tiflis, 519,175 (capital of Georgian S. S. R.); Rostov on Don, 510,253 (grain, shipbuilding).

Monetary unit: Rouble.

Racial stock (1939): Great Russian, 58.4%; Ukrainian, 16.6%; Byelorussian, 3.1%; Uzbek, 2.9%; Tartars, 2.5%; Armenian, Azerbaijani, Georgian (each 1.3%); over 100 others.

Languages: See Racial Stock.

Religions: Russian Orthodox (predominant), Mohammedan, Roman Catholic, Jewish, Lutheran.

*Including 1945 acquisitions.

HISTORY. The recorded history of Russia begins with the perhaps legendary figure of the Viking Rurik, who according to tradition came to Russia in the 9th century and founded the first Russian dynasty at Novgorod. The various tribes were united by the spread of Christianity in the 11th century; Vladimir, "the Saint," adopted the Greek Catholic faith in 988 A. D. During the 11th century the grand dukes of Kiev held such centralizing power as existed. In 1240 Kiev was destroyed by the Mongols and the Russian territory was split into numerous smaller dukedoms, out of which three large centers emerged—Galicia, Moscow and Novgorod. The early dukes of Moscow extended their dominions through their office of tribute collector for the Mongols. In the late 15th century Ivan III, the reigning duke, acquired the rival kingdoms of Novgorod and Tver and threw off the Mongol yoke. Ivan IV, the Terrible (1533-1598), first Muscovite duke to assume the title of Tsar, is considered to have founded the Russian State. He crushed the power of rival princes and boyars (great landowners), but Russia remained largely mediaeval until the reign of Peter the Great (1683-1725), the grandson of the first Romanov tsar, Michael (1613-1645). Peter effected extensive reforms aimed at Westernization and through his defeat of Charles XII (1709) of Sweden, he extended Russian boundaries to the west. Catherine the Great (1729-1796) continued Peter's Westernization program and also expanded Russian territory, acquiring the Crimea and part of Poland. During the reign of Alexander I (1801-25), Napoleon's attempt to subdue Russia was defeated (1812-13) and new territory was gained, including Finland (1809) and Bessarabia (1812). Alexander was the originator of the Holy Alliance which crushed for a time the rising tide of liberalism in Europe. Between the Napoleonic Wars and World War I a few reforms were introduced, but the autocratic power of the Tsars remained unchanged.

During the reign of Alexander II (1855-1881), Russia's borders were pushed to the Pacific and into central Asia. Serfdom was abolished in 1861, but heavy restrictions were imposed on the emancipated serfs. Revolutionary strikes following Russia's defeat in the war with Japan forced Tsar Nicholas II (1894-1917) to grant a representative national body (Duma), elected by narrowly limited suffrage; it met for the first time May 10, 1906. Nicholas continued in his reactionary course, however, and the actions of the overwhelmingly liberal Duma had little or no effect on the government.

World War I demonstrated the corruption and inefficiency of the czarist regime, although the call of patriotism held the poorly equipped army together for a time. Disorders broke out in Petrograd in March, 1917, and, following the winning over of the Petrograd garrison (March 11), the revolution was in full sway. Tsar Nicholas was forced to abdicate under pressure from the Duma, and a provisional government was formed, composed of both conservative and radical elements. This government under the successive premierships of Prince Lvov (March 12) and Alexander Kerensky (August 6), a Menshevik or moderate socialist, soon lost ground to the radical or Bolshevik wing of the Socialist Democratic Labor Party. Finally, on Nov. 7, 1917, came the Second Revolution, engineered by Nikolai Lenin and Leon Trotsky. Their small but well disciplined Bolsheviks following in the Petrograd Soviet and the government was turned over the next day to the Congress of Soviets (councils of soldiers, peasants and workers), which vested the government in a Council of People's Commissars with Lenin as premier and Trotsky as foreign minister. The humiliating Treaty of Brest-Litovsk (March 3, 1918) concluded the war with Germany, but civil war and intervention by foreign powers prevented the new Communist Government from gaining control of all of Russia until 1920.

On July 1, 1923 the vast territory under Soviet rule—previously an inchoate mass whose constituent parts were changing constantly—became the Union of Soviet Socialist Republics, formed by the union of the R. S. F. S. R. and the Ukrainian, Byelorussian and Transcaucasian S. S. R's. The sudden death of Lenin (Jan. 21, 1924) precipitated an intraparty struggle between the group led by Joseph Stalin, general secretary of the party, and the opposition led by Trotsky which favored not only swifter socialization at home but fomentation of revolution abroad. In 1927, Trotsky and other opposition leaders were expelled from the party and exiled. The first Five-Year Plan (1928-32) called for gradual progressive increase in industrial and agricultural production. Its collectivization

program was opposed by the Kulaks, or wealthier peasants, but they were vigorously suppressed. Purges carried out in 1936, 1937 and 1938 removed several prominent leaders of the Revolution as well as high-ranking Army officers.

Soviet foreign policy—first featured by friendship with Germany, and antagonism toward England and France and then (1933) by participation in the League of Nations and an anti-Fascist program—took an abrupt turn on Aug. 24, 1939, with the signing of a Soviet-German nonaggression pact. Territory seized from Poland (Sept. 1939) became part of the Ukrainian and Byelorussian S. S. R.'s; that secured from Finland at the conclusion of the Finnish war, part of the Karelian S. S. R. set up March 31, 1940; that secured from Rumania (Bessarabia and northern Bukovina) part of the Moldavian S. S. R. set up August 1, 1940; and finally the formerly independent states of Estonia, Latvia and Lithuania occupied in June, 1940, were admitted into the U. S. S. R. as the 14th, 15th and 16th Soviet Republics.

Immediately following the German attack (June 22, 1941), all necessary powers for the defense of the state were vested in the State Defense Council headed by Stalin, who had taken over the post of premier on May 6. The Germans quickly seized about 500,000 square miles of Soviet territory, occupying about 10 percent of the Union itself, but the Soviet forces resisted stubbornly, aided by increasing amounts of materiel from the United States and Britain. The great Soviet counteroffensive in the Stalingrad area (Nov. 1942-Feb. 1943) marked the turning point and Soviet troops gradually pushed the Nazis back, with the final stage, the great offensive, begun on January 12, 1945. The nonaggression pact with Japan (1941) was denounced in April 1945, and, following the declaration of war on Japan (Aug. 8, 1945), Soviet Far Eastern forces quickly occupied Manchuria, Karafuto and the Kuriles. With the end of the war the fourth Five-Year Plan was launched in September 1945, with emphasis on the expansion of heavy industry.

GOVERNMENT. Under the Constitution adopted December 5, 1936, the Soviet Union "is a Socialist State of Workers and Peasants" whose highest organ is the Supreme Soviet of the Union which exercises supreme legislative authority. The latter consists of two equal Houses—the Soviet of Nationalities in which each constituent republic has 25 representatives, each autonomous republic 11, each autonomous oblast five, and each national okrug one, and the Soviet of the Union elected on a nationwide basis with one representative for each 300,000 inhabitants. All representatives are elected for four-year terms; the last election was held on February 10, 1946.

Elections amount to a blanket endorsement (or rejection) of a single list of candidates already nominated by the Communist party, youth organizations, collective farms and trade unions. The only election in the Western sense of the word takes place in the selection of the nominees by these groups. All citizens over the age of 18 are enfranchised. The Praesidium of the Supreme Soviet acts as an executive body between the sessions of the Supreme Soviet. It has a chairman (sometimes referred to as the Soviet President), 16 vice chairmen (one for each constituent republic), a secretary and 24 members, all elected by the Supreme Soviet.

The highest executive and administrative power is exercised by the Council of Ministers (formerly People's Commissars) appointed by the Supreme Soviet and headed by a Chairman (premier) and eight vice chairmen. It issues decrees and executive orders on the basis of laws in operation and supervises their execution. The administrative machinery is necessarily vast and complicated, since it is not only responsible for the ordinary administrative functions of government, but also for the operation of State-owned enterprises.

LOCAL GOVERNMENT. The territorial administrative structure is extremely complex. The All-Union organization is paralleled in each of the constituent republics which has its own constitution, its own Supreme Soviet (unicameral), Praesidium, and such ministers as are required for its own affairs. By an amendment adopted on February 1, 1944, each republic is given the right to have separate ministries for defense and foreign affairs, formerly All-Union responsibilities. The constituent Republics are subdivided into autonomous S. S. R.'s, also with Supreme Soviets and Councils of Ministers, regions (*oblast*), territories (*kraj*) and autonomous regions, which are governed by elected executive committees. There are also district, city and village Soviets. The basic administrative unit is the *raion*—roughly comparable to a U. S. county.

JUDICIARY. The highest judicial organ is the Supreme Court of the U. S. S. R., elected by the Supreme Soviet. Supreme Courts of the Union and Autonomous Republics are elected by their respective Supreme Soviets and those of the regional and territorial courts by their respective Soviets. The All-Union Attorney-General, elected by the Supreme Soviet, appoints the prosecutors of the Union and Autonomous Republics and supervises their activities. The Military Collegium of the All-Union Supreme Court exercises original jurisdiction in cases involving the security of the State.

COMMUNIST PARTY. The only political party permitted to exist in the Soviet Union is the All-Union Communist Party

(Bolshevik), which now has over 6,000,000 members. Its organization parallels the entire governmental and economic structure of the country and guides all important action through instructions from the central organs of the Party to Party members who occupy most of the important political and economic positions. Its highest organ is the All-Union Party Congress, which meets irregularly. The Congress elects a Central Committee (71 members, 68 alternates), which in turn elects (1) an executive body (Politburo) with nine members and five alternates, (2) an organizational bureau (Orgburo), which manages the Party, (3) a secretariat composed of five of the Orgburo members, headed by a general secretary (Stalin), and (4) a Committee of Party Control with 31 members.

DEFENSE. Generalissimo Stalin is supreme commander in chief of the Soviet armed forces and Minister of Defense. He is assisted by six deputy ministers. The Red Army, Red Fleet and the air force have separate staffs and commanders operating under his general supervision. Military service is compulsory; the initial training period varies from two to five years. The armed forces, which were estimated to have reached a peak of 15,000,000 in mid-1945, had been reduced to over 5,000,000 men in late August 1946, according to official U. S. sources. This figure included about 3,250,000 in the Red Army, 750,000 in the air force, 500,000 in the N. K. V. D. (secret police organization with paramilitary formations), and 500,000 in the Red Fleet. The latter two still maintained their wartime strength. Over 2,000,000 men were estimated to be outside Soviet borders and about 700,000 in the Soviet Far East (i.e. full wartime strength including Soviet troops in Manchuria and Korea). The air force was believed to have about 20,000 first-line craft. Information about the Red Fleet is as vague as that about the army and air force. It was believed (June, 1946) that it included five battleships (including ex-*H.M.S. Royal Sovereign*), 10 cruisers (including ex-*U.S.S. Milwaukee* and ex-German ship *Nürnberg*), over 100 submarines, more than 50 destroyers, and considerable flotillas of coastal and river craft, patrol vessels, mine sweepers and other ancillary craft. At least one 16-inch-gun battleship (*Treti International*) and one 22,000 ton aircraft carrier (*Krasnaya Znamya*) were nearing completion, and an extensive construction program under the aegis of the fourth Five-Year Plan was in progress.

SOCIAL AND ECONOMIC CONDITIONS.
EDUCATION. The school system throughout the country is based upon uniform text books and the same syllabus, although a number of hours is allowed for native language, literature and history in the non-Russian schools. All schools are State

controlled and compulsory education begins at the age of seven. Coeducation is being abolished and separate schools established for boys and girls. The boys' curriculum stresses military training; the girls' curriculum, housework. Under the Defense Ministry are the newly established Suvorov military schools, residential military schools for the training of future officers. In the academic year 1945-46, 772 colleges and institutions of higher learning were functioning with a student body of 560,000. Literacy was estimated at 81 percent in 1940.

RACIAL STOCK AND POPULATION. According to the Soviet census of 1939, urban and rural workers formed 32.1 percent of the population, urban and rural employees (mainly the white-collar group) 17.5 percent, collective farmers 44.8 percent, and individual peasants 1.7 percent. There are almost 200 different ethnic groups; in 1940 newspapers were published in 70 different languages, and books in 11 different languages.

AGRICULTURE. From a predominantly agricultural country, the Soviet Union has grown in the last 25 years into an industrial-agricultural power, with agriculture making great advances at the same time. The total area under cultivation was 105,000,000 hectares in 1913, 118,000,000 hectares in 1929, and 157,000,000 hectares in 1941.

AREA SOWN TO PRINCIPAL CROPS, 1929, 1938, 1940

(in millions of hectares)

Crop	1929	1938	1940
Grain	96.0	102.5	110.0
Industrial plants	8.8	10.9	11.0
Vegetables, melons and potatoes	7.6	9.4	10.0
Fodder	4.9	14.1	18.0

SELECTED PRODUCTION DATA, 1913, 1929, 1937

(in millions of tons)

Crop	1913	1929	1937
Wheat	26.2	18.8	46.0
Raw cotton	.7	.8	2.0
Flax (average for 5 preceding years)	.2	.4	1.0
Sugar beets	10.9	6.2	21.0
Potatoes	23.3	45.6	65.0

STATISTICS ON ANIMAL INDUSTRY

(millions of head)

Animal	1916	1933	1938
Horses (all)	35.8	16.6	17.0
Cattle	60.6	38.4	63.0
Sheep and goats	121.2	50.2	102.0
Pigs	20.9	12.1	30.0

In 1938 there were 242,400 collective farms (*Kolkhoz*), 3,961 State farms (*Sovkhoz*), 1,300,000 individual farm owners, and 6,358 tractor stations (MTS).

The Union's diverse climate permits the growing of the most varied crops, ranging from the temperate to the subtropical. Production of beet sugar (short tons) in 1940 was 2,365,000; tea, 14,220; raw silk 1,900; (1938) oats, 18,728,000; rye, 23,071,000; barley, 9,039,000; maize, 2,965,000; rice, 349,000; wool, 151,000; citrus fruit, 16,094.

INDUSTRY. Almost all industry in the Soviet Union is carried on by organizations owned or controlled by the State. About 80 percent of the total State industries is controlled by 291 large trusts. The industrialization of the country has been one of the major objectives of its leaders during the past 25 years. The successful completion of the two Five-Year Plans (1928-1932; 1933-37) and of most of the Third (1937-42) saw an amazing increase in the volume and versatility of Soviet industry. The following table reveals the growth of some of the principal industries, expressed in the value of annual production based on prices prevailing in 1926-27.

VALUE OF ANNUAL PRODUCTION OF SOME PRINCIPAL INDUSTRIES

(in millions of rubles)

Industry	1913	1933	1938
Electric light and power	45	855	2,262
Coal	301	839	1,518
Ferrous metallurgy	755	1,616	4,023
Metal working industries	1,446	11,283	33,613
Chemical	457	2,301	6,809
Textile	3,519	6,049	11,255

On January 1, 1936, there were 574,064 industrial enterprises and the value of the output of industry in 1938 was \$9,160,992,-300. Production figures (1938) included 687,000,000 pairs of shoes, 919,428 tons of paper, 161,432 tons of raw textiles, and 4,304,574,065 yards of finished textiles.

The large-scale evacuation of plants to the East and the construction of new plants there during World War II, coupled with the eastward orientation of industry prior to the war, has shifted the balance to newly developed regions in Central Asia and Siberia from the Moscow-Leningrad area and the Ukraine. The Ural region is now the center of Soviet industrial power, accounting for almost all magnesium and aluminum production and over 60 percent of the pig iron and steel production. It includes the great Magnitogorsk, Novo-Tagil, and Orsk Metallurgical Combines, the Chelyabinsk tractor plant, and the Uralvagonzavod and Uralmashzavod machine-building plants. The production of con-

sumers goods continues to be subordinate to the production of heavy capital equipment.

TRADE. Soviet foreign trade is a State monopoly and foreign goods are purchased in accordance with an over-all plan conducted under the supervision of the Foreign Trade Ministry. Connected with the Ministry are a number of export, import, export-import and transport combines through which foreign trade transactions are usually effected.

The U. S. S. R. share in world exports (1938) was 1.1 percent; imports, 1.2 percent. Exports (1938) totaled \$115,000,000, of which 28.2 percent went to the United Kingdom, 8.8 percent to Belgium, 7.3 percent to the U. S., 7.0 percent to the Netherlands, and 6.6 percent to Germany. Imports totaled \$122,780,000, of which 28.5 percent came from the U. S., 16.9 percent from the United Kingdom, 7.2 percent from the Netherlands, 4.8 percent from China and 4.7 percent from Germany. Principal exports were grain 21.9 percent, lumber and timber 16.8 percent, furs 9.9 percent, petroleum and products 7.9 percent, and cotton goods and threads 4.5 percent. Imports included machines and industrial equipment 26.8 percent, iron and steel 10.3 percent, wool 5.3 percent, electrical machines and parts 4.2 percent, and live animals 3.7 percent. From June 22, 1941 until 1945 large supplies were received from Britain and Canada, and after October 1, 1941, from the United States.

LEND-LEASE AID TO THE U. S. S. R., 1941-1945

Source: Twenty-second Report of the President to Congress on Lend-Lease Operations, June 14, 1946.

Category	U. S. dollars
Ammunition	481,953,000
Ordnance	301,795,000
Aircraft	1,189,200,000
Aircraft engines, parts, etc.	375,168,000
Tanks and ordnance vehicles	618,129,000
Motor vehicles and parts	1,150,806,000
Watercraft	689,205,000
Foods	1,726,023,000
Other agricultural products	28,885,000
Machinery	1,576,674,000
Metals	878,996,000
Petroleum products	134,160,000
Other supplies	1,314,248,000
Rental of ships, etc.	473,819,000
Servicing, repair of ships, etc.	120,442,000
Miscellaneous expenses	81,967,000
Total	11,141,470,000

COMMUNICATIONS. The Soviet merchant fleet (*Sovtorgflot*) aggregated about 1,200,000 deadweight tons (Mar. 31, 1946) exclusive of about 400,000 tons received as the Soviet share of the German merchant marine. Merchant ship construction has

been subordinated to naval construction under the fourth Five-Year Plan. U. S.-owned tonnage operated by the U. S. S. R. under lend-lease amounted to 613,950. The principal ports include Leningrad on the Baltic, Murmansk and Archangel on the Barents and White Seas, respectively; Vladivostok on the Sea of Japan; and the Black Sea ports of Odessa, Sevastopol, Novorossiysk and Batum. River and canal transport is extremely important. In 1939 there were 68,310 miles of navigable inland waterways, and 130,410 additional miles suitable for raft and timber. The former include the Volga, Don, Kama and Dnieper wholly within European Russia, and the great rivers of Siberia—the Ob, Yenisei, Lena and Amur. Cargo carried (1938) totaled 73,303,000 tons.

Railway mileage (1938) totaled 51,887, of which about 30 percent was double-tracked. Freight traffic reached 516,300,000 tons and passengers carried, 1,777,800,000 in 1938. Highway mileage (1938) totaled 831,330, of which 29,808 were paved and 24,506 improved gravel roads.

Air traffic is assuming great importance, especially in the central Asiatic portion of the U. S. S. R. Prior to World War II, the network of air routes covered 58,125 miles. In 1945 operations of the Civil Air Fleet tripled those for 1940. Moscow is connected with the capitals of all the Union republics by daily air service, and there are regular services to the Far East and Europe. No foreign air routes have been allowed to enter the U. S. S. R. At the end of 1938 there were 1,461,500 miles of telegraph-telephone wire, 1,272,500 telephones, and 83 radio stations.

FINANCE. Estimates for the 1944 budget balanced at 245,600,000,000 rubles. War expenditure (1944) was estimated at 128,400,000,000 rubles. The Soviet budget includes charges for the financing of industry, transportation, agriculture and commerce—items which ordinarily are handled through private channels in other countries. The internal debt (1939) amounts to \$2,667,369,471.

NATURAL FEATURES AND RESOURCES. TOPOGRAPHY. With almost three times the area of continental United States, the U. S. S. R. is the largest unbroken political unit in the world, occupying more than one-seventh of the land surface of the globe. The greater part of its territory is a vast plain stretching from eastern Europe to the Pacific Ocean. This plain, relieved only occasionally by low mountain ranges (notably the Urals), consists of three zones running east and west: (1) the frozen marshy tundra of the Arctic; (2) the more temperate forest belt; and (3) the steppes or prairies to the south, which in southern Soviet Asia become sandy deserts. The topography is more varied in the South, particularly in the Caucasus between the

Caspian and Black Seas, and in Tien-Shan-Pamir mountain system bordering Afghanistan, Sinkiang and Mongolia. Mountains (Stanovoi) and great rivers (Amur, Yenisei, Lena) also break up the sweep of the plain in Siberia.

CLIMATE. The climate necessarily is varied, but for the most part is continental. In general the climate of the northern and central regions is characterized by long, cold winters and by summers which are shorter and cooler than those in the northern part of the United States. In the southern regions the climate varies between temperate and subtropical. The Uzbeks, Turkmen and Kazakh S. S. R.'s are largely desert and semi-desert areas. In the central belt rainfall is fairly uniform, averaging about 15 inches east of the Urals and 20 inches to the west. In the tundra to the north it drops to about eight inches, and to four inches in the southern regions.

MINERALS. The U. S. S. R. is probably the richest country in the world in mineral resources—containing deposits of almost every known mineral. It ranks fourth in coal production, second or third in pig iron and gold, second in iron ore, third in petroleum, first in platinum, and retains a high rank in the production of numerous other minerals. The richest mineral region is that of the Ural Mountains, which lacks only good coking coal. Other production figures (1940) included aluminum, 160,893,800 pounds; copper, 183,202 tons; gold, 4,250,000 ounces; (1939) lead, 82,673 tons; platinum, 100,000 ounces; (1938) silver, 8,040,000 ounces; tin, 14,330 tons; zinc, 77,161 tons. Petroleum production (1938) was 206,125,000 barrels. Production is centered in the Baku area and at Krasnodor (Maykop) and Grozny in the northern Caucasus; the latter two fields suffered severe war damage.

MINERAL PRODUCTION DATA

(millions of tons)

Product	1913	1933	1938
Coal	29.1	76.3	132.4
Peat	1.7	13.8	26.3
Iron ore	9.2	14.5	26.3
Manganese ore	1.2	1.0	2.1
Pig Iron	4.2	7.1	14.1
Steel	4.2	6.9	18.1

FORESTS. With a forested area of about 3,500,000 square miles, the U. S. S. R. possesses a large proportion of the world's timber reserves. Most of the forested area is in Siberia, but there are also valuable stands in the Caucasus. Production of wood and timber (1934) amounted to 3,519,152,145 cubic feet.

FISHERIES, FURS. The numerous rivers, lakes and surrounding seas (except the Black Sea) are rich in fish; the catch averages over 1,000,000 tons. The acquisition of

former Japanese fisheries in southern Sakhalin, the Kuriles, and Kamchatka will double the output of the Far Eastern fish industry. Trapping is an important secondary industry, especially in eastern Siberia. Furs valued at \$11,386,000 were exported in 1938.

Uruguay (Republic)

(República Oriental del Uruguay)

Area: 72,172 square miles.
Population (est. 1943): 2,202,936.
Density per square mile: 30.28.
President: Tomás Berreta.
Principal cities (est. 1943): Montevideo, 708,123 (capital); Paysandú, 46,000 (meat packing); Salto, 46,000 (cattle raising); Minas, 32,000 (farming center).
Monetary unit: Peso.
Racial stock (est.): White, 86%; Mestizo, 12%; Indian, 2%.
Language: Spanish.
Religion: Roman Catholic.

Uruguay, a country a little larger than North Dakota, has many distinctions. It is the smallest and most densely populated of South American nations. It has one of the highest proportions of white population and one of the lowest illiteracy rates in all Latin America. Despite constant pressure from big Argentina, and some concessions to the powerful neighbor, Uruguay has managed to remain one of the most democratic and progressive of Latin American states.

Juan Díaz de Solís, a Spaniard, discovered Uruguay in 1516, but the Portuguese were first to settle it when they founded Colonia in 1680. After a long struggle, Spain wrested the country from Portugal in 1778. Uruguay revolted against Spain in 1811, only to be conquered by 1820 by the Portuguese from Brazil. Independence was re-asserted with Argentine help and the republic was set up in 1830. There followed a long period of factional strife between two groups still in existence—the Blancos and the Colorados—which dealt in plot and intrigue and bred only financial ruin and political folly. President José Batlle y Ordóñez launched a series of social reforms in 1911-15 which started Uruguay off on its modern career of democracy, although Dr. Gabriel Terra, elected president in 1931, grabbed dictatorial power and modified the constitution to permit reelection.

He was succeeded in 1938 by General Alfredo Baldomir and, in 1943, by Juan José de Amézaga, both of whom worked closely with the United States on global and hemispheric policy. In 1946, Tomás Berreta was elected president. One of Uruguay's backward steps came in July of 1946 when press censorship was decreed, making it an

offense to write in Uruguay anything deemed damaging to a neighbor nation.

Under the 1936 constitution, Uruguay elects every four years a president, vice president, a cabinet and a two-house congress—a 99-member Chamber of Deputies and a 30-member Senate. The president and vice president may not succeed themselves, and the cabinet and congress are chosen by proportional representation. All literate citizens vote, including women who also may sit in congress. For administration, the country divides into nineteen departments. Congress elects the Supreme Court judges.

Service in the army—1940 strength was 8,093—is voluntary, but national guard service is compulsory in war-time. There is a police force of about 5,500, and an air force that had 463 men and forty-five planes in 1939. The navy had a 1,150-ton sloop, a surveying vessel, and several smaller craft on Jan. 1, 1946.

Uruguay's illiteracy rate is 35 percent; primary education is compulsory and all education is free. There were in 1942, a total of 22,833 pupils enrolled in 1,768 primary schools, 27,000 in ninety-eight secondary schools, and 2,670 in the one university at Montevideo. Uruguay's high percentage of white population includes many foreign-born, mostly Italian and Spanish, but some Brazilian, Argentine and French.

Cattle, sheep, meat and wool dominate Uruguayan economy. With nearly 80 percent of its grassy land devoted to grazing, there were in 1942 a total of 22,000,000 sheep, and in 1937, a total of 8,296,890 cattle, 644,200 horses and 6,091,842 fowls. The 1942 wool output was 52,880 tons. With only about 5 percent of land cultivated, a third of this grows wheat, the chief crop—238,000 tons in 1943-44. Other crops are corn, flax for linseed, oats, potatoes, beans, fruits, tobacco, alfalfa and grapes. From its grapes, Uruguay makes 70,000,000 liters of wine a year.

Uruguay slaughters more than a million head of cattle and sheep a year, and meat processing is the largest manufacturing industry. There are many modern plants for chilling or freezing meat, and plants for preparation of liquid extract of beef. The last industrial census in 1936 showed a total of 11,470 industrial plants, with 90,128 workers, and capital of about 250,000,000 pesos.

During World War II Uruguay doubled its foreign trade and most of the increase went to the United States. In 1944 imports were \$72,446,471 against exports of \$97,558,653, adding millions more to Uruguay's favorable trade balance that was estimated at \$150,000,000 in 1946.

In value, wool is the export leader, about 40 percent of the total, followed by canned

meat, frozen beef and hides. Chief imports are oil, gasoline, sugar, iron and steel. In addition to the United States, Uruguay trades extensively with Britain, Brazil and Argentina. In 1946 Argentina sought to put political pressure on Uruguay by cutting off its wheat and salt.

Steamers of fourteen-foot draft can travel halfway up the country's Uruguay River border, and smaller craft can go nearly the length of that border. The Rio Negro is navigable only in its lower course. Railway mileage in 1945 totaled 1,800, of which 90 percent was British owned. Highway mileage was 8,514. Air service is supplied by Pan American and three other lines, one domestic. In 1942 Uruguay had 57,882 telephones, the second highest rate per capita in Latin America.

The 1944 budget put revenue at 136,894,503 pesos and expenses at 136,900,000 pesos, and deficit financing continued for the sixth straight year. The 1944 public debt was 571,602,285 pesos. The 1941 national income of 480,000,000 pesos gave Uruguay the fourth highest per capita income in Latin America. U. S. investments in 1942 were \$10,918,000; British, 44,085,608 pounds.

Uruguay, a low, rolling plain in the south and a low plateau in the north, has a 120-mile Atlantic shore line, a 235-mile-frontage on the Rio de La Plata, and 220 miles on the Uruguay River, its western boundary. The climate is good. Average summer temperature in January and February is 71 degrees, and average winter temperature in July is 50 degrees. Frost is almost unknown. Average rainfall is 35 inches, heaviest in the autumn.

Minerals are of slight importance. In the north some gold is mined—1,608 ozs. in 1939; and there are small deposits of silver, lead, copper, talc and lignite coal. The forest products, including quebracho, urunday and guayabo, do not even meet local needs.

Venezuela (Republic)

(Estados Unidos de Venezuela)

Area: 352,143 square miles.

Population (census 1941): 3,850,771.

Density per square mile: 10.9.

President: Rómulo Betancourt.

Principal cities (census 1941): Caracas, 269,030 (capital); Maracaibo, 112,519 (oil); Valencia, 53,938 (farming center); Barquisimeto, 54,176 (coffee, sugar, mining).

Monetary unit: Bolívar.

Racial stock (est. 1938): Mestizo, 65%; White, 20%; Negro, 8%; Indian, 7%.

Language: Spanish.

Religion: Roman Catholic.

Venezuela, a third larger than Texas, has a stormy political past and the dis-

tingtion of being the world's second or third greatest producer of oil, outranked only by the United States and possibly by Russia. In South America it is the sixth largest country in size, the only country lying entirely north of the equator, the second most illiterate country, and the birthplace of Simon Bolívar who led the liberation of much of the continent from Spain.

Columbus discovered Venezuela on his third voyage in 1498 and for reasons of his own, a subsequent Spanish explorer gave the country its name, meaning "Little Venice." There were no important settlements until Caracas was founded in 1567. With Bolívar taking part, Venezuela was one of the first South American colonies to revolt against Spain in 1810, but it was not until 1821 that independence was won. Federated at first with Colombia and Ecuador, the country set up a republic in 1830, and then collapsed for many decades into a condition of revolt, plot, dictatorship and corruption climaxed by the iron-hand regime of Antonio Guzmán Blanco from 1870 to 1889. The United States intervened in 1895 to force Great Britain to arbitrate a dispute with Venezuela over the boundary with British Guiana. From 1908 to 1935 when he died, General Juan Vicente Gómez ruled tyrannically over the nation, picking various satellites to alternate with him in the presidential palace. During World War I Gómez maintained neutrality and he was succeeded in 1936 by General Eleazar López Contreras. The president during World War II, General Isaias Medina Angarita, cooperated with the United States but he permitted such political freedom that he was overthrown on Oct. 19, 1945.

Out of that revolt, militarist in nature, the Socialist leader Dr. Rómulo Betancourt became provisional president, and his government received U. S. recognition on Oct. 21, 1945. By the summer of 1946, the Betancourt regime was forced to guard the presidential palace against another desperate promise of revolution.

In its government, under a 1936 constitution, Venezuela is a federal union of twenty states, a federal district and two territories. Normally the president is elected every five years by the Congress composed of a 40-member Senate and an 85-member Chamber of Deputies, both directly elected. All males twenty-one and over have the vote. The president names the territorial governors but each of the nominally autonomous states has its own courts and a president chosen by a locally elected assembly. Federal Supreme Court judges are elected by Congress. Military service is compulsory with a three-year initial training period. In 1940 the army had 11,000 men and 7,500 reserves; the air force, 373 men and fourteen planes. The navy in 1940 had five gunboats, two armed

ugs, and one yacht. Four coast guard patrol vessels were received from the United States in 1944. Under a pact signed on June 3, 1946, a U. S. military mission was to advise the armed forces on modern tactics and equipment for two years.

Illiteracy in 1943 was estimated at 70 percent, second in South America only to Bolivia. Primary education between seven and fourteen is compulsory. School enrollment in 1944 exceeded 300,000 in 5,318 primary and 122 secondary schools. There are two universities—Los Andes at Merida, with 700 students, and Central University at Caracas, with 2,800 students.

About 80 percent of the population is rural. Venezuela has one of South America's highest birth rates, and increased its population more than 10 percent from 1936 to 1941.

The principal crop is coffee, grown on 60,000 plantations on the slopes of the coastal mountains. Production for 1944-45 was 950,000 bags, each of sixty kilograms. Exports of cocoa in 1944 were 15,869 metric tons, and other important crops are sugar, tobacco, cotton, corn, wheat and tropical fruits. Stockraising, centered east of Lake Maracaibo, is important. Estimates in 1945 showed 4,000,000 cattle, 750,000 calves, 60,000 sheep and lambs, and 1,400,000 goats and kids. Cattle hide production in 1944 was 9,600 metric tons.

There are few industries, the most important being woodworking, cotton textiles and tobacco products. The most recent statistics, in 1936, listed 8,025 establishments with 46,855 workers, and a product value of \$51,945,858. Electric power is plentiful in Venezuela, and a new law in 1943 prepared the way for the beginning of an oil refining industry. Most Venezuelan oil always was shipped out of the country for refining.

Oil, most of which is found on the north-west shore of Lake Maracaibo, is everything in Venezuela. It accounts for 90 percent of exports, gives the country a big foreign trade balance and a treasury surplus. All exports in 1943 totaled 862,085,143 bolivars; imports, 222,059,810 bolivars. After oil, exports are gold, hides, livestock, coffee and cocoa. Chief imports are metals, metal products, machinery, food products, textiles and chemicals. Most Venezuelan oil goes to the United States, via Curaçao and Aruba, refining centers in the Dutch West Indies. About 35 percent of other exports are U. S. purchased. The United States supplies 85 percent of imports, with Britain second.

Highways include 3,750 miles for all weather use, and 1,600 miles of unimproved road. Railway mileage is about 685, in largely unconnected short lines, ten national and two British-owned. In 1945

Venezuela had thirty-eight airports serving Pan American, K.L.M., the government-owned Linea Aeropostal Venezolana, Aerovias Venezolanas, and the newly organized Linea Aerea TACA de Venezuela. Telephones in 1942 numbered 36,138. Vehicle registration in 1945 totaled 15,095 cars and 12,573 trucks. La Guaira and Puerto Cabello are the chief seaports. Navigable rivers total 6,500 miles. Most of the tonnage sent along the Orinoco—navigable for 700 miles for river steamers of twelve-foot draft—is trans-shipped at Port of Spain, Trinidad.

The proposed 1945-46 budget was 506,-311,173 bolivars. The treasury surplus in April, 1945, was 238,499,000 bolivars as against an internal debt of 25,000,000 bolivars. There is no foreign debt. Venezuela's excellent financial position is largely due to its revenue from taxes on oil and other minerals. British investments in 1944 were £18,325,447; American investments in 1942, \$262,376,000.

An unusual setting of mountain systems break Venezuela into four distinct areas. There is the Maracaibo lowland. There is the mountainous region in the north and northwest. There is the Orinoco basin with the llanos—vast grass covered plains—on its northern border and great forest areas in the south and southeast. And there is the Guiana highland, south of the Orinoco, accounting for nearly half of the national territory. About 80 percent of Venezuela is drained by the Orinoco and its 400 tributaries. All of the river's 1,500 miles lie in or on the Venezuelan border. The coast line, 1,876 miles long, is indented in the northwest by the Gulf of Maracaibo. A narrow channel joins the gulf to Lake Maracaibo which is nearly the size of Ontario.

The climate is tropical except where modified by altitude; it approaches the mild temperate in the higher western mountains. Most rainfall occurs between April and October, and the rest of the year is dry.

In addition to oil, Venezuela has gold mines in the region southwest of the Orinoco delta. Output in 1944 was 59,000 ounces. Of minor importance are bauxite, coal, copper, iron, tin, asbestos, and asphalt. Diamond production in 1944 was 59,000 carats.

Much of the country is covered by forests still barely exploited, particularly south of the Orinoco. Forest products include balata, cabinet woods, chicle, divi-divi (tannin), mangrove bark, medicinal plants, rubber, tonka beans and copaiba. One of the oldest industries is the pearl fisheries off Margarita, Coche and Cubagua islands, on the northern coast. Production in 1943 was 4,993,257 carats.

Yugoslavia (Republic)

Area (1945): 95,983 square miles.

Population (est. 1941): 16,261,125.

Density per square mile: 169.4.

Chairman of Praesidium of National Assembly:
Dr. Ivan Ribar.

Prime Minister: Marshal Josip Broz (Tito).

Principal cities (census 1931): Beograd (Belgrade), 241,542 (capital); Zagreb, 185,581 (Croat commercial center); Subotica, 100,058 (wheat; livestock); Sarajevo, 78,182 (Bosnian manufacturing center); Skopje, 64,807 (Serbian trading center).

Monetary unit: Dinar.

Racial stock (1931): Serbian, 46%; Croat, 28.5%; Slovene, 8.5%; German, 3.6%; Others (Magyar, Albanian, Rumanian, Czech), 14.3%.

Languages: See Racial stock.

Religions (1931): Serbian-Orthodox, 48.7%; Roman Catholic, 37.45%; Mohammedan, 11.2%; Protestant, 1.66%; Jewish, .49%; Greek Catholic, .32%; Others, .11%.

HISTORY. Yugoslavia, twice the size of Pennsylvania and fronting on the Adriatic Sea opposite Italy, was born in 1919, formed out of some of Europe's oldest trouble spots in the Balkans. After a brief and unstable history of twenty-five years, it emerged from World War II as a full-fledged Russian satellite—and still a trouble spot. The disposition of Trieste, claimed by Yugoslavia and Italy, was one of the big problems of the Paris Peace Conference in 1946. While the diplomats wrestled with that problem in Paris, Yugoslavia created an international incident by shooting down two unarmed American planes off course over her territory in August of 1946, and was stoutly defended by Russia for the act.

The 1919 components of Yugoslavia were the old kingdoms of Serbia and Montenegro, and the following: Bosnia-Herzegovina, formerly administered jointly by Austria and Hungary; Croatia-Slavonia, which had had limited autonomy under Hungary; and Slovenia and Dalmatia, formerly administered by Austria.

Alexander, son of King Peter I of Serbia, became the first king of the new country that grew out of World War I. He ascended the throne on Aug. 16, 1921, and his reign was a rocky one because the Croats, under Dr. Stephen Radic, unceasingly sought autonomy from the Serb king. Finally, a Croat assassinated Alexander in Marseille in October of 1934, and since his son Peter was a minor, a regency was set up under Prince Paul, the king's uncle.

After pursuing an increasingly pro-Axis policy under the regent, Yugoslavia signed the Axis Tri-Partite Pact on March 25, 1941, and thus caused the overthrow of the government two days later. On April 6 the country was invaded and occupied by the Nazis. While the king and government fled to London and government-in-exile,

Yugoslavia was divided into German, Italian, Hungarian and Bulgarian occupation zones. Puppet regimes were established in Croatia and Serbia.

Inside Yugoslavia, the Axis occupation was fought by two guerrilla armies—the Chetniks under Draja Mihajlovic, who supported the monarchy; and the Partisans under Marshal Tito (Josip Broz), who leaned toward Russia. These two groups fought not only the Germans, but also each other. In November of 1943, Tito established an Executive National Committee of Liberation to act as a provisional government, thus repudiating King Peter in exile.

In elections of Nov. 11, 1945, Tito's forces won overwhelmingly, partly because the monarchist factions boycotted the balloting. Convening on Nov. 29, the new Assembly abolished the monarchy and set up the Federal People's Republic of Yugoslavia. Tito was premier and his government won British and U. S. recognition on Dec. 22, 1945.

Meanwhile, pending settlement of the fate of Trieste and surrounding area in northwest Yugoslavia, allied troops maintained occupation there amid a strife-filled situation that often was tense.

GOVERNMENT. The constitution of Jan. 31, 1946, is derived from Moscow. There is a federal assembly with one representative for each 50,000 electors in the country. There is a house of nations in which the six federal units—Serbia, Croatia, Slavonia, Bosnia-Herzegovina, Macedonia and Montenegro—each have twenty-five representatives, while three other areas have a total of twenty-five. The praesidium, a joint committee of both houses, carries on when parliament is out of session. Actually, the master control is in the hands of Tito and the parliament is little more than a rubber stamp agency.

The present army, based upon the National Liberation Army and partisan detachments which at one time had a strength of about 800,000, is being reorganized and re-equipped along Soviet lines. Many of its higher officers are attending Red Army military schools. Its strength was unofficially estimated in July 1946, at 400,000 to 500,000 men. The navy was believed to include a destroyer, a submarine and two and a corvette on December 31, 1945.

SOCIAL AND ECONOMIC CONDITIONS. Education in 1940 on the elementary level was compulsory and free. In 1938 there were 8,727 elementary schools, with 1,393,422 pupils. In addition to many professional, industrial and agricultural schools, there were 119 high schools with 116,655 pupils and 22 training colleges for teachers with 3,199 pupils. The three universities

—Beograd, Zagreb, Ljubljana—had 16,207 students.

Agriculture occupies about 80 percent of the population and in 1939, 58.9 percent of the total area was under cultivation. The principal crops are corn, wheat, sugar beets, hemp and hops, opium (in Macedonia) and tobacco (chiefly in Macedonia and Herzegovina). Other important crops are beans, potatoes, flax, clover and lucerne. Excellent wines are produced in Dalmatia and Herzegovina and along the Danube in Serbia.

MAJOR AGRICULTURAL CROPS, 1939

Crop	Acres	Tons
Corn	6,622,070	4,459,465
Wheat	5,441,410	3,169,774
Barley	1,027,520	467,596
Oats	881,790	383,931
Rye	637,260	268,410
Vines	550,765	855,385

The fruit industry is important, especially in Serbia and Bosnia. In an average year some 750,000 tons of red plums are produced and 40,000 to 50,000 tons of dried plums are exported. In 1939 there were 8 sugar factories. In 1939 there were 12,224,595 cattle, 1,235,359 horses, 10,153,798 sheep and 3,503,454 swine.

Manufactures are limited for the most part to consumer goods. In 1938 there were 3,054 industrial establishments of which 884 were agricultural and food, 480 wood and paper, 399 textiles, 369 building and 234 electrical.

Yugoslavia has only limited access to ports on the Adriatic because of the difficulty in crossing the coastal range with railways and highways. Waterways, especially the Danube which is navigable for 318 miles in Yugoslavia, are important. In 1939, 3,335,500 tons of cargo were carried on inland waterways. There were in 1939 a total of 490 craft and many barges engaged in river transportation. The merchant marine in 1939 numbered 190 vessels of 411,384 gross tons. Wartime losses were about 202,000 tons. Railway mileage (1939) totaled 6,655 miles, mostly state owned. Highway mileage was 26,183, largely unimproved.

Exports in 1939 totaled \$125,419,000, of which 32 percent went to Germany, and imports were \$108,069,000, of which 48 percent came from Germany. Major exports were lumber, wood products, live animals, copper ore, wheat, meat, hemp, eggs, corn, tobacco and fruit. Major imports were textiles, iron and steel products, coal, vehicles and machinery.

Revenue in 1939 was \$281,428,524; expenditures, \$268,366,824. The national debt was \$559,257,920, and the gold reserve was \$45,386,568.

NATURAL FEATURES AND RESOURCES.

About half of Yugoslavia is mountainous. In the north, the Dinaric Alps rise abruptly from the sea and progress eastward as a barren limestone plateau called the Karst. Montenegro is a jumbled mass of mountains, containing also some grassy slopes and fertile river valleys. Southern Serbia, too, is mountainous. In the north and northeast, a rich plain drained by the Danube is the most fertile area of the country.

The Danube and tributaries—the Drava, Sava and Morava—in the northeast are the principal rivers. On the Adriatic, Yugoslavia's climate is mild Mediterranean, but in the interior the winters are cold and the summers hot.

Yugoslavia is the Balkans' principal mineral producer. Production in 1939 was: copper ore, in copper content, 70,768 tons; chromite, 65,617; bauxite ore, 351,457; lead ore, 76,059; iron ore, 735,031; zinc, 4,519; coal, 489,421; and lignite, 6,197,131. Also, silver, 2,293,634 ounces; gold, 33,662 ounces; and antimony, 7,356,750 pounds. Several of the larger mines are foreign-owned. Many rushing mountain streams make a high hydroelectric potential, and this has been developed frequently in connection with mining.

Forests cover about 30 percent of the country, with beech, fir and oak the most common trees. The annual cut, important for export, is about 530,000,000 cubic feet. Teslic has Europe's largest wood-distilling plant, making acetone, alcohol, methylated spirits and formaldehyde. Fishing is of some importance, especially among the coastal islands.

Important changes in various countries may have occurred too late to be included in the foregoing section. Some events that have occurred may be found in the 1946 Chronology.

LEADING COUNTRIES OF THE WORLD IN VARIOUS RICHES AND NATURAL RESOURCES

Largest Islands of the World

Island and status	Location	Area, sq. mi.
GREENLAND (Danish colony, under United States protection)	North Atlantic	839,782
NEW GUINEA (Dutch colony, west part; British mandate, northeast part; Australian territory, southeast part)	Southwest Pacific	312,328
BORNEO (Dutch colony, south part; British protection, north part)	South China Sea	290,285
BAFFIN (Canada, Northwest Territory)	Arctic Ocean	236,000
MADAGASCAR (French colony)	Off east coast of Africa	229,438
SUMATRA (Dutch colony)	Indian Ocean	163,141
HONSHU (Japanese home island)	Sea of Japan	91,278
GREAT BRITAIN (England, Scotland, and Wales)	Off coast of northwest Europe	88,753
ELLESMERE (Canada, Northwest Territory)	Arctic Ocean	76,600
VICTORIA (Canada, Northwest Territory)	Arctic Ocean	74,000
CELEBES (Dutch colony)	Southwest Pacific	69,253
SOUTH ISLAND, NEW ZEALAND (British dominion)	South Pacific	58,120
JAVA (Dutch colony)	Indian Ocean	48,504
CUBA (Republic)	Caribbean Sea	44,164
NORTH ISLAND, NEW ZEALAND (British dominion)	South Pacific	44,131
NEWFOUNDLAND (British colony)	North Atlantic	42,734
LUZON	Philippine Islands	40,814
ICELAND (Republic)	North Atlantic	39,688
MINDANAO	Philippine Islands	36,900
HOKKAIDO (Japanese home island)	Sea of Japan	34,084
IRELAND (Eire, republic, south part; Northern Ireland, part of United Kingdom)	West of Great Britain	31,833
HISPANIOLA (Dominican Republic, east part; Haitian Republic, west part)	Caribbean Sea	28,242
TASMANIA (Australian state)	South of Australia	26,213
BANKS (Canada, Northwest Territory)	Arctic Ocean	25,992
CEYLON (British colony)	Indian Ocean	25,332
SAKHALIN (U. S. S. R.)	North of Japan	24,560

Island and status	Location	Area, sq. mi.
DEVON (Canada, Northwest Territory)	Arctic Ocean	20,484
TIERRA DEL FUEGO (Argentina, east part; Chile, west part)	Southern tip of South America	18,530
MELVILLE (Canada, Northwest Territory)	Arctic Ocean	16,164
SOUTHAMPTON (Canada, Northwest Territory)	Hudson Bay	16,114
KYUSHU (Japanese home island)	Sea of Japan	14,719
NEW BRITAIN (British mandate)	Southwest Pacific	14,500
PRINCE OF WALES (Canada, Northwest Territory)	Arctic Ocean	14,004
NOVAYA ZEMLYA (U. S. S. R.) (South Island)	Arctic Ocean	14,000
FORMOSA (Taiwan) (Chinese sovereignty)	East China Sea	13,857
TIMOR (Dutch colony, west part; Portuguese colony, east part)	Southwest Pacific	13,700
HAINAN (Chinese possession)	South China Sea	13,500
VANCOUVER (Canada)	Off coast of western Canada	12,408
SICILY (Italian department)	Mediterranean Sea	9,924
SOMERSET (Canada, Northwest Territory)	Arctic Ocean	9,540
SARDINIA (Sardegna) (Italian department)	Mediterranean Sea	9,298
FLORES (Dutch colony)	Southwest Pacific	8,870
SHIKOKU (Japanese home island)	Sea of Japan	7,246
CERAM (Serang) (Dutch colony)	Southwest Pacific	6,621
HALMAHERA (Jilolo) (Dutch colony)	Southwest Pacific	6,500
NEW CALEDONIA (French colony)	South Pacific	6,221
NORTH-EAST LAND (Spitzbergen) (Norwegian colony)	Arctic Ocean	6,000
SAMAR	Philippine Islands	5,124
NEGROS	Philippine Islands	4,903
JAMAICA (British colony)	Caribbean Sea	4,722
PALAWAN	Philippine Islands	4,500
PANAY	Philippine Islands	4,448
HAWAII (United States territory)	North Pacific	4,021
VITI LEVU (British colony in Fiji Islands)	South Pacific	4,011

Oceans and Seas

Name	Area, square miles	Average depth, feet	Greatest depth, feet	Place of greatest depth
Pacific Ocean	63,985,000	14,050	35,400	Off Mindanao, Philippines
Atlantic Ocean	31,529,000	12,880	30,246	Off Puerto Rico
Indian Ocean	28,357,000	13,000	22,968	Off Sumatra and Java
Antarctic Ocean	5,731,400	14,274	69° 20' S., 99° 45' W.
Arctic Ocean	5,541,000	3,955	17,850	77° 45' N., 175° W.
Mediterranean Sea (including Black Sea)	1,145,000	4,692	14,435	Off Cape Matapan, Greece
Bering Sea	878,000	4,716	13,422	Off Buldir Islands
Caribbean Sea	750,000	7,270	23,748	Off Cayman Islands
Gulf of Mexico	716,000	12,000	Sigsbee Deep
Okhotsk Sea	582,000	2,748	11,154	Off Kurile Islands
East China Sea	480,000	618	10,000
Hudson Bay	472,000	420	600	Near entrance
Japan Sea	405,000	4,428	10,000	Central Basin
Andaman Sea	307,900	2,856
North Sea	221,000	312	2,165	Skagerrak
Red Sea	178,000	1,614	7,254	Off Port Sudan
Black Sea	164,000	3,900	6,760	Near center
Baltic Sea	158,000	180	1,380	Off Gottland

The Great Barrier Reef lying off the northeast coast of Australia is the largest continuous mass of coral in the world. It extends 1,260 miles and is still growing.

The North Pole is not the coldest place in the Arctic Circle. For more than a

quarter of a century Europeans have lived in the coldest Arctic regions, which are the Yukon basin in Alaska, the Yukon Territory in Canada and the Siberian province of Yakutsk. Temperatures of 90° F. below zero have been recorded in Yakutsk.—*Encyc. Brit.*

PRINCIPAL RIVERS OF THE WORLD

River	Source	Course	Mouth	Approx. miles	Navigable length
Nile.....	Lake Victoria.....	North through Sudan and Egypt.....	Mediterranean Sea.....	4,000	2,900 miles at high water
Mississippi-Missouri.....	Source of Red Rock Creek, Montana.....	(See Mississippi and Missouri Rivers)	Gulf of Mexico.....	3,988	2,707 miles to Ft. Benton, Mont.
Amazon.....	Glacier-fed lakes in Peru.....	Through eastern Peru and east across Brazil.....	Atlantic Ocean.....	3,900	Iquitos, 2,300 miles, for ocean steamers, Actual Point, 2,700 miles, for vessels of 14-ft. draft
Yangtze.....	Tibetan plateau.....	East through central China.....	East China Sea.....	3,400	Vessels to 6,000 tons to Hankow at high water
Ob.....	Altai Mountains, U. S. S. R.....	Northwest in western Siberia.....	Arctic Ocean.....	3,200	Above confluence of Irtysh River
Amur.....	Confluence of Shilka (U. S. S. R.) and Argun (Manchuria) Rivers.....	Almost entire length of boundary between U. S. S. R. and Manchuria.....	Gulf of Tartar.....	2,900	Sretensk, over 2,000 miles, for small craft
Congo.....	Between Lakes Nyasa and Tanganyika.....	Through Northern Rhodesia, Belgian Congo, boundary between French Equatorial Africa and Belgian Congo in lower part.....	Atlantic Ocean.....	2,900	For large vessels 85 miles to Matadi
Lena.....	Baikal Mountains, U. S. S. R.....	East and north through eastern Siberia.....	Arctic Ocean.....	2,900	To Vitim
Yenisei.....	Tannu Ola Mountains, western Mongolia.....	North through Siberia.....	Arctic Ocean.....	2,800	Not used very much
Parana.....	Confluence of Paranaiba and Grande Rivers in southeast Brazil.....	Paraguay and Argentina.....	Rio de la Plata (Atlantic Ocean).....	2,800	For ocean vessels to Santa Fe, about 290 miles
Huang-Ho.....	East part of Kun-Lun Mountains in western China.....	Winding, generally east.....	Gulf of Pohai.....	2,700	Used locally
Mekong.....	Tibetan highlands.....	Through western China (Yunnan Province) and French Indo-China.....	China Sea.....	2,600	Used locally
Niger.....	Border of Sierra Leone.....	Through French West Africa and Nigeria.....	Gulf of Guinea.....	2,600	1,525 miles in 3 sections for native craft
Mackenzie.....	Head of Finlay River, British Columbia.....	East, then north through Great Slave Lake.....	Beaufort Sea (Arctic Ocean).....	2,500	1,200 miles to Ft. Smith on Slave River
Missouri.....	Actual headwaters Red Rock Creek. Beginning of Missouri at confluence of Gallatin, Madison and Jefferson Rivers.....	Through Montana, Dakotas, between Nebraska and Iowa, northeast corner of Missouri and across Missouri.....	Mississippi River.....	2,723 (headwaters) 2,475 (confluence)	1,442 miles to Ft. Benton, Montana
Mississippi.....	Lake Itasca, Minnesota.....	Through Minnesota; then forms east boundary of Iowa, Missouri, Arkansas, and part of Louisiana; and west boundary of part of Wisconsin, Illinois, Kentucky, Tennessee, and Mississippi East and south through European Russia.....	Gulf of Mexico.....	2,470	9-ft. channel to Minneapolis
Volga.....	Valdai plateau, U. S. S. R.....	West through central Alaska.....	Caspian Sea.....	2,300	Non-continuous navigation
Yukon.....	Head of Nisutlin in northwest British Columbia.....	West through central Alaska.....	Bering Sea.....	1,924	Nearly entire length
St. Lawrence.....	St. Louis River, Minnesota.....	Through Lakes Superior, Huron, Erie and Ontario; boundary between Ontario, Canada and New York State, and then through Province of Quebec.....	Gulf of St. Lawrence.....	1,900	Montreal for large ocean vessels, Kingston for vessels of 14-foot draft, head of Lake Superior for smaller vessels
Indus.....	Himalayas.....	Northwestern India.....	Arabian Sea.....	1,900	Used locally in plains areas

Si-Kiang.....	Plateau of Yunnan, southwest China..	East and southeast across South China..	China Sea.....	1,860	About 500 miles
Brahmaputra...	Himalayas.....	Through Tibet, Assam and Bengal.....	Ganges River (Bay of Bengal)	1,800	To Dibrugarh, 600 miles
Rio Grande.....	San Juan Mountains, Colorado.....	Through New Mexico, boundary between Texas and Mexico	Gulf of Mexico.....	1,800	Not used for navigation
Sao Francisco..	Southwest part of Minas Geraes in Brazil	North-northeast across plateau of Brazil.....	Atlantic Ocean.....	1,800	To Piranhas, 148 miles
Salween.....	Tibet south of Kun-Lun Mountains....	Extreme southwest China and south through Burma	Gulf of Martaban.....	1,750	Native craft only
Danube.....	Black Forest, Germany.....	Through Austria, Hungary, Yugoslavia, Bulgaria and Rumania	Black Sea.....	1,750	Special river craft to Ulm in Germany
Euphrates.....	Dumlu Dag (mountains), Turkey....	Syria and Iraq.....	Persian Gulf by way of Shatt-el-'Arab	1,700	Only locally
Murray.....	Australian Alps, New South Wales, Australia	West as boundary between New South Wales and Victoria, and then through Province of South Australia	Indian Ocean.....	1,700	Used locally
Tocantins.....	Near Pyrenopolis in southeast Brazil..	North to Para River.....	Para River (Atlantic Ocean)	1,700	Used locally
Colorado.....	Middle park, northern Colorado.....	Through Colorado, Utah, Arizona and Mexico....	Gulf of California.....	1,650	Not used for navigation
Nelson.....	Head of Bow River, western Alberta, Canada	East and north through Alberta, Saskatchewan and Manitoba	Hudson Bay.....	1,600	80 miles
Orinoco.....	Sierra Parima on Venezuela-Brazil boundary	Through Venezuela.....	Atlantic Ocean.....	1,600	600 miles to Cariben Rapids for large vessels
Zambezi.....	11°21'S., 24°22'E., Northern Rhodesia, Africa	Angola, Northern Rhodesia, boundary between it and Southern Rhodesia, and Mozambique	Indian Ocean.....	1,600	Noncontinuous navigation for small craft
Amu Darya.....	Nicholas Range in Pamir Mountains, U. S. S. R.	680 miles boundary between U. S. S. R. and Afghanistan, northwest to Aral Sea	Aral Sea.....	1,500	Ships of 3-ft. draft to Pata Kesar
Paraguay.....	Mato Grosso in southern Brazil.....	Paraguay and Argentina.....	Parana River.....	1,500	Used locally
Himalayas.....	Ganges.....	Northern India.....	Bay of Bengal.....	1,500	For commercial use to Calcutta
Arkansas.....	Central Colorado.....	Through Colorado, Kansas, eastern Oklahoma and Arkansas	Mississippi River.....	1,450	Little used owing to numerous sand bars and fluctuating water level
Dnieper.....	Valdai Hills, U. S. S. R.....	Through western European Russia.....	Black Sea.....	1,400	To Dorogobuzh
Rio Negro.....	Watershed between Orinoco and Amazon basins	Southeast to Amazon River at Manaos.....	Amazon River.....	1,400	450 miles for shallow-draft vessels
Ural.....	Southern Ural Mountains.....	Winding, generally southwest.....	Caspian Sea.....	1,400	Too shallow
Orange.....	Basutoland in southern Africa.....	West across southern Africa.....	Atlantic Ocean.....	1,300	30-40 miles for small vessels above bar at mouth of river
Irrawaddy.....	Confluence of N'mai and Mali Rivers in northeast Burma	Through Burma from north to south.....	Bay of Bengal.....	1,250	Locally
Madeira.....	Confluence of Gaupore and Maumore Rivers on Bolivia-Brazil boundary	Northeast to Amazon River below Manaos.....	Amazon River.....	1,200	In high water steamers go 663 miles to Fall of St. Antonio. Water 5-6 ft. deep at other times
Don.....	Lake Ivan, U. S. S. R.....	Through eastern European Russia.....	Sea of Azov.....	1,200	To Voronezh
Darling.....	Central part of Eastern Highlands, Australia	Southwest across Province of New South Wales..	Murray River.....	1,160	Regular navigation hindered by great fluctuations in flow of river

Principal Rivers of the World—(cont.)

River	Source	Course	Mouth	Approx. miles	Navigable length
Columbia	Columbia Lake, British Columbia	Through British Columbia, Washington and Oregon	Pacific Ocean	1,150	323 miles to mouth of Snake River
Tigris	Taurus Mountains, Turkey	Southeast through Iraq	Persian Gulf by way of Shatt-el-Arab	1,150	Native rafts downstream
Araguaya	Plateau of Mato Grosso in southern Brazil	Northeast to Tocantins River	Tocantins River	1,100	Small sections for river steamers
Sungari	Mountains on border of Manchuria and Korea	Northwest then east through Manchuria	Amur River	1,070	To Kirin
Red	Confluence of Prairie Dog Town Creek and North Fork of Red River in Oklahoma	Southeast between Texas and Oklahoma, southwest Arkansas, and southeast across Louisiana	Mississippi River	1,018	Small boats to Fulton, Arkansas, 508 miles
Churchill	La Loche Lake, Canada	East-northeast across Manitoba	Hudson Bay	1,000	For canoes
Ohio	Confluence of Allegheny and Monongahela Rivers	Boundary between Ohio, Indiana and Illinois on the north, and West Virginia and Kentucky on the south	Mississippi	981	Entire length

LAND AREAS OF THE WORLD

Area	Estimated population, in thousands	Approximate area, in thousands of sq. miles	Percent of total land area	Dimensions, miles East-West	North-South	Mean	Highest	Elevation, feet	Lowest
WORLD	2,164,280	56,611	100	24,902	24,860	2,750	Mt. Everest, Asia, 29,002	Dead Sea, Asia, 1,286 below sea level	
Asia, including Asiatic Russia and Netherlands East Indies	1,189,257	16,795	30	5,400	5,300	3,000	Mt. Everest, Tibet-Nepal, 29,002	Dead Sea, Palestine—Trans-Jordan, 1,286 below sea level	
Africa	161,434	11,626	20	4,600	5,000	1,900	Mt. Kilimanjaro, Tanganyika, 19,319	Qattara Depression, Libyan Desert, Egypt, 440 below sea level	
North America	183,000	9,000	16	3,200	4,000	2,000	Mt. McKinley, Alaska, 20,300	Death Valley, California, 275 below sea level	
South America	91,400	7,045	12	3,200	4,600	1,800	Mt. Aconcagua, Chile, 23,080	Sea level	
Antarctica	Uninhabited	5,000	9	6,000	Mt. Thorvald Nilson, 15,400	Sea level	
Europe, including Iceland and European Russia	528,578	3,842	7	3,300	2,400	980	Mt. Elbrus, U. S. R., 18,564	Caspian Sea, U. S. R., 86 below sea level	
Australia	6,930	2,975	5	2,400	1,900	1,000	Mt. Kosciusko, 7,316	Lake Eyre, 39 below sea level	
Oceania, including New Zealand, Hawaii, Guam, New Guinea, Caroline, Marshall and Mariana Islands	3,681	328	1	Mauna Loa, Hawaii, 13,675	Sea level	

WORLD ELEVATIONS

PRINCIPAL DESERTS OF THE WORLD

Desert	Location	Approximate size	Approximate elevation, ft.	Features
Atacama	North Chile	400 miles long	7,000-13,500	Rugged. Rich in minerals, particularly nitrates.
Black Rock	Northwest Nevada	70 mi. long and in places 20 mi. wide, or about 1,000 sq. mi.	2,000-5,000	Usually dry, with a white alkali crust. Serves as the "sink" of the Quinn River and at times covered with water a few inches deep.
Colorado	Southeast California from San Geronimo Pass to Gulf of California	200 mi. long and a maximum width of 50 miles	Few feet above to about 250 ft. below sea level	Average 90° F. Has reached 125° F. in the shade. Contains Salton Sea. (overflow of Colorado).
Dasht-i-Kavir	Southeast of Caspian Sea in Iran	1,000	1,000	A salt depression. Vast deposits of solid rock salt.
Dasht-i-Lut	Northeast of Kerman in Iran	800 by 400 mi., or at least 300,000 sq. mi.	3,000-5,000	Sandy soils with much alkali. Some well-watered areas. Several caravan routes. Fossil remains.
Gobi (Shamo or "Desert of Sand")	Most of Arabia	1,500 mi. long	1,850	Series of arid plateaus with scattered oases.
Great Arabian	North of 30° N. Latitude	400 mi. long and about 200 mi. wide	3,000	Stony with numerous wadis (dry stream beds).
Syrian (El Hamed)	South of Jaufr	400 by 30 mi.	600-1,000	Almost waterless but rich in pasture in the rainy season (winter and spring). Large sand dunes.
Nefud (Red Desert)	Southeast of Nefud	About one-half the continent	4,500	Waterless but rich in pasture in winter and spring.
Dahna	South portion of Nejd	80 by 50 mi.	Over 3,000	Areas of "fixed dunes" and stony ("gibbers") wastes.
Rub' al Khali	Western portion of Australia	400 by 600 mi., or about 120,000 sq. mi.		Salt desert with numerous salt flats. Some used by automobiles in setting world speed records.
Great Australian	Gibson; Great Victoria; Arunta	110,000 sq. mi.		Mild climate. Red Sand. Some vegetation and game.
Great Sandy	West of Great Salt Lake to Nevada-Utah line	370 by 220 mi. or 70,000 sq. mi.		Flat sandy wastes interspersed with broad expanses of clay soil. Water found only in wells.
Kalahari	South Africa between the Orange and Zambezi Rivers	15,000 sq. mi.		Arid grazing land. Numerous sand dunes moving southeast.
Kara-Kum (Desert of Khiva or "Black Sands")	Southwest Turkistan south of Aral Sea	75 mi. wide	High plateau 5,000 ft. to 440 ft. below sea level to 11,000 above with an average elevation of 1,400 to 1,600 ft.	Temperature range 70°-125° F. during summer months. Hot dry alkali flats interspersed with salt-pans or lakes. Scanty vegetation.
Kizil-Kum	Central Turkistan southeast of Aral Sea	3,200 mi., greatest length along 20° N. Lat.; width varies from 800 to 1,400 mi. Area over 3,500,000 sq. mi.		Mild climate. Named from its bright colorful rocks. Varied surface. East Libyan desert is sand; central part contains rocky hills and mountains; west consists of low stony plains and dunes. Crossed by chain of oases. Well-marked caravan routes.
Mohave	North of Colorado Desert and south of Death Valley in southeast California	500,000 sq. mi.	2,500	Series of deep depressions, some below sea level. Famous caravan routes to oases such as Kharga, Dakhla, Farafra, Bahariya, Siwa, and Farafra.
Painted Desert, Sahara	Northeast Arizona	700 mi. long		Sand and rock desert with some small fertile oases.
Libyan	East portion of the Sahara west of Nile			Extremes of climate—22° to 86° F. in April. Uninhabited. Can be safely crossed only in winter. Marco Polo left a vivid description of this desert.
Nubian	From Red Sea to great west bend of the Nile			Sandy with strips of cultivable land.
Takla Makan	East Turkistan in Tarim Basin			
Thar (Indian)	Northwest India chiefly in Rajputana	Between Rann of Cutch and the Sutlej, or about 300 mi. by 380 mi.	About 500	

Volcanoes of the Earth

GENERAL DATA

430 volcanoes with recorded eruptions in historical times.

2,500 recorded eruptions, more than 2,000 of which took place in the Pacific area.

Of known active volcanoes:

- 80—submarine type
- 275—in Northern Hemisphere
- 155—in Southern Hemisphere
- 366—reported in Pacific area

I ATLANTIC-INDIAN AREA

A. Mediterranean region

1. Italy: Mt. Vesuvius, southeast of Naples. Over 4,000 ft. high. Only active volcano on continent of Europe. Pompeii buried by an eruption in A.D. 79. Latest eruption in 1944.

2. Sicily: Mt. Etna, eastern Sicily. Over 10,000 ft. high. Over 80 recorded eruptions. Lava flow in 1928 blocked railroad between Messina and Catania.

3. Lipari Islands (north of Sicily).
a. Stromboli, about 3,000 ft. high. Called "Lighthouse of the Mediterranean".
b. Volcano, about 1,000 ft. high.

4. Grecian Archipelago: Santorin, on an island by same name in Cyclades. Severe eruption in 1866.

B. Atlantic area

1. Canary Islands: Teneriffe. Over 12,000 ft. high (Pico de Teide). Geologically one of the most instructive volcanic cones.

2. Cape Verde Islands: Fogo. Over 8,000 ft. high. Severe eruption in 1847.

3. Iceland: At least 25 active volcanoes. Has exceeded all other volcanic areas in output of lava. Since A.D. 1500 estimates place one-third of world's lava output in Iceland.

a. Hekla. About 5,000 ft. high. Several craters, largest about $1\frac{1}{4}$ miles in circumference. Nearly 20 eruptions since A. D. 1100. Most recent eruption in 1878.

b. Skaptarjökull. Near Skaptar. Laki, one crater, 2,800 ft. high; erupted in 1783. A single basalt flow was 50 miles long, 12-15 miles wide, and 800 ft. deep in some places.

c. Askja. Largest volcano in Iceland. Altitude 4,600 ft. Crater with area of 16 square miles contains a lake of hot water 5 miles in circumference.

4. Jan Mayen: Beerenberg, northern part of island. Extinct volcano over 8,000 ft. high.

5. West Africa: Mt. Cameroon. Altitude of 13,349 ft. Has several craters. Last erupted in 1922. Its western side is one of the rainiest regions in the world (400-430 in. annually).

6. Lesser Antilles (West Indian Islands):

a. Mt. Pelée. In northwestern Martinique.

Altitude about 4,400 ft. Eruption in 1902 destroyed town of St. Pierre and killed 30,000 in a few minutes.

b. La Soufrière. On St. Vincent Island. Altitude about 3,500 ft. An eruption in 1902 destroyed much property and caused numerous deaths.

C. Indian Ocean

1. Comoro Islands, east of northern Mozambique. One volcano, Kartala, altitude over 8,500 ft. Visible for over 100 miles. Last erupted in 1904.

2. Réunion Island, east of Madagascar. Piton de la Fournaise, over 3,500 ft. Eruptions in the form of large lava flows.

3. East Africa.

a. Kilimanjaro, in rift valley in Tanganyika. Extinct. Highest mountain in Africa (19,319 ft.).

b. Dubbi, in Eritrea. Altitude about 4,500 ft.

c. Afderá, in Eritrea. Altitude over 6,600 ft.

d. Kirunga-Cha-Gungo (Mt. Götzen), near Lake Kivu. Altitude 11,300 ft. and crater 1 mile wide, partly active.

e. Kirunga-Ndogo, near Lake Kivu. Altitude 11,000 ft.

II THE PACIFIC AREA

A. Northwest portion

1. Kamchatka: 14-18 active volcanoes.

a. Shiveluch. Altitude over 10,500 ft. Most northerly volcano of Kamchatka group.

b. Kluchevskaya (Kluchev). Altitude 15,745 ft. Highest peak in Siberia and highest active volcano in old world, snow-capped. Called the "Etna of Kamchatka." Last eruption in 1932.

c. Koryatskaya. Altitude over 11,500 ft. Violent eruption in 1895.

d. Avachinskaya. Altitude about 8,200 ft. Crater several hundred yards in circumference. Violent eruptions in 1827, 1837, and 1855.

2. Kurile Islands. Name derived from the Russian "Kurit" (to smoke), alluding to the active volcanic character of the groups. There are at least 13 active volcanoes and several submarine outbreaks.

3. Japan (at least 33 active vents).

a. Fujiyama, southwest of Tokyo. Altitude 12,395 ft. Symmetrical in outline. Snow-covered. Regarded as a sacred mountain and numerous pilgrims make the ascent in midsummer.

b. Adzuma-yama. Altitude 7,733 ft. Last eruption in 1900 when 82 sulfur diggers were killed or injured.

c. Shirane. Altitude 10,330 ft. Eruption in 1905 enlarged main crater to a length of 3,000 ft.

d. Asamayama. Altitude about 8,200 ft. Continuously active, violent eruption in 1783.

e. Aso-san. Altitude about 5,600 ft. Crater 10 by 15 miles is the largest in the world.

f. Bandaisan. About 120 miles north of Tokyo. Violent eruption in 1888 removed an estimated 2,982 tons of material and devastated a 27-square-mile area. Altitude 3,037 ft.

4. Ryukyu Archipelago.

d. Nakano-shima. Altitude 3,485 ft.

e. Suwanose-shima. Altitude 2,697 ft.

5. Bonin Islands (Ogasawara Islands): Mt. Suribachi on Iwo Jima. Altitude 546 ft. A sulfurous steaming volcano. Raising of U. S. flag over Mt. Suribachi was one of the dramatic episodes of World War II.

6. New Britain Archipelago (numerous active vents): Father, on New Britain. Altitude 7,500 ft.

7. Santa Cruz Islands. Tinakula, on Vanicoro Island. Altitude 2,200 ft.

8. New Hebrides: Lopevi. Altitude 4,714 ft. An isolated cone.

9. Samoan Archipelago: Savail, an eruption in 1905 did considerable damage. Niuafou (Tin Can) between Samoa and Fiji Islands has a crater 6,000 feet below and 600 feet above water. Active in 1943.

10. Philippine Islands (98 eruptive centers).

a. Taal. Elevation about 1,000 ft. On Volcano Island in Lake Bombon. Crater over 7,500 ft. in diameter. Last eruption in 1911.

b. Mayon (Albay). Altitude about 8,000 ft. In southeastern Luzon. An almost perfect cone. Highest peak. Continuous mild activity. In 1897 there was a destructive eruption.

11. Moluccas: A volcanic chain of islands which contains several active volcanoes.

12. Hawaiian Group.

a. Mauna Loa. Altitude over 13,000 ft. Also called "Long Mountain." Discharges more lava than any other volcano. Largest volcanic mountain in the world in cubic content. Its crater, Mokuaweweo, is 3.7 square miles in area. A flow in 1935-36 was bombed to divert it from destroying a settlement.

b. Mauna Kea, altitude 13,784 ft. Highest mountain in group. Highest mountain in the world, since the base is 18,000 ft. below sea level, making a total height of nearly 32,000 ft. Called "Snow Mountain" because it is snow-capped.

c. Hualalai. Altitude 8,269 ft. Has many small pit craters. Only lava flow in historic times was in 1801.

d. Kilauea, altitude 4,090 ft. A vent in side of Mauna Loa but apparently independent of it. One of the most spectacular and active craters. Crater has an area

of 4.14 square miles. Activity usually confined to crater pit but has had some eruptions (1790 and 1924). A volcanic observatory is located on Kilauea.

B. Southwest portion

1. Sumatra—90 volcanoes have been discovered, 12 are now active. They extend southwards from Sinobong (12,140 ft.) in the northwest to Krakatoa in Sunda Strait. Volcanoes include Sinabung (8,101 ft.), Sibayak (7,075 ft.), Pusuk Bukit (6,562 ft.), Berapi (5,875 ft.), Pasaman (9,844 ft.), Talang (8,399 ft.), Merapi (9,484 ft.), Singalang-Tandikat (9,479 ft.), Korinchi or Indrapura Peak (12,484 ft.), Kaba (6,528 ft.), Dempo (10,326 ft.), and Krakatoa. The last named is a small volcanic island in the Sunda Strait. Numerous volcanic discharges occurred in 1883. One explosion caused the disappearance of the highest peak and the northern part of the island. Fine dust was carried around the world in the upper atmosphere. Over 36,000 persons lost their lives. Tidal waves felt on California coast. Active again in 1928.

2. Java—13 of 125 volcanic centers are active. Few serious eruptions.

a. Papandayan. Altitude over 8,600 ft. Has numerous steam jets. Destroyed about 3,000 persons in 1772. Capped by sulfur deposits.

b. Bromo. Altitude 7,800 ft. Steam constantly rises from its huge crater. Boiling wells and mud cauldrons present. Erupted in 1928.

c. Galunggung, famous for two destructive eruptions in 1822. It is thought that over 100 villages and about 4,000 lives were lost.

3. Lesser Sunda Islands—15 eruptive cones.

a. Batoer (Batur) on Bali. Only active volcano on island. Altitude over 7,000 ft. Lava flows occurred in 1926.

b. Agung, on Bali. Altitude about 10,500 ft. Rises from a crater lake of that name. Now extinct.

c. Rindjani, on Lombok, about 12,000 ft. in elevation.

d. Temboro on Soembawa (Sumbawa), altitude about 9,000 ft. but was 13,000 ft. prior to a severe eruption in 1815 which ejected an estimated 36 cubic miles of material.

e. Other Sunda Islands: Flores Island has 100-200 eruptive points. Other Lesser Sunda Islands also have eruptive points but none of significance.

4. Melanesian area: Volcanoes are present on New Guinea, New Hebrides, Santa Cruz, Solomons, New Britain, and on numerous other small islands.

5. New Zealand.

a. Tarawera on North Island. Severe eruption in 1886 destroyed the famous "pink" and "white" sinter terraces of Rotomahana, a hot lake in North Island.

b. Ngauruhoe. Altitude 7,515 ft. Emits steam and vapor incessantly. Erupted in 1926; only active volcano in New Zealand.

C. Northeast border

1. Aleutian area—32 active vents known; numerous inactive cones.

a. Shisaldin on Unimak. Altitude 8,683 ft.

b. Makushin, on Unalaska. Altitude 5,691 ft.

c. Bogoslof, on Bogoslof Island. Altitude about 1,000 ft. Mountain first appeared after an eruption in 1796. New Bogoslof Island appeared in 1883. Two more islands appeared in 1906 and 1907. These blew up in 1909 and were replaced by two others.

2. Alaska.

a. Mt. Wrangell. Altitude 14,005 ft. Named for Baron Wrangell, a former Russian governor of Alaska.

b. Mt. Katmai. About 7,500 ft. high. Prior to 1912 had been inactive. On June 6, 1912, a violent eruption occurred. The "Valley of Ten Thousand Smokes" appeared after the eruption. Mildly active since then.

3. United States: Mt. Lassen. Altitude 10,453 ft. Only active volcano in the United States, 1915 the last period of activity. Other mountains of volcanic origin are Mt. Shasta, Mt. Hood, and Mt. Rainier.

4. Mexico.

a. Popocatepetl. Altitude 17,888 ft. Crater 500 ft. deep and $2\frac{1}{2}$ miles in circumference. Not entirely extinct.

b. Ceboruco. Altitude 7,100 ft. Active in 1875.

c. Colima Group. Fuego. Altitude 14,228 ft. Has had frequent eruptions; latest in 1909.

d. Jorullo. Altitude 4,262 ft. First eruption took place in 1769.

e. Orizaba. Altitude 18,209 ft. Probably the most perfect and beautiful of all volcanoes. Comparable to Mt. Fuji in Japan.

f. Tuxtla. Altitude 4,900 ft. Had a violent eruption in 1793 but is now quiescent.

g. Soconusco. Altitude 7,872 ft. Smokes occasionally.

h. Tacaná. Altitude 13,335 ft. Still active.

i. Parícutin. A new volcano. First appeared in February 1943 in a field. In less than a week a cone over 140 ft. high developed with a crater one quarter mile in circumference. Cone grew over 1,500 ft. in 1943. Still active and growing.

5. Guatemala.

a. Santa María Quezaltenango. Altitude 12,361 ft. Frequent activity between 1902 and 1908, and 1922 and 1928, after centuries of quiescence. Most dangerously active vent of all Central America at present.

b. Other volcanoes include Acatenango, 12,972 ft.; Fuego ("fire"), 12,581 ft.; Agua ("water"), 12,310 ft.; Zunil, 11,588 ft.; and Atitlán, about 7,600 ft.

6. Salvador: Active volcanoes include Izalco, "beacon of Central America", first appeared in 1770, now 6,000 ft. high and growing; San Salvador, which had a violent eruption in 1917; San Miguel, 8,000 ft. high, with a quietly steaming crater; Maricelino; Santa Ana; and Soledad.

7. Nicaragua: Volcanoes associated with Nicaragua are Telica, Coseguina, and Momotombo (4,126 ft.). Between Momotombo on the western shore of Lake Managua and Coseguina overlooking the Gulf of Fonseca, there is a string of more than 20 cones, many still active.

8. Costa Rica: Four volcanic cones whose bases merge are Poás (about 9,000 ft.), Barba (9,280 ft.), Irazú (11,320 ft.), and Turrialba (11,350 ft.).

D. Southeast border

1. Colombia: Nevado del Huila, a vapor-emitting volcano (18,700 ft.) and Tolima (18,438 ft.).

2. Ecuador.

a. Cotopaxi (19,498 ft.) is perhaps the highest active volcano in the world and possesses a beautifully formed cone. Has numerous eruptions.

b. Cayambe (19,062 ft.) is almost on the equator. Summit perpetually snow-covered.

c. Other volcanoes include Tungurahua (about 16,700 ft.), Sangay (17,470 ft.), and Antisana (altitudes of both 18,800 ft. and 19,355 ft. have been reported).

3. Peru and Bolivia have numerous active volcanoes.

a. Misti (Arequipa), in Peru. Altitude 19,200 ft. The world's highest meteorological observatory formerly located near its summit.

b. Sajama, in Bolivia. Altitude 21,320 ft.

c. Licancaur (Atacama) in Bolivia. About 19,500 ft. high. On border between Chile and Bolivia near Atacama.

4. Chile and Argentina: About 25 active or potentially active volcanoes. Little published information about this area. Most names of these volcanoes unknown to most people. In 1913 smoke issued from Hualalatri and Isluga (about 19° S. latitude). Smoke issued from San Pedro and Antofalla in 1901 and again in 1911. Cerro Azuán and Descabezado (about 35° S. latitude) had explosive eruptions in 1907 and 1913. Chillán (lat. 36° S.) developed a new crater in 1906. Llama (10,000 ft.) was in constant activity between 1903 and 1908 and erupted in 1927; appears to be a formidable volcano. Maipo active in 1905. Volcanic area about 40° S. latitude near Valdivia contains Villarica, active from 1906 to 1908 and in 1910; Riniñahue, active in 1907. During 1906 and 1907 Hegan and Calbuco issued steam and smoke clouds. Eruptions of Calbuco (6,600 ft.) were witnessed by research groups in 1920 and again in 1929. Farthest south of volcanoes on South American mainland.

Some Interesting Caves and Caverns of the World

Aggtelek. In Hungary. Large stalactitic cavern near Tornaia, about 20,000 ft. long.

Altamira Cave. In Spanish Pyrenees. Contains animal paintings (Old Stone Age art) on roof and walls of cave.

Antiparos. On island of same name in the Grecian Archipelago. Some stalactites are 20 ft. long. Brilliant colors and fantastic shapes.

Blue Grotto. On Island of Capri. Cavern hollowed out in limestone by constant wave action. Now half filled with water because of sinking coast. Name derived from unusual blue light permeating the cave. Source of light is a submerged opening, light passing through the water.

Carsbad Caverns. Southeast New Mexico. Probably largest cavern in the world. Only partly explored (32 miles). Three levels, 754, 900 and 1,320 feet below the surface.

Ederhoffer Grotto. Near Düsseldorf, Germany. Bones of the Neanderthal man were found here in 1856.

Fingal's Cave. On island of Staffa off coast of western Scotland. A sea cave carved by waves in lava flows. Penetrates about 200 ft. inland. Contains basaltic columns 20-40 ft. high that look hand hewn.

Fredrikshall. Norway. Large cavern calculated to be several thousand feet deep.

Grotto of Topazes. Switzerland. Roof and sides studded with topaz.

Guacharo (Oil-bird) Cave. Near Caripé in Venezuelan province of Cumaná. Cave as described by Humboldt had tropical vegetation far within its recesses. Inhabited by birds which are killed for their fat by the Indians.

Ice Cave. Dobschen, Czechoslovakia. Noted for its beautiful crystal wintry effects.

Jenolan. In Blue Mountains, New South Wales, Australia. Beautiful stalactitic formations both massive and delicate.

Kent's Hole. Near Torquay, England. Stalactitic type.

Kirksdale. England and Gallenreuth, Germany. Both caves remarkable for quantities of bones of elephants, rhinoceroses and hyenas found in them.

Luray Caverns. In Shenandoah Valley of Virginia. Has large stalactitic and stalagmitic columns. Very colorful.

Mammoth Cave. Limestone cavern in central Kentucky. Cave area is about 10 miles in diameter but has about 150 miles of irregular subterranean passageways at various levels. One "room" covers 5 acres.

Peak Cavern or Devil's Hole. Derbyshire, England. About 2,250 ft. into a mountain and lowest part is about 600 ft. below the surface.

Postumia (Adelsberg) Grotto. Near Postumia, Italian frontier station on Yugoslavian border. Best-known cave on the Carso. Piuca (Pivka) River flows through part of it. Caves have numerous and beautiful stalactites.

Singing Cave. Iceland. A lava cave. Name derived from echoes of people singing in the cave.

St. Michael's Cave. Principal one of numerous stalactitic caves in Rock of Gibraltar.

Wind Cave. In Black Hills of South Dakota. A limestone cavern but stalactites and stalagmites almost entirely missing. It has a variety of crystal formations called "boxwork."

Geysers

Geysers exist in many volcanic regions such as Japan and South America, but their greatest development is in Iceland, New Zealand and Yellowstone Park, Wyoming. The word "geyser," taken from the Icelandic "geysir," meaning spouting hot spring, now applies to any similar erupting spring.

Iceland. Principal geyser area is about 60 miles northwest of Mt. Hekla, where there are over 100 geysers and hot springs in about two square miles. The main ones follow.

Great Geyser (Geysir) sends up a column 160 to 180 ft. high intermittently from an opening more than 9 ft. across and 80 ft. deep.

Strokkur (Churn) is constantly bubbling and occasionally erupts.

New Zealand. There is a great profusion of boiling springs, steam jets and mud volcanoes northeast of Lake Taupo on North Island. Main geysers are Waiite with a 30-35 ft. column, Pohutu and Waimauku.

United States.

Yellowstone National Park, Wyoming. Nearly all the more than 100 geysers and 4,000 hot springs are located in the western portion of the park. The most important ones are:

Mammoth Hot Springs. Sides of a hill are steps and terraces over which flow the steaming waters of the hot springs laden with minerals. Each step is tinted by algae in the water to many shades of scarlet, orange,

pink, yellow and blue. Terraces are white where no water flows.

Norris Geyser Basin has 18 or more, the number varies.

Valentine—highest in basin, 75 ft. at 18-hour intervals; tube is 60 ft. long.

Minute—15–20 ft. high, several hours apart.

Others are small; these include Steamboat, Fearless, Veteran, Vixen, Corporal and Monarch.

Lower Geyser Basin. In the 1870's it had 680 geysers. Many now are only hot springs but at least 18 are active.

Fountain—At one time very well known. Water thrown 75 ft. in all directions and at all angles.

Some of the others are Turk, Bead and White Dome.

Midway Geyser Basin has vast steaming terraces of red, orange, pink and other colors; pools and springs.

Upper Geyser Basin.

Artemisia sends up a column 35 ft. high for 10 to 15 minutes every 24 hours.

Fan sends out fan-shaped eruptions about 60 ft. high every 2 or 3 days.

Riverside has an unusual cone; throws water 75 ft. obliquely over the river from lower crater for half an hour. About 5½ to 8 hours between eruptions.

Rocket by itself has jets up to 70 ft.

at intervals of 2 to 5 hours. When its neighbor Grotto erupts simultaneously the jet is only 10 ft.

Grotto throws water 20 to 30 ft. for 15 minutes to 8 hours.

Giant erupts to 250 ft., the highest in the world. Eruptions last an hour but are 3 days to 3 months apart.

Daisy sends water to a height of 100 ft. about every 90 minutes. Partial vacuum causes water to return for further flow.

Old Faithful sends up a column about 140 high at intervals of about 65 minutes, occasionally 35 to 80 minutes. Eruption lasts about 4 minutes. Only major park geysers that erupts at predictable intervals. Discharges about 15,000 gallons of water at each eruption.

Giantess erupts like a small volcano every six to nine months. The eruption rises to a height of 200 ft. and usually lasts 4½ hours.

Lion group—Lion, Lioness, Big Cub and Little Cub erupt as many as three times a day. Roar before the erupt.

Castle is reported to have largest and most imposing cone of any active geyser in the world. Resembles castle wall. Erupts once a day to a height of 75 ft. but throws water continually to about 20 ft.

Famous Waterfalls of the World

Waterfall	Location	River	Height, feet
Cuquenán	Venezuela	Cuquenán	2,000
Sutherland	South Island, N. Z.	Arthur	1,900
Tugela	Natal, South Africa	Tugela	1,800
Ribbon (Yosemite)	California	Small creek flowing into Yosemite valley	1,610
Gavarnie	Southwestern France	Gave de Pau	1,510
Upper Yosemite	California	Yosemite Creek, tributary of Merced	1,430
Takkakaw	British Columbia	Tributary of Yoho	1,200
Staubbach	Switzerland	Staubbach (Lauterbrunnen valley)	980
Trummelbach	Switzerland	Trummelbach (Lauterbrunnen valley)	980
Middle Cascade (Yosemite)	California	Yosemite Creek, tributary of Merced	910
Multnomah	Oregon	Multnomah Creek, tributary of Columbia	850

Selected Glaciers and Ice Fields of the World

I NORTH AMERICA

A. Alaska. Greatest abundance between 56° and 61° N. In Alaska 170 have been named. About 31 are live glaciers (those that discharge icebergs into the sea).

1. Malaspina. Along seaward base of Mt. St. Elias. Largest existing continental glacier outside of Antarctica. Covers about 1,200 square miles and extends 50-80 miles along the coast. Part of it lies above the snow line (2,500 ft.) but bulk of it lies between snow line and 1,500 ft.

2. Muir. South slope of St. Elias Mountains. Covers over 350 square miles. About 50 miles long, 25 miles wide and 1,500 ft. deep. Reported to move 6-10 ft. a day but it is retreating at the rate of 3 miles in 15 years. Discharges "bergs" into Glacier Bay. Much visited prior to earthquake in 1899 which shattered the glacier and increased discharge of ice so that steamers no longer found it safe to approach close to the face.

3. Prince William Sound. Eleven live glaciers. Columbia Glacier has a front 4 miles wide and 300 ft. high.

4. Wrangell Range contains one of the most compact systems of glaciers in Alaska.

5. Alaska Range

a. North slopes: Source of Herron is the snowfields of Mt. Foraker; Peters Glacier encircles northwest end of Mt. McKinley, and Muldrow is on the northeast slope.

b. South slopes: Greatest glaciers of Alaska Range on south slopes exposed to moisture-bearing winds of the Pacific. Largest are in Yenta and Chulitna river basins.

6. Coast Range

a. Sumdum and Dawes, east of Admiralty Island.

b. Taku Glacier, a mile wide and 100-300 ft. high at its face. Extends down east side of Coast Range and varies from two to three miles in width. Located near Juneau.

B. Canada. The Rockies and Selkirks support hundreds of glaciers, mostly not very large, but some having 100 square miles of snowfield. Two peaks with glaciers are Mt. Joffre (11,361 ft.) and Mt. Robson (12,972 ft.).

C. United States.

1. Mt. Shasta has minor glaciers on its northern slope.

2. Mt. Rainier contains largest accessible single-peak glacier in U. S. There are 48 square miles of glaciers ranging in width from 50 ft. to one mile, and in thickness from 50 ft. to many hundreds of feet.

3. Rocky Mountains. Over 60 small glaciers, remnants of glacial era, remain in

Glacier National Park. Other glaciers scattered throughout the Rockies such as Hallett Glacier in Colorado.

4. Sierra Nevada. About 65 small glaciers remain in altitudes above 11,000 ft. Largest glaciers on flanks of Middle Palisade, North Palisade, Ritter, Lyell, Maclure, and Conness Peaks.

D. Greenland. About 86% of surface or 720,000 square miles, covered by an ice cap thousands of feet thick. In several districts glaciers border and discharge huge icebergs into the sea. Those originating on the west coast are much larger than those of the east coast.

The districts are:

1. Between Cape York and Wandel Land 233 miles. Ice forms 186 miles of this coast and reaches the sea in at least 70 places. Peary Glacier, one of the largest is 12½ miles long, and the outermost 25 miles floats on the water. Others with more than 6 miles sea frontage are Steenstrup, Nanassen, King Oscar, Holm, John Ross, Wulff, and Dietrichson.

2. Upernivik District. One fifth of the total ice front reaches the sea. Giesecke and Upernivik are the largest. Upernivik is reported to move about 100 ft. per day.

3. Jacobshavn District. Tallest icebergs originate here. Some 330-450 ft. high have come from the Jacobshavn Glacier. Cubic content of one measured contained 7,851,848 cubic yards, twice the volume of the concrete in Boulder Dam.

4. Godthaab District. Numerous glaciers extend from inland ice to heads of fiords.

5. Fredrikshaab District. Fredrikshaab Iceblink is about 12 miles across. Moves about 10 ft. a day.

6. Jullanshaab. Numerous glaciers extend from inland ice to the sea and produce icebergs. Sermilik Fiord is an active area.

7. Between Igdluarssuk and Angmagssalik. Ice extends to the sea, partly as broad glaciers and as an infinite, white, level plain.

II SOUTH AMERICA

Except for southern area, there are few glaciers of any size. Some alpine glaciers exist on the higher peaks even at the equator but rarely extend beyond the snow line. The snow line of the Tropical Andes is between 15,000 and 16,000 ft. at 37° S., 6,500 ft.; at 40° S., 5,000 ft.; and at Tierra del Fuego, 2,300 ft. South of 46° S., small ice fields form a continuous mantle over the central mountain zone between Chile and Argentina. One example is the Balmaceda Glacier, Last Hope Sound, Chile.

II. EUROPE

A. Iceland. Snow fields and glaciers cover 17% square miles (13%) of its surface. There are 120 known glaciers.

1. Vatnajökull covers 3,280 square miles. The largest glacier of this group covers 1,000-200 square miles.

2. Other large glaciers or snowfields are: Traefajökull, the highest glacier in Iceland; Myrdalsjökull and Eyjafjallajökull which cover 390 square miles; Hofsjökull, covering 520 square miles; and Langjökull, covering 500 square miles.

3. Some smaller icefields in Iceland are Lamujökull, Drangajökull, Tungnafellsjökull, Eiríksjökull, Tindjallajökull, and Skeidararjökull.

B. NORWAY.

1. Jostedalstraen. Largest European icefield (400-500 square miles). From it most glaciers extend to within 150-200 ft. of sea level.

2. Jotunheim. Ice cap is broken by deep valleys.

3. Folgefonn. Between Hardangerfjord and its branch, Sörfjord. Covers 110 square miles. Most southerly large area in Norway.

4. Svartisen. Covers 230 square miles and from it glaciers descend almost to sea level.

5. Engabreen. A small glacier about 70° N. Enters sea in Jokulfjord and gives birth to miniature icebergs.

6. Selland. On island of same name south of Hammerfest. Glacier covers about 6 square miles.

C. ARCTIC ISLANDS.

1. Jan Mayen. An island between Greenland and north of Norway. Henry Hudson discovered it in 1607. Contains fully developed glaciers which discharge icebergs into the sea.

2. Other ice-laden islands include Spitzbergen, Novaya Zemlya, Franz Josef Land and others.

D. Pyrenees. Glaciers confined to northern slopes of central Pyrenees form a narrow zone at the crest of highest mountains. Descend but little down the valley. Argeles Valley contains the best known glacier.

E. Alps. Estimated to contain 1,200 separate glaciers and snow fields which probably cover 700 square miles. Greater number in Canton Valais. Lowest point reached by Alpine glaciers varies but is as low as 3,200 ft. above sea level (Grindelwald). Average altitude is about 4,200 ft. and perpetual snow line between 8,000 and 9,500 ft.

1. Aletsch Glacier is 16 miles long and with its snow fields covers over 50 square miles.

2. Unteraar and Vlescher in the Bernese Oberland are each 10 miles long.

3. Gorner is 9 1/4 miles long.

4. Mer de Glace is 9 1/4 miles long. Covers 16 square miles. On north slope of Mt. Blanc. Much visited. Average flow 2 feet per day in summer and autumn. Descends to 3,770 ft.

F. Caucasus Mountains. Snow line between 9,500-10,000 feet on north but 1,000 ft. higher on south facing slopes. Estimated 900 glaciers in western half of Middle Caucasus. Few in eastern half. All of the glaciers in the Caucasus are estimated to cover 625-650 square miles. Best known glaciers include:

1. Maliev on Kasbek, 36 miles long.

2. Bezingi, or Ullu, 10.5 miles long, descends to 6,535 ft.

3. Leksyr, 7.5 miles long, descends to 5,690 ft.

4. Tseyar or Zea, 6 miles long, descends to 6,730 ft.

5. Karagom, 9.5 miles long, descends to 5,790 ft.

6. Dyevdorak, or Devdorak, 2.5 miles long, descends to 7,530 ft.

7. Khaldeh or Gereshe, 4 1/4 miles long.

8. Tuyber, 6.5 miles long, descends to 6,565 ft.

9. Tsanner or Zanner, 6.5 miles long, descends to 6,325 ft.

10. Adish or Lardkhat, 5 miles long, descends to 7,450 ft.

IV ASIA. Thousands of little-known small glaciers exist on the high mountains of Asia, particularly the Himalayas, Karakoram, Hindu-Kush, Kunlun, and Tien-Shan Mountains. The largest which have been explored are:

A. Chogo Lungma, Hispar, Baltoro, and Biafo glaciers in the Karakorum Range. They are among the largest existing glaciers.

B. Zemu, about 18 miles long in the Kanchenjunga Range (Himalayas). Several others in the same range are 11 to 16 miles long.

C. Rongbuk, on north slope of Everest, ends at about 16,500 ft.

D. Kyetrack, on north slope of Everest, ends at 15,400 ft.

E. Fedchenko, in the Pamirs (Salaisk Range), west of Lake Kara Kul in the Muk-Su Basin. One of largest glaciers in the world with the exception of arctic glaciers. About 50 miles long, 14,000 ft. above sea level with temperature often as low as -76° F.

F. Youzhni Inilchek. In Tien-Shan Range. About 50 miles long.

V AFRICA. A few glaciers located on two high mountains.

A. Mt. Kenya (17,040 ft.). West of the main divide 15 glaciers descend north and south. Lewis and Gregory, each 1 mile long, are the two largest. Kolb is much smaller. Most terminate between 14,800 and 14,900 ft.

B. Mt. Kilimanjaro (19,319 ft.). Several small glaciers, two on the west side and three on the northwest side.

VI AUSTRALIA AND NEW ZEALAND. No part of Australia is high enough for snow to remain throughout the year. New Zealand has a glacial system of some magnitude on South Island.

A. East slope of Southern Alps.

1. Tasman, the largest of New Zealand's glaciers. Eighteen miles long by $1\frac{1}{4}$ miles wide. Terminal face 2,000 ft.

2. Murchison covers 5,800 acres. Eleven miles long.

3. Mueller covers 3,200 acres. Eight miles long.

4. Godley covers 5,312 acres. Eight miles long.

5. Hooker covers 2,416 acres. Seven and one quarter miles long.

B. West slope of Southern Alps. Glaciers more numerous than east coast owing to greater precipitation and descend to lower levels. Largest are:

1. Fox, nine and three-quarter miles long, terminal face 670 ft.

2. Franz Joseph, eight and one-half miles long, terminal face 690 ft.

VII ANTARCTICA. Probably less than 100 square miles of its 5,000,000 square miles is free from permanent ice covering. Doubtful if ice is more than 2,000 ft. thick except in basins but some estimates give several miles. Ice fronts vary from 100-400 miles in width at the sea. Icebergs 5 to 10 miles long often break off from ice fronts.

Largest Lakes of the World

Lake	Location	Area, sq. mi.	Maximum depth, ft.	Length, miles	Surface elevation above sea level, ft.
Superior	United States and Canada	31,810	1,180	350	602

Emeralds were once believed to be beneficial to the eyes and amethysts were thought to prevent drunkenness. The belief in lucky stones still exists.

Ireland is not the only land that has no snakes. There are other snakeless regions in the world, including New Zealand and the Azores.—*Encyc. Brit.*

World Extremes of Climate

Highest recorded temperature:

World: 136° F. at Azizlia, Libya, North Africa, September 13, 1922.

United States: 134° F. at Death Valley, California, July 10, 1913.

Lowest recorded temperature:

World: -90° F. at Verkhoyansk, Siberia, U.S.S.R., February 5 and 7, 1892.

United States: -66° F. at Yellowstone Park, Wyoming; February 9, 1933.

Highest mean annual temperature:

86° F. at Massawa, Eritrea, Africa

Lowest mean annual temperature:

-14° F. at Framheim, Antarctica

Maximum rainfall for 24-hour period:

46 inches at Baguio, Luzon, Philippines, July 14-15, 1911.

Maximum recorded rainfall in one month:

241 inches at Cherrapunji, India, August 1841 (over 150 inches fell in 5 consecutive days). Average annual rainfall is 426 inches.

Minimum recorded rainfall:

World: .05 inch at Iquique, Chile, average yearly fall during 25 years.

United States: 3.93 inches at Bagdad, California, the total for five years, 1909-1913.

Average annual precipitation for the United States is about 29 inches.

Louisiana is the wettest state, with an annual average of 55.11 inches.

Nebraska is the driest state, with an annual average of 8.81 inches.

Highest local average annual rainfall in the United States was 150.73 inches at Wynnocsee

Oxbow, Washington, 13-year record.

Greatest 24-hour rainfall in the United States was 23.22 inches at New Smyrna, Florida, October 10-11, 1924.

Heavy snowfall records include 60 inches in one day at Giant Forest, California; 42 inches in 2 days at Angola, New York; 54 inches in 3 days at The Dalles, Oregon; and 96 inches in 4 days at Vanceboro, Maine. Greatest seasonal snowfall was 884 inches, over 73 feet, at Tamarack, California, during 1906-07.

Languages of the World

The word "eavesdropper" is derived from "eavesdrop," meaning the width of ground around a house or building which receives the rain water dropping from the eaves. A person who stood within the "eavesdrop" of a house—close enough to pry into others' business or listen to secrets—is called an "eavesdropper."

Crop failures are more likely to occur in India than in any other country in the world because of its tropical location and dependence on monsoon rains. Famine occurs in some portion of India every year, with widespread suffering every five or ten years and severe famine every 50 or 100 years.—*Encyc. Brit.*

The Seven Wonders of the World

Conferred upon a group of works of art which gained pre-eminence during the Alexandrian era.

THE PYRAMIDS OF EGYPT

A triumvirate of three structures, those of *Khufu*, *Khafra*, and *Menkaure*, which are located at Gizeh, form the architectural group that is often called the first wonder of the world. The largest pyramid, built by Cheops, has an original height estimated to be about 482 feet with a base that covers nearly 13 acres. The inner sepulchral chambers which are reached by passageways leading from the east, were designed to be the final resting place of the King only, and were never intended to be a family monument. The pyramid of *Khufu* is estimated to have been built in the years 2900 to 2877 B. C.

THE HANGING GARDENS AT BABYLON

These gardens are associated with Semiramis, a mythical Assyrian Queen who was reputed to have built the city of Babylon. The gardens cover and overhang the *zigurat* (the flattened portion at the top of a pyramid generally used as a place of worship) which was supposedly built by Nebuchadnezzar to gratify his Median Queen. The structure is said to have been about seventy-five feet high.

THE STATUE OF ZEUS (JUPITER) AT OLYMPIA

The statue of "The Father of Gods and Men" was wrought by Pheidias who is considered to have been the greatest of Greek sculptors. The only trace of the statue is to be found on copies of coins of the time and it is surmised that the god was seated on a throne, his body carved in ivory and his robe sculpted in gold.

The two-day eruption of the volcano Krakatoa, Netherlands Indies, 1883, was so violent that actual sounds of the explosion were heard nearly 3,000 miles away. This distance is the greatest at which sound waves have ever been perceived. Dust, stones and ashes were shot up into the air more than 17 miles, and a remarkable series of red sunsets appeared all over the world, caused by the spread of fine volcanic dust through the atmosphere.

The production of cheese is the earliest form of dairy manufacturing. Recognizing the strength-giving properties of cheese, the Jews and the Romans fed it to their armies, and the Greeks gave it to wrestlers to increase their endurance.

THE TEMPLE OF ARTEMIS (DIANA) AT EPHESUS

Built by one of the family of Tarquins who ruled in the celebrated Etruscan era in the history of Rome. The temple was constructed on the *Aventine*, one of the famous 7 hills of ancient Rome.

THE MAUSOLEUM AT HALICARNASSUS

Erected by Queen Artemisia in 353 B. C. in memory of her husband, King Mausolus of Caria in Asia Minor. Some remains of this monument were brought to England in 1859 by Sir Charles Newton and placed in the British Museum. The structure originated the word that is now used to mean a monument erected to receive the remains of a deceased person.

THE COLOSSUS AT RHODES

A statue of Helios (Apollo), about 12 feet high and constructed by the sculptor Chares in 280 B. C. The work was reputed to have taken the sculptor twelve years to complete and was supposedly situated in the harbor of the city. The statue was thrown down by an earthquake in 22 B. C. and the remains were sold some 100 years later for the purposes of making instruments of war.

THE PHAROS OF ALEXANDRIA

On the eastern point of Pharos Island, King Ptolemy Philadelphus commissioned Sostratus of Caria to build the famous lighthouse which became the prototype for all future lighthouses. The structure was claimed to be 400 feet high.

Perhaps the world's most remarkable tree is the Moriche palm of Venezuela. Its fruit is edible and its juice is made into beer. Its sap is made into wine and its pith into bread. Its leaves furnish an excellent thatch and the fiber extracted from their midribs is used for fishlines, cordage, hammocks and nets. Its wood is hard and makes good building material.

The entire Chinese language is made up of words of one syllable. Each sound may have ten or more different meanings, and the language has no rules of grammar.

Two hundred different crimes were punishable by death under English law at the time that America was colonized.—*Encyclopaedia Brit.*

Ancient Empires

The *Egyptian and Babylonian* empires, near Eastern civilizations whose cultures mark the beginning of written history, had their origins in the nebulous period of ancient history prior to the year 4000 B.C. They developed rapidly in the fertile river valleys of the Nile in Egypt and the Tigris-Euphrates in Mesopotamia after the discovery of metals and the invention of writing. Their governments were all-powerful, with the people subjugated and without political rights. The Egyptians regarded their king as a god. In Babylon, the ruler was a priest-king, earthly representative of the gods. Nevertheless, these Near Eastern cultures made great contributions in the eternal march of man; they advanced the ways of making and doing things, produced the earliest literature, developed the principles of law (the code of Hammurabi, Babylonian king of the 20th century B.C., the oldest code of law) and science, learned the basic principles of art, and evolved early religious worship.

The influence of Babylon and Egypt was felt in the rise of the Semitic tribes of Syria, the Hittites in Asia Minor, and the people of the Aegean region. Between the years 1200 and 800 B.C., the small Syrian states grew to great power and then were overwhelmed by the great empire of the Assyrians, the warlike peasants of the Tigris valley, who took the lessons learned from the Babylonians and spread that culture over their domains. The Assyrians, like the Egyptians and the Babylonians, in turn fell under the power of the Persians in the century between 600 and 500 B.C. By 525 B.C., the Persian Empire extended from India to Egypt, the greatest the world had ever seen.

The lessons learned by these early Near Eastern civilizations were transmitted to Greece, which developed its illustrious empire in the Aegean region, after the inhabitants of the island of Crete had absorbed the Egyptian culture. The mainland Greeks overthrew the Cretans and in turn were succeeded by the Doric Greeks, who read their culture across the Aegean, the Asia Minor coast, and into the Mediterranean and Black Sea regions. The characteristic Greek political institution was the city-state, first ruled by kings and often temporary monarchical tyrannies, and finally by the participation of free citizens. Thus the Greeks developed the theory of the dignity of the free man. This political growth resulted eventually in the establishment of the Athenian democracy. Literature and the arts flourished, and by the

5th century B.C., when Athens became the great city of the Greeks, drama had risen to full maturity with the great tragedies of Sophocles and Euripides and the comedies of Aristophanes. Architecture and art advanced apace. The Greeks, learning much from their Egyptian teachers, produced such superb buildings as the Parthenon and created amazingly beautiful statues through the use of living models. Religion, which was closely linked with art, also flourished, as did the development of philosophy, under the great Socrates (469-399 B.C.), Plato (427-347 B.C.), and Aristotle (384-322 B.C.). Wars weakened the city-states, and finally they fell to the Macedonians under Alexander the Great in the 4th century B.C. Alexander also conquered the vast Persian empire.

Last among the great ancient empires was the *Roman*, which developed in Italy and gained control over the Mediterranean region after absorbing the culture of Greece and combining with it new principles of law and art and teaching their new learning to the West. The development of the Roman civilization began in the year 500 B.C., when the peoples on the peninsula of Italy freed themselves from the rule of the Etruscans. The Romans, with a republican form of government, speedily conquered Italy and the Mediterranean region, and the Roman governors became men of great wealth, corrupting the city-state system and making it a graft-ridden machine of exploitation. The failure of the government to check this self-seeking influence brought on a revolt which resulted eventually in the rise of Julius Caesar to dictatorship in 46-44 B.C. Caesar's murder in the Senate at Rome was followed by the establishment of the one-man rule of Augustus over the Roman Empire. The Near Eastern, Greek and Roman cultures blended, and the empire was welded together in universal loyalty to the emperor. Legal practices were developed and became the foundations of modern law. Industry and trade were advanced and extended to China and India. Great roads, bridges and buildings were constructed, and literature attained a new peak with the *Aeneid* of Vergil and the writings of Horace, Seneca, and Juvenal. Stoic philosophy was taught by Marcus Aurelius, the philosopher-emperor, and Judaism spread, to be followed by Christianity. The political structure of this last of the great civilizations of ancient times began to crumble in the 3d century A.D., with civil wars for the imperial throne.

Paintings and scrolls on the walls of Chinese homes are changed periodically to keep them in harmony with the seasons.

An organized system of Shorthand was developed and used by the Romans as far back as 63 B. C.—*Encyc. Brit.*

Explorations and Discoveries

Continent and country or place	Event	Explorer or discoverer	Date
AFRICA—			
African continent	Circumnavigated	Phoenicians	600 B.C.
Sierra Leone	Visited	Hanno, Carthaginian seaman	470 B.C.
Congo River	Discovered	Cao, Portuguese navigator	1484 A.D.
Cape of Good Hope	Doubled	Bartholomew Diaz, Portuguese navigator	1488
Abyssinia	Visited	Covilhao, Portuguese envoy	1490
Gambia River	Explored	Mungo Park	1795
Sahara Desert	Crossed	Denham and Clapperton, English explorers	1822
Zambesi River	Discovered	Livingstone, Scottish explorer	1851
Victoria Falls	Discovered	Livingstone	1855
Sudan	Explored	Barth, German explorer	1856
Lake Tanganyika	Discovered	Burton and Speke, British explorers	1858
Congo River	Traced	Stanley, British explorer	1877
ASIA—			
Punjab, India	Visited	Alexander the Great, of Greece	327 B.C.
China	Visited	Al Masudi, Arab Traveler	920 A.D.
India	Visited	Benjamin of Tudela, Spaniard	1160
Karakorum	Visited	Friar John of Carpini	1246
China	Visited	Marco Polo	1270
Tibet	Visited	Odoric, Italian monk, at Lhasa	1320
Southern China	Explored	Conti, Italian adventurer	1440
India	Visited by Cape route	Vasco da Gama, Portuguese	1497
Japan	Visited	St. Francis Xavier of Spain	1549
White Sea (Russia)	Reached	Chancellor, English navigator	1553
Persia (now Iran)	Reached	Jenkinson, English traveler	1561
Central Asia	Crossed	Goes, native of Azores	1605
Arabia	Explored	Niebuhr, German explorer	1761
China	Explored	Richthofen, German scientist	1868
Mongolia	Explored	Przhevalski, Russian explorer	1873
Central Asia	Explored	Hedin, Swedish scientist	1890-1908
EUROPE—			
Ireland	Visited	Himilco, Carthaginian merchant	500 B.C.
Shetland Islands	Visited	Pytheas of Marseilles	320 B.C.
North Cape	Rounded	Ottar, Norwegian explorer	852 A.D.
Iceland	Colonized	Norwegian vikings	930
NORTH AMERICA—			
Greenland	Colonized	Eric the Red (Thorvaldson), discoverer	982 A.D.
Labrador	Discovered	Leif Ericsson, Norwegian explorer	1000
San Salvador	Discovered	Christopher Columbus, Italian navigator	1492
North America	Coast discovered	John Cabot, for British	1497
Pacific Ocean	Discovered	Balboa, Spanish explorer	1513
Florida	Explored	Ponce de Leon, Spanish explorer	1513

Continent and country or place	Event	Explorer or discoverer	Date
Mexico	Conquered	Cortez, Spanish adventurer	1518
Gulf of St. Lawrence	Discovered	Cartier, French navigator	1534
Southwest U. S.	Explored	Coronado, Spanish explorer	1539-42
Colorado River	Discovered	Alarcon, Spanish explorer	1540
Grand Canyon	Discovered	Cardenas, Spanish explorer	1540
Mississippi River	Discovered	De Soto, Spanish explorer	1541
Frobisher Bay	Discovered	Frobisher, English seaman	1553
Maine Coast	Visited	Champlain, French explorer	1604
Chesapeake Bay	Visited	Smith, English colonist	1608
Hudson River	Explored	Hudson, English navigator	1609
Baffin Bay	Discovered	Baffin, English navigator	1616
Hudson Bay, Canada	Discovered	Hudson	1610
Lake Michigan	Navigated	Nicolet, French explorer	1634
Arkansas River	Discovered	Marquette and Joliet, French explorers	1673
Mississippi River	Explored	La Salle, French explorer	1682
Bering Strait	Discovered	Bering, Danish explorer	1728
Alaskan Coast	Explored	Gwosdef, Russian sailor	1731
MacKenzie River (Canada)	Discovered	McKenzie, Scottish explorer	1789
Northwest U. S.	Explored	Lewis and Clark	1804-06
Yellowstone Park	Discovered	Colter, American pioneer	1807
Mammoth Cave	Discovered	Hutchins, American explorer	1809
Great Salt Lake	Discovered	James Bridger, American explorer	1824
Grinnell Land	Discovered	Kane, American explorer	1853
Northeast Passage (Arctic Ocean)	Accomplished	Nordenskjold, Swedish explorer	1879
Greenland	Explored	Peary, American explorer	1892
Northwest Passage	Navigated	Roald Amundsen, Norse navigator	1906
SOUTH AMERICA—			
Continent	Discovered	Amerigo Vespucci, Italian navigator	1497
Brazil	Discovered	Cabral, Portuguese explorer	1500
Peru	Conquered	Pizarro, Spanish adventurer	1532
Amazon River	Explored	Orellana, Spanish explorer	1541
Cape Horn	Discovered	Schouten, Dutch navigator	1616
OCEANIA—			
Western Australia	Sighted	Portuguese sailors	1601
New Guinea	Explored	Torres, Spanish navigator	1606
Australia	Visited	Hartog, Dutch explorer	1616
Tasmania	Visited	Tasman, Dutch navigator	1642
Australia	Crossed	Sturt, English explorer	1828
Australia	Explored	Burke and Wills, Irish explorers	1861
MISCELLANEOUS—			
Ocean exploration	Expedition	Magellan's ships circumnavigate the globe	1521-22
Spitzbergen (Arctic Europe)	Visited	Barents, Dutch navigator	1594
Antarctic Circle	Crossed	Cook, English navigator	1773
Antarctica	Discovered	Bellingshausen, Russian navigator	1821
Antarctica	Explored	Wilkes, American explorer	1840
North Pole	Discovered	Peary, American explorer	1909
South Pole	Discovered	Roald Amundsen, Norse navigator	1911

MUSEUMS OF THE WORLD

Source: Encyclopaedia Britannica.

The museum, as it is now known, originated in the Renaissance when the revival of interest in the arts and classical antiquity led princes, nobles and humanists to amass specimens of historical value and to house their collections in special buildings or galleries.

However, as dilettantism, rather than purely scientific interest motivated the collectors, little method was shown in classifying and cataloguing the data, which were thrown together haphazardly. In the latter part of the 19th century, many museum curators started the task of systematizing collections. In recent years, efforts also were made to attract the public by modernizing the interiors of museums, thus attempting to remove the popular misconception that museums were merely repositories for objects of the dead past.

In the 20th century, the United States attracted a great deal of valuable objects of art and antiquity as well as world-famous paintings.

World Art Museums

Among the more important world art museums are:

The British Museum, in London, has two principal divisions—the Library and Department of Antiquities. Its library is one of the largest in the world, and contains such outstanding treasures as the Codex Alexandrius of the Greek Bible, the best collection of Greek papyrus from Egypt and vast collections of original historical manuscripts of incalculable historical value. In the Department of Antiquities are some of the famous historical art works of the world, including the Elgin Marbles and the Rosetta Stone, to mention only a few.

Victoria and Albert Museum, London, whose primary object is to furnish examples to illustrate the history of art, with emphasis on architecture and sculpture, ceramics, engraving, book production, paintings, textiles, etc. It contains about 550,000 volumes and 250,000 photographs.

National Gallery, London, contains a great number of old Masters, including paintings by De Vinci, Michelangelo, Pintoretto, Mantegna, Titian, Bellini, Van Dyck, Rubens, Rembrandt, Holbein, Constable and Turner.

Wallace Collection, London, bequeathed to the government in 1897 by the widow of Sir Richard Wallace, contains many objects of art and curios of French origin and first-

rank canvases and etchings of Italian, Spanish, Flemish, Dutch and English schools.

Walker Art Gallery, Liverpool, includes many examples of drawings, paintings, sculptures, water colors and etchings dating from the 13th to the 20th centuries.

In France, the most famous gallery is the *Louvre* in Paris, noted for the magnificence of its architecture as well as for its art collection which is the largest in the world. Other French museums of importance are *Cluny*, *Luxembourg*, *Rodin*, *Guimet* and *Carnavalet*, all located in Paris.

Among the magnificent Italian museums, the *Museo Nazionale* at Naples contains the best arranged and best classified collection in Italy. The *Uffizi Gallery* in Florence, founded by the Medicis, has one of the world's largest and best collections of Italian art. Other galleries in Florence are the *Pitti Palace*, the *Picture Gallery*, the *Academy of Fine Arts* and the *National Museum*. Rome has numerous museums and six well-known museums are located in the Vatican.

In Germany, the *Kaiser Friedrich Museum*, the *Old and New Museums* and the *Schloss Museums*, in Berlin, are perhaps the best known.

The *Royal Museum of Fine Arts* in Brussels has a fine collection of French, Flemish and Dutch masters and houses many canvases by Rubens, Van Dyck, Jordaens, Rembrandt, Frans Hals and Jan Steen.

The *State Museum* in Amsterdam contains superb works by Rembrandt, Vermeer and others.

Among the notable museums in other countries of Europe are the world-famous art gallery *Museo del Prado* in Madrid; the *State Tretyakov Gallery* and the *Museum of Fine Arts*, Moscow; the *Tokyo Imperial Household Museum*, famed for its many Oriental paintings and examples of Oriental workmanship in lacquer, jade, ivory and metal. The *Nara Imperial Museum*, also in Tokyo, contained a representative collection of Japanese sculpture, paintings and archaeological and historical exhibits. The *Imperial Treasure House* in Nara Park is a wooden structure dating from about 752 A. D., containing treasures of religious and historical significance. Before World War II, only persons accredited by the emperor were permitted to view its treasures.

Science Museums

Scores of notable museums of science are found in the British Empire.

The *Ashmolean Museum*, the oldest in Great Britain, was built in 1679 by the University of Oxford and houses a collection of natural history objects and archaeological rarities. In 1860 its zoological and botanical collections were moved to the New University Museum. A collection of ancient mathematical instruments was added later.

Science Museum of London has exhibits of scientific instruments, apparatus, machines and appliances which review the progress of science and the history of invention.

Kew Gardens in London house a herbarium and an extensive botanical collection.

Other famous London museums of science are the *Hunterian Museum* of the Royal College of Surgeons devoted to anatomy—human and comparative—and to pathology; and the *Horniman Museum* which deals with zoology and anthropology (including archaeology and ethnology).

The *Liverpool Museum* contains valuable collections of natural history and antiques and is divided into departments of zoology, botany, geology, archaeology and ethnology.

The *Manchester Museum* serves as both a municipal museum and a university museum.

The *Bristol Museum* contains departments of geology, zoology, botany, archaeology and Bristol antiquities.

The *Natural History Museum* in Hull is but one of the many museums in that city. Others are *Wilberforce House*, *The Museum of Fisheries and Shipping*, the Mortimer collection of prehistoric antiquities, the *Museum of Commerce and Transport* and the *Folklore Museum*.

In Scotland are the famed *Royal Scottish Museum*, which has collections in art, ethnography, natural history, technology and geology; the *National Museum of Antiquities* of Scotland noted for its coin and manuscript collections. Both are in Edinburgh. In Glasgow are the *University of Glasgow Museum* and the *Zoological Museum*.

The *Science Museum* at Dublin and the one at Belfast have important science collections.

Calcutta has three noted museums: the *Indian Museum*, outstanding for its marine fauna and vertebrate fossils; the *Geological Museum* of the Government Survey of India and the herbarium of the *Royal Botanical Gardens*. In Bombay are the *Victoria* and *Albert Museum* and the museum of the *Bombay Natural History Society* which is mainly zoological.

In Australia are the *Queensland Museum*, Brisbane; the *Geological Survey Museum*, also at Brisbane; the *South Australian Museum*, Adelaide; and the *National Museum of Victoria* and the *National Herbarium of Victoria*, both at Melbourne.

New Zealand contains the *Canterbury Museum*, Christchurch, rich in local fauna, flora and geological items, and a Maori and Polynesian ethnological collection. The *Otago University Museum* of natural history and ethnology, the *War Memorial Museum* at Auckland and the *Colonial Museum* at Wellington are others of note.

The *South African Museums*, Capetown, hold general and local history collections and others illustrating anthropology, ethnology and colonial art. The *Durban Museum* contains much anthropological material; the *Rhodesian Museum*, Bulawayo, deals with the zoology, geology and botany of Rhodesia; and at Cairo are the Egyptian collections and at Gizeh the *Geological Survey Museum*.

In Europe, the most important museums are the *Muséum d'Histoire Naturelle* in Paris, the famous *Musée de Océanographie* in Monaco, the *Natural History Museum* in Lisbon, the *Rijks Museum* of geology, mineralogy and zoology at Leyden (Holland), the *Royal Museum of Natural History* at Stockholm, the *National Museum* at Copenhagen, the *Museo Civico* at Naples, the natural science museums in Bern, Geneva, Lausanne and Neuchâtel, the *Geological Survey Museum* at Athens, the *Imperial Natural History Museum* at Vienna, the *Musée Sociale* in Budapest, the *National Museum* of Prague, the *Imperial Academy of Sciences* at Leningrad, the *Rumiantsov Museum* in Moscow and the *Mining Museum* in Leningrad.

Famous science museums in Germany were: the *Museum für Naturkunde*, the *Ethnological Museum*, the *Anthropological Museum*, the *Mineralogical Museum* and the *Agricultural Museum*, all in Berlin; the *Natural History and Ethnological Museums* in Hamburg; and the *Deutsches Museum* in Munich.

Other museums of note are the *Constantinople Museum*, the *American University Museum* at Beirut, the museum attached to the *Imperial University* at Tokyo, the *Zi-Ka-Wei Museum* near Shanghai, the *National Museum* at Santiago (Chile), the *Bahia State Museum* in Brazil, the *Argentine National Museum of Natural History*.

The oldest scientific instrument is believed to be the Astrolabe. Invented by the Greeks 2,000 years ago, the astrolabe was used for telling time and latitude.—*Encyclopaedia Brit.*

LIBRARIES OF THE WORLD

Source: Encyclopaedia Britannica.

The collection of printed matter for reference and reading purposes is as old as civilization itself. Data unearthed by archaeologists disclose that libraries were tant in ancient Babylonia and Assyria. An excavation at Nineveh some 95 years ago unearthed clay tablets with cuneiform characters, indicating that Nineveh had a library of some 10,000 works and documents in tablet form.

Libraries existed in the days of the pharaohs. After papyrus replaced the bulky clay or stone slabs, libraries grew in size and importance in Egypt; early Egyptian records say there was an important library at Memphis.

It was customary for scholars in ancient Greece to have libraries. In the great libraries of Alexandria (estimates as to the number of volumes ran from 42,000 to 100,000), the works were classified and catalogued. The Alexandria libraries were destroyed in 640 A. D.

The libraries of Rome were frequently augmented by volumes brought home from foreign wars as loot by the Roman legions. Private libraries were famed and Cicero and Atticus were zealous in building up their own private collections. A public library dedicated to the public was located on Mount Aventine and in the 4th century there were said to have been 28 public libraries in Rome.

The mediaeval period saw the growth of several libraries among private collectors in Gaul. The Irish monasteries were the repositories of numerous volumes. Charlemagne and Pope Sylvester II were great private collectors. The spread of Catholicism throughout Europe also saw the growth of libraries. As the monastic orders were virtually the sole producers and reproducers of books, the monasteries became famed repositories of the early illuminated works. Virtually all monasteries had libraries, the most famous of which were founded by the Benedictine, Augustinian and Dominican orders. In Italy the most important monastic library was lodged at Monte Cassino which was destroyed by the Saracens in the 9th century.

The Arabs too had many excellent libraries. Greek texts were translated into Arabic and colleges and libraries arose everywhere throughout the Islamic world, notably at Baghdad, Cordova, Cairo and Tripoli.

In the Renaissance the collection of books was avidly pursued by the wealthy princes and nobles. Charles V of France collected, for those days, a formidable library of 910 volumes. Cosimo de Medici laid the foundation of a great library in Florence. Other Italian noblemen also

amassed scores of volumes. But it took the invention of the printing press by Gutenberg and the development of this labor-saving device really to give impetus to the growth and spread of libraries.

Among the great libraries of the world, the *British Museum* ranks among the first. It has about 3,750,000 printed volumes and about 56,000 manuscripts. The shelves required to house this massive amount of material measure 55 miles.

Perhaps the finest library in the world is the *Bibliothèque Nationale* in Paris. In the year 1943 an inventory disclosed that it had some 4,500,000 volumes, 122,000 manuscripts and 500,000 maps and plans contained in 28,000 volumes.

The *State Library* in Berlin, founded in 1661, had about 2,130,000 volumes and 56,810 manuscripts. The *State Library* at Munich, founded by Duke Albrecht V of Bavaria, had 1,670,000 books and some 50,000 manuscripts.

The *Nationalbibliothek* in Vienna has 1,250,000 volumes and 27,000 manuscripts as well as a collection of 100,000 priceless papyrus.

While not as large as some of the state libraries in other countries the *Biblioteca Vaticana* has many priceless old manuscripts bequeathed to the Vatican over the centuries. The printed books number about 600,000 volumes, the incunabula about 6,000 and the manuscripts about 50,000.

Two of the more important Italian libraries are the *Biblioteca Nazionale* at Naples which has about 1,000,000 volumes and 11,868 manuscripts; and the *Biblioteca Nazionale Centrale* at Florence which houses 2,000,000 volumes, manuscripts and pamphlets.

Other famed libraries in Europe are the *Bibliothèque Royale* at Amsterdam, 1,000,000 volumes; the *Biblioteca Nacional* at Madrid, 1,210,520 volumes; *Biblioteca Nacional* at Lisbon, 500,000 volumes and 150,000 manuscripts; and the *University Library* at Oslo, 850,000 volumes.

One of the largest libraries in the world is the *Gosudarstvennaya Publichnaya Biblioteka* at Leningrad (formerly the Imperial Public Library, at St. Petersburg); the state library of the U. S. S. R., it is said to contain 5,000,000 volumes, 240,000 manuscripts and autographs and has many collections of priceless historical documents.

The second largest library in the Soviet Union, the *Lenin Memorial Library* in Moscow has more than 3,900,000 printed volumes and many invaluable early printed books and manuscripts.

In the Far East, the most extensive libraries are found in Japan. The Imperial cabinet at Tokyo has some 507,600 volumes, consisting mostly of government documents.

The United States

The earliest libraries in the Colonial era were privately owned although in 1731 Benjamin Franklin projected the first subscription library in Philadelphia. Endowments helped to set up many of the large libraries, although many of these institutions are now receiving state or municipal support.

The largest library in the United States is the *Library of Congress*, established in 1880 by an act of Congress. In 1943, it contained 5,395,000 books and pamphlets, and ranked as the largest library in the world. While it extends its services for members of Congress and other government departments, it also offers excellent facilities for the serious scholar. It also performs the function of a national library by extending bibliographic and other services to all other libraries in the country.

The *New York Public Library*, with its 3,730,000 volumes, is the largest public library in the world. There are two important reference libraries in Chicago, the *Newberry* with about 450,000 volumes and the *John Crerar* with more than 820,000 volumes.

Other large public libraries are the Boston Public Library, 1,683,000 volumes; Cleveland Public Library, 1,920,000 volumes; Chicago Public Library, 1,565,000 volumes; Los Angeles Public Library, 1,491,000; Cincinnati Public Library, 1,130,000 and the Brooklyn Public Library, 1,108,000.

The growth of libraries attached to colleges and universities in the United States has been phenomenal and some of the university libraries are among the largest in the country. Among them are (total volumes in parentheses): Harvard University (4,702,000), Yale University (3,432,000), Columbia University (about 2,000,000), California University, including its eight schools (3,964,000), University of Chicago (1,500,000), Cornell University (1,187,000), University of Illinois (1,964,000), University of Michigan (1,240,000), University of Minnesota (1,327,000), University of Pennsylvania (1,013,000), Princeton University (1,000,000), Northwestern University (848,000), Brown University (723,000), Duke University (722,000), Johns Hopkins University (718,000), New York University (687,000), Ohio State University (644,000), Stanford University (920,000).

In Canada, the most important public library is that of Toronto, which has more than 400,000 volumes. Extensive libraries attached to the universities are Queen's University (211,000), McGill University (433,000), and Laval (760,000).

UNIVERSITIES

ANCIENT AND MODERN

Source: Encyclopaedia Britannica.

Universities, in the modern sense of the term, sprang up in the 12th and 13th centuries in response to the resurgence of learning that just preceded the Renaissance in Europe. Procedure at the early universities was informal, with students merely gathering at some place in a city to listen to a pre-eminent teacher lecture. There were no campuses, buildings or endowments. Actually, the term "university," meant at one time a guild or a corporation; there were, in the medieval period, "universities" of bootmakers, weavers, etc. Thus the university of learning was merely patterned along the same line as the guilds. The students filled the role of apprentices and the teachers were the masters.

At first, the universities were only locally renowned. Then as the teachers became known beyond national frontiers and the term university came to have a more definite and technical significance, the popes and kings granted the institutions charters giving them legal status and attending students were exempted from military

service and made independent of the jurisdiction of the townspeople.

The first European university was that of Salerno which had its origins in the 9th century when it was known as a school of medicine. In the 11th century, it became one of the most famous medical schools of Europe.

University of Bologna. Organized in 1158 by students as a means of protection against the merchants and citizens of Bologna who raised their prices of foodstuffs and lodgings, the University of Bologna was famous for its legal scholars. The students were organized into two guilds and exercised a great deal of authority in managing not only the administration of the university but the professors themselves and controlled all academic matters, save the granting of degrees.

Other Italian universities famed in the mediaeval era included those at Modena, Vicenza, Padua, Naples, Pavia, Arezzo, Perugia, Florence, Siena and Ferrara.

The University of Paris. This institution and its origin in a cathedral school on the Île de la Cité, but later moved to the left bank of the Seine, although still under the authority of the chancellor of Notre Dame. It was established sometime between 1150 and 1170, developed into the most famous continental center of learning in its day and became the model for Oxford and Cambridge universities. The three principal schools at Paris were theology, medicine and law. By the 14th century, the University of Paris had some 40 colleges of which the Sorbonne became the most celebrated.

The universities of Paris and Bologna had a marked influence in the subsequent creation of other university centers. About 1200 there was a migration of students from Paris to Oxford and a decade or two later, from Oxford to Cambridge.

Other famous universities of the Middle Ages include the *University of Toulouse* (1223), *Orleans* (1305), *Valladolid* (1346), *Salamanca* (1243), *Seville* (1254), *Coimbra* (1537), *Prague* (1347), *Krakow* (1364), *Munich* (1364), *Heidelberg* (1385), *Cologne* (1388), *Erfurt* (1379), *Budapest* (1475), *Paris* (1426), *Leipzig* (1409), *Rostock* (1419), *Freiburg* (1455) and *Tübingen* (1477).

The Renaissance

The Renaissance gave fresh impetus to the universities of Europe. Almost concurrent with the decline of feudalism was the rise of the universities. In France three new universities of importance arose in the 15th century—the *University of Aix* (in Provence); the *University of Poitiers* (1431), in which learning took on a more secularized and less Anglicized tone in conformity with the new spirit of rising nationalism; and the *University of Caen* (1437), founded under English auspices, but later becoming French after the expulsion of the English.

Other French institutions of note that rose in this era were at *Bordeaux* (1441), *Valence* (1452), *Nantes* (1463) and *Bourges* (1465); and new universities on the continent were founded at *Basel* (1460), *Ingolstadt* (1459), *Trier* (1450), *Mainz* (1476), *Uppsala* (1477), *Copenhagen* (1479), *Wittenberg* (1502) and *Frankfurt on the Oder* (1506).

St. Andrew, founded in 1411, was the first university in Scotland. Others were the *University of Glasgow* (1453), the *University of Aberdeen* (1494) and the *College of Edinburgh* (1582).

In Spain, new universities were *Valencia* (1501); *Seville* (1505); *Santiago* (1526); *Granada* (1531) and *Oviedo* (1574).

Reformation and Post-Reformation

Until the period of the Reformation, most of the institutions of higher learning

in Europe were under the tutelage of the Catholic Church. During this period many established universities declared their independence of the Roman Catholic Church. Cromwell's rule brought about new scholastic methods at both Oxford and Cambridge and the establishment of new colleges thoroughly imbued with Protestantism.

But the first Protestant university was that of *Marburg*, founded in 1527. Its land and buildings were made up of property confiscated from the religious orders in the Hessian capital. Other Protestant universities were: *Königsberg* (1544); *Jena* (1575); *Helmstedt* (1575); *Altdorf* (1575); *Giessen* (1607); *Strasbourg* (1621) and *Halle* (1693).

18th, 19th and 20th Century Universities

Among the more famous institutions in this era was *Göttingen* (1736) whose school of history became celebrated throughout Europe. Others were *Erlangen* (1743); *Berlin* (1809); *Bonn* (1818); *Helsingfors* (1826); *University of Lemberg* (Lwów), founded in 1816; the *National University at Athens* (1837); *Tokyo* (1868); *Kyoto* (1897); *Bucharest* (1864); *Sofia* (1888); *Constantinople* (or *Stamboul*) (1900).

Among the more famous British universities established in the 19th and 20th centuries are the *University of London* (1825); *Manchester* (1851); *Liverpool* (1881); *Leeds* (1904); the *Mason University College* at Birmingham (1900) and the *University College* at Sheffield (1905). The *University of Wales* is composed of colleges at Aberystwyth, Bangor, Cardiff and Swansea.

There are many important and large universities in the British dominions. In Canada, the most famous *McGill* in Montreal was founded in 1821. Others are *Laval University*, Quebec (1852); *Montreal University* (1876); the *University of Toronto* (1827) and *Queens University* at Kingston, Ont. (1841).

The early universities in India were patterned after London University rather than on the Oxford-Cambridge style, and were purely examining institutions. Calcutta and Madras universities were founded in 1857 as examining schools with no teaching functions. New universities were later established and by the Act of 1904, teaching functions were permitted in most Indian higher educational institutions.

In Australia, the state plays an important role in the development of universities. The *University of Melbourne* (1853) is the largest in point of numbers. Among the others are: *Adelaide* (1874); the *University of West Australia* (1913); the *University of Queensland* (1909) and the *University of Tasmania* (1890).

There are also numerous and well-endowed universities in New Zealand, South Africa, and other parts of the empire.

The university system in the Soviet Union was being spurred by the state planners. As of 1755, Russia had only three universities—*Moscow*, founded in 1755, *Vilna* (1578) and *Dorpat* (1632). Other institutions developed later were the *University of Kharkov* (1804); *Kazan* (1804); *St. Petersburg* (1819); *St. Wladimir in Kiev* (1832); *Odessa* (1865); *Warsaw* (now Polish) (1886) and *Tomsk* (in Siberia) (1888).

The building of universities after the Revolution of 1917 was spurred by the Soviet government. In 1933, official government sources said that there were 721 institutions of higher learning; these included universities, institutes and academies. Because of the need for developing the vast, unexploited industrial potential of the country, technical studies were stressed in the Soviet universities.

In China, the growth of universities was hampered by the chaotic state of the government in the 1900's, the recurring civil wars and the conflict with Japan. Prior to 1930, there were about 20 universities in the country as well as a number of other higher institutions of learning.

The United States

The university in the United States marches hand in hand with the progress of the nation. Although life for the early settlers in a primitive, unexplored and unexploited land was full of difficulties, they brought with them a heritage of European culture that they planted in New England soil. The first university in the country was started as *Harvard College* in 1636, with an endowment totaling £800. Three hundred and ten years later, Harvard was to become probably the most famous of the American universities with an endowment of more than \$156,000,000,

a faculty of 1,740 members and a student enrollment of more than 3,700.

The *College of William and Mary* (1793) was the second institution of higher learning established in the colonies. Others established during the colonial period (current names only) are: *Yale University* (1701); *Princeton* (1746); *Washington and Lee* (1749); *University of Pennsylvania* (1751); *Columbia* (1754); *Brown* (1774); *Rutgers College* (1766) and *Dartmouth College* (1770).

After the Revolution of 1776, the state tax-supported university was established. The *University of Virginia* (1825) was the most notable example of this type of institution. By 1894, all of the 48 states in the union, with the exception of Massachusetts, Rhode Island, Connecticut, Pennsylvania and New York, had state tax-supported institutions.

Meanwhile colleges for women grew up in the second quarter of the 19th century. Among these are: *Mt. Holyoke Seminary* (1837); *Elmira* (1853); *Vassar* (1865); *Wells* (1868); *Wellesley* (1871); *Smit* (1871); *Hunter* (1871) and *Bryn Mawr* (1881).

In the latter part of the 19th century universities established by virtue of private endowments grew up. Among these are: *Cornell* (1865), which is also a land grant institution; *Johns Hopkins* (1874); *Leland Stanford, Jr. University* (1885) and the *University of Chicago* (1890).

Although an outgrowth of the British universities, the American universities developed into institutions with no counterpart in Europe. The college course of study is four years and is crowned by a bachelor's degree in whatever particular field the student elects to specialize. The traditional bachelor's degree is the bachelor of arts. The next highest degree is the master's degree and crowning honor of them all is the doctorate. American universities frequently confer honorary degrees upon visiting dignitaries.

ZOOLOGICAL GARDENS

Source: Encyclopaedia Britannica.

Far from being a new idea, the custom of keeping savage beasts in captivity is almost as ancient as recorded history. In the early part of 1200 B. C., the Chinese king Wen had a special zoo where he housed animals captured from all parts of ancient China. In the Egypt of the Pharaohs, menageries were kept as adjuncts to the temples and the Empress Hatasu even sent out expeditions to "bring back alive" dogs, monkeys, leopards and giraffes for her own private zoo. Some of

the reigning monarchs of biblical days kept animals. Monkeys and peacocks were King Solomon's pets; lions were kept in captivity by Nebuchadnezzar.

In ancient Greece, many of the prominent citizens collected birds and mammals; the Romans went in for mass capture of scores of lions, leopards and tigers for use in their gladiatorial battles. Octavius Augustus was the Ringling of his day; this monarch, whose hobby was natural history, maintained in 29 B. C.,

st menagerie of tigers, lions and African animals.

Zoos fell into disrepute after the decline of the savage Roman games; it was not until the mediaeval days that zoological gardens were restored, sometimes as private menageries maintained by wealthy nobles, sometimes as civic institutions. The royal menagerie was established by Henry I (1100-85) of England at Woodstock, laying the foundation for the famous *Regent's Park Zoological Garden* in London.

Other rulers also had their zoos. Pope Sixtus V had his own private menagerie in the Vatican and Louis XIV spent substantial sums for the upkeep of his menagerie at Versailles.

One of the earliest zoos, the *Jardin des Plantes* in Paris, was established in 1793. In the following century zoological gardens were established in many of the major cities of the world.

At *Gizeh, Cairo*, the zoological garden is enclosed in a beautiful park, maintained by the government. Its large collection of animals is chiefly African in origin. Elsewhere in Africa, at Khartoum, in the Sudan, at Pretoria and at Johannesburg, fine specimens are found in municipal and state-supported zoological gardens.

North America has more than 30 zoos scattered in the United States, Canada and Mexico. The Quebec Zoological Society's collection is made up of Canadian species; Toronto has in addition many exotic species.

The first zoological garden in the United States was established in Philadelphia in 1827. Since that time nearly every large city in the country has acquired a zoo. Among the large zoos in the country are the celebrated Bronx Zoo and the Central Park in New York—and those in St. Louis, Detroit, Kansas City, Chicago—one in Lincoln Park, another magnificent display at Brookfield—and San Diego. The United States National Zoological Park in Washington, in a beautiful setting of hills, woods and stream, was established in 1890 by an act of Congress. Some of the U. S. zoos exhibit their collections in open-air, barless pits; the Brookfield zoo in Chicago follows this pattern.

Extensive collections in South America are found in Buenos Aires, at Concepción and Santiago in Chile and a zoological-botanical garden at Belém, Pará, Brazil, noteworthy for its specimens of Amazonian birds and animals.

In Asia important collections were established by the governments and by native princes. Largest in India is the zoo at Alipore, Calcutta; other excellent zoos are located at Bombay, Karachi and on private estates. Singapore, Batavia, and Surabaya

have their own important collections. Others are found at Fort de Kock on Sumatra's west coast; and at Johore Bahru on the property of the crown prince. Japan abounds in large and small zoos and privately owned aviaries, located in Tokyo, Nagoya, Kyoto, Osaka and Kobe.

Sydney, Melbourne, Adelaide and Perth have large zoological gardens; smaller zoos in Australia are found at Brisbane and Wellington. The Auckland, New Zealand, collection has a representative group of native fauna.

In Europe, zoological gardens have long been popular public institutions. One of the oldest in France is the *Paris Jardin des Plantes* established in connection with the museum of natural history. It has had constant improvements and a vivarium for smaller creatures was added in recent years. The *Jardin d'Acclimatation*, in the Bois de Boulogne, was established in 1858 and a model zoo at Vincennes was added in 1937 for the Paris Exposition.

The terraced zoo at Zurich and one in Basel are the only two located in Switzerland.

Germany, on the other hand, has about 20 zoological gardens, many of which were developed in the peacetime years between World Wars I and II. Large zoos are located in Berlin and Frankfurt on the Main and at Munich, where the animals are grouped according to the continent of their origin. Others are at Dresden, Leipzig and Cologne. At Stellingen, the *Hagenbeck Garden* became an outstanding show place and distributing center for animals. Smaller collections are found at Düsseldorf, Elberfeld and Hanover. The *Schönbrunn* at Vienna, is one of the oldest zoos in Europe. The *Budapest Zoological Gardens* house a fine collection of European birds. At Antwerp the *Royal Zoological Society* founded a large menagerie in 1843. In England, the outstanding collection, though small, is in the garden of the *London Zoological Society* in Regent's Park. Manchester and Clifton have smaller gardens and the one at Edinburgh is famous for its collection of penguins. The *Dublin Zoo* is noted for its lions, many of which were born there. The *Amsterdam Zoo*, with its East Indies collection and its aquarium, and the *Rotterdam Gardens* are the two best known in the Netherlands. Built on a high elevation the *Skansen Zoo* in Stockholm, exhibits north European specimens. The most important gardens in the U. S. S. R. are found in Moscow where north European as well as exotic species are collected. Some are confined to small enclosures and the herds are segregated in large paddocks. The zoo at Rome has part of its collection confined in barless pits. At Lisbon there is a small zoological garden and in Madrid only part of the original royal menagerie exists.

FAMOUS STRUCTURES

Source: Encyclopaedia Britannica.

The Pyramids of Egypt. Ranked among the oldest monuments in the world, these triangular-shaped crypts, constructed of huge stone blocks, were burial places for the pharaohs. They were built in the epoch of the Ancient Empire (5000 to 3000 B. C.) near Gizeh, Egypt. The three most famous pyramids are Khufu (also known as Cheops) which is more than 480 feet in height and 760 feet at the base, with a 50 degree slope; the other two are Khafra (Cephren) and Menkaura (Mycerinus). Khafra is 471 feet high and Menkaura, the smallest, has an altitude of 215 feet. In construction of the largest pyramid, King Khufu employed 7,000,000 men at forced labor for 30 years.

The Great Sphinx of Egypt. Another wonder of ancient Egyptian architecture is the great Sphinx which has a length of 189 ft. The Sphinx, used as a temple, was built in the 4th dynasty.

Other Egyptian buildings of note include the *Temples of Karnak and Edjou* and the *Tomb of Beni-Hassan*.

The Parthenon of Greece. Built on the Acropolis in Athens, the Parthenon was the chief temple to the goddess Athena. It was believed to have been completed by 438 B. C. The present temple remained intact until the 5th century A. D. Today the Parthenon consists of ruins, whose majestic proportions nevertheless are discernible. It is still regarded as a miracle of architectural perfection, and one of the truly great and beautiful buildings of the world.

Other great structures of ancient Greece were the *Temples at Paestum* (about 540 B. C.); the *Temple of Poseidon* (about 460 B. C.); the *Temple of Apollo at Corinth* (540 B. C.); the *Temple of Zeus at Olympia* (about 465-457 B. C.); *Temple of Apollo at Bassae* (about 450-420 B. C.); the famous *Erechtheum* atop the Acropolis (about 421-405 B. C.); the *Temple of Athena Niké at Athens* (about 426 B. C.); the *Olympieum at Athens* (174 B. C.-131 A. D.); the *Athenian Treasury at Delphi* (about 515 B. C.); the *Propylaea of the Acropolis at Athens* (437-432 B. C.); the great *Altar of Zeus at Pergamum* (197-159 B. C.); the *Theatre of Dionysius at Athens* (350-325 B. C.); the "House of Cleopatra" at Delos (138 B. C.) and the *Theatre at Epidaurus* (325 B. C.).

The Colosseum of Rome. Largest and most famous of the Roman amphitheaters was the Colosseum of Rome which was opened for use in 80 A. D. Elliptical in shape, it consisted of three stories and an upper gallery, all built of stone. Its seats rise in tiers, one above the other; the tiers in turn are buttressed by concrete vaults

and stone piers. It could seat between 40,000 and 50,000 spectators. The Colosseum was principally used as an arena for gladiatorial combat.

The Pantheon at Rome. Begun by Agrippa in 27 B. C. as a temple, it was rebuilt by Hadrian (120-124 A. D.). Literally the Pantheon was intended as a temple of "all the gods." It is remarkable for its perfect preservation today and it has served continuously for almost 20 centuries as a place of worship. Its construction is brick and a hole cut in the dome provides the light.

Other famous Roman buildings include the *Arch of Constantine* (315 A. D.); the *Arch of Titus* (82 A. D.); the *Temple of Vesta* in the Forum; *Hadrian's Villa at Tivoli* and the *House of the Vestal Virgins*.

St. Mark's Cathedral in Venice (1063-1067), one of the great examples of Byzantine architecture, was begun in the 9th century. Partly destroyed by fire in 976, it was later rebuilt as a Byzantine edifice. St. Mark's square has five large arches over the central arch are the celebrated bronze horses. Covered entirely with richly multicolored marble, the cathedral's exterior and interior is rich with mosaic work in porphyry and gold. Because of both the magnificent pigmentation of its marble and mosaics, the church is more famous for its color than for its architecture.

Other famous Byzantine examples of architecture are *St. Sophia* in Constantinople (532-537 A. D.); *San Vitale in Ravenna* (542); *St. Paul's Outside the Walls* in Rome (5th century); the *Kremlin church in Moscow* (begun in 1397); *St. Lorenzo Outside the Walls, Rome*, begun in 588.

The Cathedral Group at Pisa (1067-1173), one of the most celebrated groups of structures built in Romanesque style, consists of the cathedral, the cathedral's baptistery, Campo Santo, and the Leaning Tower. This trio of edifices form a group by themselves in the northwest corner of town. The cathedral and baptistery are built in black and white marble. The campanile (the Leaning Tower) is of white marble, and its height is 179 ft. It leans more than 16 feet out of the perpendicular. There is little reason to believe that the architects intended to have the tower lean.

Other examples of Romanesque architecture include the *Vezelay Abbey* in France (1130); the *Church of Notre Dame-du-Port* at Clermont-Ferrand in France; the *Church of San Zeno* (begun in 1138) at Verona; the *Durham Cathedral* in England and the *Church of the Apostles* at Cologne, Germany (1220).

The Alhambra (1248-1354). Located in Granada, Spain, the Alhambra is unique

ally esteemed as one of the great masterpieces of Mohammedan architecture. Designed as a palace and fortress for the Moorish monarchs of Granada, it is surrounded by a heavily fortified wall more than a mile in perimeter. The location of the Alhambra in the Sierra Nevada Mountains provides a magnificent setting for this jewel of Moorish Spain. The ornamentation of the palace, built in red brick, provides a great part of its glory. Minute and beautiful mosaic patterns are interwoven in a richly-hued framework of crimson, blue, ebony and gold. The most outstanding parts of the Alhambra are the Court of the Lions, the Gate of Justice, the Court of Alberca, the Tower of Carries, the Hall of Ambassadors, the Hall of Justice and the Court of Myrtles.

The Taj Mahal (1632-1650), at Agra, India, built by Shah Jehan as a tomb for his wife, is considered by some as the most perfect example of the Mongol style and by others as the most beautiful building in the world. Four slim white minarets surround the square building which is topped by a white dome; the entire structure is made of marble. Arabesques and passages from the Koran in inlays of precious stones, such as agates, bloodstones, jasper, cover the magnificent exterior. Built of pure white marble, the Taj Mahal stands on a vast white terrace.

Other famed Mohammedan edifices are the *Mosque of Omar*, Jerusalem (691 A.D.); the *Citadel* (1166), and the *Tombs of the Mamelukes*, completed in the 15th century, in Cairo; the *Tomb of Humayun* in Delhi; the *Blue Mosque* at Tabriz and the *Tamerlane Mausoleum* at Samarkand.

Notre Dame de Paris (begun in 1163), one of the great examples of Gothic architecture, is a twin-towered church with a people over the crossing and immense flying buttresses supporting the masonry at the rear of the church. It is noted for the grandeur of its gray-stone vaulted interior, the sweep of its pointed arches and the beauty of its stained glass windows.

Other famed Gothic structures are *Westminster Abbey*, London (begun in 1066); *Chartres Cathedral* (12th century); *Sainte Chapelle* (1246-48) Paris; *Laon Cathedral*, France (1160-1205); *Rheims Cathedral* (1210-50); *Rouen Cathedral* (13th-16th centuries); *Amiens Cathedral* (1218-1269); *Le Mans Cathedral*; *Salisbury Cathedral* (1220-1260); *York Minster* or the *Cathedral of St. Peter* begun in the 7th century; *Cologne Cathedral* (13th-19th centuries) was badly damaged in World War II; and *Giotto's Tower*, Florence, Italy (begun in 1334).

The *Duomo Church* in Florence, was founded in 1298, completed by Brunelleschi and consecrated in 1436. The Duomo is virtually all dome. As designed by Bru-

nelleschi, the oval-shaped dome dominates the entire structure. Octagonal in form, the dome has eight larger ribs running from the lantern at the top to the circular balustrade at the base. Light filtering through the painted windows throws a mellow glow on the church's noble interior.

Other examples of Renaissance architecture are the *Palazzo Vecchio*, the *Palazzo Pitti* and the *Palazzo Bargello* in Florence; *St. Peter's* in Rome (begun in 1506 and consecrated in 1626); the *Palace of the Doges* (1550) in Venice; the *Farnese Palace* in Rome, completed by Michelangelo; *Palazzo Grimani* (completed 1550) in Venice; the *Escorial* (1563-93) near Madrid; the *Town Hall* of Seville (1527-32); the *Louvre*, Paris; the *Chateau at Blois*, France; *St. Paul's Cathedral*, London (1675-1710); the *École Militaire*, Paris (1752); the *Pazzi Chapel*, Florence, designed by Brunelleschi (1429); the *Palaces of Versailles* and of *Fontainebleau* and the *Chateau Chambord* in France.

Few innovations in architecture were introduced in the 18th and 19th centuries. Italian designers, perpetuating the style of preceding centuries, suffered in addition from the restraining influence of other countries. However, outstanding buildings during this era are the *La Superga* at Turin, the *Hotel-Dieu* in Lyon, the *St. Genevieve Church* in Paris, the *St. Karl Borromäus Church* in Vienna, the *Belvedere Palace* at Vienna, the *Royal Palace* of Stockholm, the *Opera House* of Paris (1863-75); the *Bank of England*, the *British Museum*, the *University of London* and the houses of parliament, all in London; the *New Museum* and the *Court Theatre* in Berlin; the parliament house in Vienna; the *Pantheon*, the *Church of the Madeleine*, the *Bourse* and the *Palais de Justice* in Paris; and the *Dresden Theater*.

United States Buildings

Rockefeller Center, New York City, completed in 1940, consists of a remarkable group of notable examples of the new skyscraper architecture in America. It is dominated by the 70-story R. C. A. building in the center. There are 14 separate buildings and the five edifices of the western section of the center are known as Radio City. The buildings are constructed of stone and the architecture is severe and simple; long fluted lines running from top to base dominate the architectural theme.

Empire State Building, New York City. The loftiest building in the world, the Empire State has 102 stories, is 1,250 feet high. Its architecture is not exceptional.

Other famous examples of modern buildings in the United States are the *Chrysler Building*, the *Woolworth Building* in New York; the *Merchandise Building*, the 333

Building, Civic Opera House in Chicago; and the Pentagon in Washington.

Oriental Architecture

Notable examples of Indian architecture are the temples at Benares, and at Kall Katraha and the Pagoda in Tanjore.

Angkor Vat, outside the city of Angkor Thom, Cambodia, is one of the most beautiful examples of Cambodian architecture. The sanctuary was built during the 12th century. Its temple court, protected by a broad moat, has two square cloisters and a central tower connected by galleries which are decorated with celebrated reliefs depicting heroic epics, scenes from the contemporary royal court and the priesthood and army.

Great Wall of China (228 B. C.?). While designed specifically as a defense arrangement against nomadic tribes, the Great

Wall has scores of large watch towers which could be called buildings. It was erected by Emperor Ch'in Shih Huang T and is 1,400 miles long. Built mainly of earth and stone, it varies in height between 18 and 30 feet.

Typical expressions of Chinese architecture are the pagodas or temple towers. Among some of the better known pagodas are the *Great Pagoda of the Wild Geese* at Sian (founded in 1652); the 11th century *Nan t'a* at Fang Shan; the *Pagoda of Sung Yeh Ssu* (523 A. D.) at Sung Shan Honan.

Other well-known buildings are the *Drum Tower* in Peking (1273), the *Three Great Halls* in the Purple Forbidden City Peking (1627). *Buddha's Perfumed Tower* a 19th century edifice, at Peking, the *Porcelain Pagoda* in Peking and the *Summer Palace* at Peking.

Great Disasters

Earthquakes and Volcanic Eruptions

- 79 A.D. ITALY: eruption of Mt. Vesuvius buried cities of Pompeii and Herculaneum, killing thousands.
- 1626 July 30, ITALY: 70,000 killed and 30 towns destroyed in earthquake centering near Naples.
- 1731 Nov. 30, CHINA: capital of Peking destroyed by earthquake, about 100,000 casualties.
- 1794 Feb. 4, ECUADOR: 40,000 buried alive in earthquake that demolished Quito and Cuzco.
- 1855 Nov. 11, JAPAN: 30,000 killed by earthquake at Jeddo.
- 1883 May 20, NETHERLANDS EAST INDIES: eruption of Krakatao occurred, violent explosions Aug. 26; two-thirds of island destroyed. Tidal waves of 115 feet; estimated 36,000 dead.
- 1902 May 8, WEST INDIES: Martinique Island, Mt. Pelée erupted and wiped out city of St. Pierre and entire population of 28,000.
- 1906 April 18, SAN FRANCISCO: earthquake accompanied by fire that raged over 7,000 square blocks; 1,000 died; property damage about 250 millions.
- 1923 Sept. 1, JAPAN: earthquake destroyed seven-tenths of Tokyo and most of Yokohama. 99,331 dead 103,733 injured and 43,000 missing.
- 1935 May 31, INDIA: earthquake at Quetta killed about 60,000.
- 1939 Dec. 27, NORTHERN TURKEY: several quakes in eastern and northern Anatolia destroyed city of Erzincan about 100,000 casualties.

Floods and Tidal Waves

WORLD

- 3246 or 2104 B. C. ASIA MINOR: The Deluge (Bible), flood continued for forty days, waters remained 150 days.
- 1228 A.D. HOLLAND: 100,000 drowned by sea flood in Friesland section.
- 1642 CHINA: rebels besieging Kaifeng destroyed seawall, causing flood that drowned 300,000 inhabitants.
- 1887 CHINA: millions of lives reputedly lost in Honan province by the overflowing of Hwang-ho River.
- 1896 JAPAN: tidal wave following an earthquake killed 27,000.
- 1937 INDIA: Hooghly River flood, and storm in Bay of Bengal with huge tidal wave killed 300,000.
- 1939 CHINA: floods in north; ten million homeless, starved or drowned.
- 1941 INDIA: Ganges Delta, 5,000 drowned in violent rainstorms in Barisal.

UNITED STATES

- 1856 MISSISSIPPI: cyclone-whipped waves drowned 400 attending a ball at Lake Isle in mouth of Mississippi River.
- 1889 PENNSYLVANIA: 2,142 lost in Johnstown flood.
- 1912 MISSISSIPPI: Mississippi River and tributaries overflowed causing 3 million property damage and 21 deaths.
- 1913 OHIO: floods by Ohio and Indiana rivers took 730 lives and caused 15 million property damage.
- 1927 May, MISSISSIPPI: floods in Mississippi Valley inundated 20,000 square miles and left 700,000 homeless.
- 1937 MISSISSIPPI: floods in the Allegheny, Mississippi and Ohio valleys caused 900 deaths.
- 1941 MISSOURI: half a million acres flooded in Nebraska-Missouri area caused 13 million damages.

Tornadoes, Typhoons and Hurricanes

WORLD

- 1864 Oct. 5, INDIA: most of Calcutta denuded by cyclone killed 70,000.
- 1876 Oct. 31, INDIA: cyclone and tidal wave swept 3,000 square miles with Bengal worst hit; 215,000 killed.
- 1881 Oct. 8, CHINA: typhoon at Halfong killed estimated 300,000.
- 1882 June 6, INDIA: cyclone and tidal wave killed 100,000 in Bombay.
- 1903 Jan. 13, PACIFIC ISLANDS: hurricane at Hao and Marakou killed between 800 and 1,000.
- 1906 CHINA: typhoon at Hong Kong killed about 10,000.
- 1930 Sept. 3, SANTO DOMINGO: hurricane killed about 2,000 and injured 6,000.
- 1934 Sept. 21, JAPAN: hurricane killed 232 at Honshu.
- 1935 Oct. 25, HAITI: hurricane and flood ravaged Jérémie and Jacmel districts; 2,000 killed.
- 1942 Oct. 16, INDIA: cyclone devastated Bengal; about 40,000 lives lost.

UNITED STATES

- 75 Sept. 15 to 18, TEXAS: hurricane at Galveston swept away houses, villages and caused great loss of life.
- 84 Feb. 18, SOUTHERN STATES: tornadoes took about 700 lives.
- 86 Oct. 12, TEXAS: violent gales caused flood resulting in 250 dead.
- 93 Aug. 27, SEA ISLAND: off North Carolina and Georgia; about 900 killed.
- 00 Sept. 8, TEXAS: Galveston struck by hurricane and tidal wave; 5,000 dead and 17 million damage.
- 25 Mar. 18, MIDWEST: about 800 killed and 13,000 injured in tornado which hit Ill., Ind., Tenn., Ky., and Mo.; 15,000 homeless, 35 towns destroyed.
- 1926 Sept. 18, FLORIDA: hurricane which hit Florida's East Coast took 373 lives, left 40,000 homeless and caused property damage of \$165,000,000.
- 1928 Sept. 12, FLORIDA: hurricane from Windward Island killed 4,000.
- 1936 April 2, MISSISSIPPI and GEORGIA: Tupelo, Miss., and Gainesville, Ga., centers of tornadoes which swept southern states; 402 killed; 1,853 injured.
- 1945 Sept. 15, SOUTHERN U. S. AND BAHAMAS: terrific windstorm reaching 143-mile gale destroyed three hangars, 25 patrol blimps, 366 aircraft at Richmond, Fla., damage about 50 million.

Fires

WORLD

- A. D. ITALY: Rome burned for eight days, most of city destroyed.
- 75 Sept. 2, ENGLAND: "Great Fire of London" destroyed 13,200 houses, St. Paul's Church, 86 parish churches, etc. Damages about 10 million pounds.
- 90 SWEDEN: over 1,000 houses burned down at Karlskrona.
- 12 RUSSIA: fire started by Russians in Moscow to prevent Napoleon from occupying city destroyed 30,800 houses.
- 71 FRANCE: city of Paris fire started during fighting in "Paris Commune" caused about 170 million damage.
- 81 Dec. 8, AUSTRIA: about 850 died in Ring Theater fire in Vienna.
- 17 Dec. 6, CANADA: between 1,500 and 1,800 killed in explosion and fire when *Mont Blanc* (ammunition ship) collided with the *Imo*; 25,000 homeless, 20 million damage.
- 22 ASIA MINOR: Smyrna almost destroyed on eve Turkish occupation, great loss of life, 100,000 homeless, about 200 million damage.
- 24 CHINA: Canton burned during the civil war; 20 million damage.
- 44 April 14, INDIA: ship fire that spread to ammunition depot killed 128 in Bombay.

UNITED STATES

- 1835 NEW YORK CITY: 530 buildings burned down by fire over 52 acres, causing 15 million damage.
- 1851 ST. LOUIS: 2,500 buildings leveled by fire which destroyed three-fourths of city, 11 million damage.
- 1871 Oct. 8, CHICAGO: the "Chicago Fire" which started in barn, swept 2,124 acres, burned 17,450 buildings, killed 250 persons and made 98,500 homeless; 196 million damage.
- 1872 Nov. 9, BOSTON: burned 65 acres, destroyed 776 buildings; 75 million damage.
- 1900 June 30, HOBOKEN, N. J.: destroyed docks and piers, damaged ocean liners and killed about 200.
- 1934 CHICAGO: Union Stock Yards destroyed, thousands homeless, 10 million damage.
- 1937 Mar. 18, NEW LONDON, TEXAS: natural gas explosion destroyed schoolhouse; 413 children and 14 teachers killed.
- 1942 Nov. 28, BOSTON: Cocoonut Grove night club fire burned 493 to death.
- 1944 July 17, PORT CHICAGO, CALIF.: 321 killed in explosion of two ammunition ships.
- 1946 June 5, CHICAGO: La Salle Hotel fire killed at least 60.

The Great Fire of England

On September 2, 1666, in a wooden house on Pudding Lane in the City of London, from small hearthstone spark a conflagration began that swept over London and burned for three days and nights. It destroyed all the buildings of 436 acres, 400 streets, 13,200 houses, 86 parish churches, St. Paul's Church, 6 chapels, the Guild Hall, the Royal Exchange, many hospitals, libraries and four large prisons. The total property loss was estimated at £10,730,500, or approximately fifty million dollars. Only six lives were lost.

Shipwrecks

WORLD

- 1833 May 11, *LADY OF THE LAKE*: bound from England to Quebec struck iceberg; 215 perished.
- 1853 Sept. 29, *ANNIE JANE*: emigrant vessel off coast of Scotland, 348 passengers and crewmen died.
- 1912 Mar. 5, *PRINCIPE DE ASTURIAS*: Spanish steamer struck rock of Sebastien Pt.; 500 drowned.
- 1914 May 29, *EMPRESS OF IRELAND*: sank after collision with Danish collier in St. Lawrence River; 1,024 perished.
- 1916 Feb. 26, *PROVENCE*: French auxiliary cruiser; only 870 survived out of 4,000 passengers and crew.
- 1928 Nov. 12, *VESTRIS*: British steamer sunk in gale off Virginia coast; 110 perished.
- 1931 June 14, *FRENCH EXCURSION STEAMER*: overturned in gale off St. Nazaire; approximately 450 died.
- 1939 June 1, *SUBMARINE Thetis*: sank in Liverpool Bay, Eng.; 99 perished, four escaped.
- 1942 Oct. 2, *QUEEN MARY*: rammed and sunk a British cruiser; 338 aboard the cruiser died.

UNITED STATES

- 1865 April 27, *STEAMBOAT Sultana*: boiler explosion on Mississippi near Memphis; 1,450 killed.
- 1898 Feb. 15, U. S. *BATTLESHIP Maine*: 2 officers and men blown up in Havana Harbor.
- 1904 June 15, *GENERAL SLOCUM*: excursion steamer burned in New York Harbor; 1,021 women and children perished.
- 1912 Apr. 15, *TITANIC*: sunk after collision with iceberg; 1,513 died.
- 1915 May 7, *LUSITANIA*: torpedoed by German boat in Atlantic Ocean; 1,198 died.
- 1915 July 24, *EASTLAND*: Great Lakes excursion steamer overturned in Chicago River; 812 died.
- 1934 Sept. 8, *MORRO CASTLE*: about 100 killed in fire off Asbury Park, N. J.
- 1939 May 23, *SUBMARINE Squalus*: sunk with 59 men off Hampton Beach, N. H.; 33 of the crew were rescued.
- 1943 June 6, *AMMUNITION SHIP*: collided with oil tanker off Norfolk, Va.; 3 died.
- 1945 April 9, U. S. *SHIP*: loaded with aerobombs exploded at Bari, Italy; 30 killed.

Airplane Accidents

- 1921 Aug. 24, ENGLAND: ZR-2, British dirigible broke in two on trial trip near Hull; 62 died.
- 1928 May 25, ARCTIC AREA: dirigible *Italia*, piloted by Gen. Nobile of Italy, crashed near Fayen Island north of Spitsbergen, killing eight.
- 1930 Oct. 5, FRANCE: British dirigible, R-101, crashed over Beauvais in flames, 47 died, including Lord Thomson.
- 1935 May 18, SOVIET UNION: stunt flier crashed into giant land plane, the *Maxim Gorky*; 49 killed.
- 1938 July 24, COLOMBIA: military plane crashed into grandstand at air review at Bogota, killing 53.
- 1939 ECUADOR: military plane crashed in Guayaquil street, killing 25.
- 1942 Aug. 25, SCOTLAND: Duke of Kent and all aboard killed in crash of flying boat.
- 1943 Jan. 15, DUTCH GUIANA: all 35 aboard, including Eric Knight, novelist, killed in jungle crash of transport plane near Paramaribo.
- 1943 May 3, ICELAND: Lt. Gen. Frank M. Andrews and Bishop Adna W. Leonard among 14 killed in plane crash.
- 1943 July 4, GIBRALTAR: Premier Wladyslaw Sikorski of Poland and 15 others killed in plane crash.
- 1925 Sept. 3, CALDWELL, OHIO: ZR-1 U. S. S. *Shenandoah* broke in three parts killing 14.
- 1933 April 4, NEW JERSEY COAST: U. S. dirigible Akron crashed into sea, 3 died.
- 1936 Jan. 1, GOODWIN, ARK.: 17 died in crash of airliner.
- 1937 May 6, LAKEHURST, N. J.: zeppelin *Hindenburg* destroyed by fire while tower mooring. 56 aboard died.
- 1940 Aug. 31, LOVETTSTOWN, VA.: commercial liner crashed, all 25 aboard died.
- 1941 Feb. 27, ATLANTA, GA.: seven killed in crash of airliner; Capt. Ed Rickenbacker survived.
- 1943 May 20, CHICAGO: army bomber crashed into gas storage tanks, set fire to 18 million cu. ft. and killed 12 occupants of plane.
- 1943 July 28, BOWLING GREEN, Ky.: airliner crash killed 20 aboard.
- 1944 July 27, SCOTTISH COAST: U. S. hospital transport plane crashed; 3 died.
- 1946 Oct. 3, NEWFOUNDLAND: U. S. transatlantic airliner enroute to Bermuda crashed near Stephenville; all aboard killed.

TRAVEL GUIDE

Prepared by

THE AMERICAN EXPRESS
WORLD TRAVEL SERVICE

With the world disrupted for many years, information for the following guide was obtained under pressing circumstances. Once-famous hotels have been destroyed, monetary systems have undergone changes, and some air and steamship lines are still in a state of reconversion. American Express has strived, nevertheless, to present as accurate a guide as possible under such exigencies.

FOREWORD

There are three types of travel arrangements:

(a) Securing reservations, hotel accommodations, and transportation tickets alone, then making independent sight-seeing trips and other arrangements. (b) Having a travel organization obtain transportation tickets and hotel reservations, then touring privately in the country of destination. (c) Taking an escorted tour, including all details such as tickets, meals, hotel accommodations, transportation, and sight-seeing. Regardless of arrangement, the prime requisites for foreign travel are a passport and visa.

U.S. passport fee is \$10. Fees for a visa, issued by the country into which travel is intended, vary from \$1.00 to \$5.00. Two photographs are required for a passport and two, generally, for a visa. When exceptions to this exist, notation has been made under "Entry Requirements" of the country concerned. Some visas are merely rubber stamps on the passport, others are separate documents.

A tourist card is a permit for travel issued by Mexico, Cuba, Guatemala, and certain other countries. It is sometimes all that is required for entry and thus takes the place of a visa and sometimes of both visa and passport.

Where passports and visa are not required, it is advisable to carry a photostatic copy of birth certificate as proof of American citizenship plus personal identification.

Some countries, particularly in South America, require certificates of health, good conduct, and vaccination before granting a visa.

In the travel guide, airlines serving each country are listed. Points reached directly from the United States are given in parentheses.

Baggage allowance on planes is sixty-six pounds to Europe and the Orient, fifty-five pounds to Mexico, Central and South America with 1 percent of the one-way fare charged for each 2.2 lbs. additional.

Ports of call for steamships are listed followed by the lines that make these points and, in parentheses, the flag under which ships of this line generally sail.

On steamships a reasonable amount of hand luggage is allowed. Steamer trunks are usually charged for at a rate of \$2.00 for the first and \$3.00 for each additional, with five trunks as the limit carried. Passengers may ship automobiles under 3500 lb. to Europe for approximately \$350. For heavier cars the charge is around \$400. A small amount of marine insurance is often required, usually amounting to less than \$5.

Travelers may take cameras, small amounts of cigarettes (approximately 100), whisky (one bottle) into foreign countries duty free. Some countries require a camera permit, issued without charge on arrival.

Upon returning to the United States, tourists may bring in \$100 worth of merchandise duty free if not for resale or commercial use. Liquor, however, is limited to one gallon and cigars to 300.

Since hotel accommodations are often difficult to obtain abroad, travelers should obtain confirmed reservations through American Express Company offices and agencies. Tourists should further protect personal funds by carrying American Express Travelers Cheques.

Under the various countries, typical celebrations as well as events of international interest have been listed. The unit of currency and coins used are described.

Acclimatization is an important factor in traveling and sudden weather changes necessitate limitation of activities at first, particularly in extremely warm climates. Hats are absolutely necessary in Torrid zones to avoid sunstroke.

Particular attention should be paid to daily extremes in heat and cold in order to plan suitable clothing. Climatic conditions and the best traveling time are given for each country.

In all South and Central American countries, the Orient, and equatorial Africa, only cooked food should be eaten.

All travelers in foreign countries may use American Express offices as meeting places, mail addresses, information centers, and for obtaining interpreters.

TRAVEL GUIDE

Light—20" to 40" Heavy—60" to 80"
Extremely heavy—Above 80"

NORTH AMERICA

Alaska

With Arctic waters on the north and east, and north Pacific waters along the west southeastward, there are great variations in temperature and precipitation. Climate in the Aleutians is oceanic, moderate, with fairly uniform temperatures, considerable rain and almost continual fogs. Summers are cooler than along the coast to the east and south, winters are milder with less snow and the temperature never drops to zero; rain in summer and snow in winter are heavy. In the interior, rain and snow are comparatively light, except in the high ranges, but temperatures are low, often dropping to 50 or 60 below zero. Summers are short, hot. While Nome receives only 16 inches of yearly rain, Ketchikan, along the coastal strip next to British Columbia, has 162 inches of annual rain. In July and August, Nome's warmest months, the average daily high is about 60.

Ketchikan, during the same months, averages about 60 as a daily high. The daily high at Juneau from June to August averages about 63 and during its coldest month, January, the daily high averages 60. Best traveling time: June, July, August.

Monetary unit: U. S. currency.

Principal cities: Anchorage, Fairbanks, Juneau, Ketchikan, Nome, Sitka.

Entry requirements: None for U. S. citizens.

Airlines: PAA (Fairbanks, Juneau, Ketchikan, Nome), Northwest Airlines (Anchorage).

Steamships: To Juneau, Ketchikan: Alaska Steamship Co. (Amer), Canadian Pacific Alaska Service (Brit), Northland Transportation Co. (Amer). To Sitka: Northland Transportation Co.

Hotels: Anchorage: Anchorage, Westward. Fairbanks: Nordale. Juneau: Barclay, Gastineau. Ketchikan: Ingersoll, Edman. Nome: Patterson, Wallace.

American national holidays are observed.

Canada

Broadly speaking, the annual temperature along the Arctic Circle is about 55 and south of the Gulf of Saint Lawrence the annual mean is 40, with summer months averaging about 60, and receiving 40 to 56 inches of yearly rain and light snow. Twenty to forty inches of rain fall yearly in Quebec and northern Ontario, and snows cover the ground from the beginning of December until the end of March. Winters are cold, summers average 60 to 65, but the skies are clear, the air bracing. Montreal averages a daily high of 73 in July, its warmest month. Winter storms sweep north of southern Ontario, bringing rain in the south and causing a variable winter; summers are at a 65 average and have occasional temperatures of 90. Precipitation diminishes westward, most rain falling from May to August. Snowfall is lighter than northern Ontario and Quebec, and winter temperatures are lower. The prairie provinces have short, warm summers and long, cold winters but there is much sunshine during both periods. In southern Alberta, the winters are often warmed by westerly winds, called Chinooks, which can raise the temperature in a few hours from 20 to 40 degrees. In the Cordilleran region the coast climate is insular and winter frost is light, summer heat mild, but rains heavy, averaging 100 inches yearly on the southwest side of Vancouver Island and near Prince Rupert. Beyond the coast range, climate is generally milder, rain is lighter, and snowfall more moderate, toward the south, but northern winters are sharp. The interior plateau is arid. The Selkirk Mountains receive heavy rains and, on the west sides, huge snowfalls, but the eastern slopes receive much less. While Vancouver and Victoria are mild and moist, perpetual snows lie at heights above 8,000 feet. Northwest and northeast of Hudson Bay, the climate is too severe for the growth of trees. Best traveling time: May to September.

Monetary unit: dollar. Coins used: dollar; cent (50, 25, 10, 5, 1). One dollar equals 100 cents. U. S. currency widely used, particularly in metropolitan and border areas.

Principal cities: Calgary, Edmonton, Halifax, Hamilton, Montreal, Ottawa, Quebec, Toronto, Vancouver, Windsor, Winnipeg.

Entry requirements: Proof of U. S. citizenship.

Airlines: American Airlines (Toronto, Windsor), Colonial Airlines (Montreal, Ottawa), Northeast Airlines (Montreal), Northwest Airlines (Winnipeg), Trans-Canada Air Lines (Calgary, Edmonton, Halifax, London, Montreal, Ottawa, Toronto, Vancouver, Windsor, Winnipeg), United Air Lines (Vancouver).

Steamships: To Halifax: Canadian National Steamship Co. (Brit), Furness Line (Brit). To Montreal: Canadian National, Canadian Pacific (Brit). To Quebec: Canadian National. To Vancouver: Canadian Pacific, Klaveness Line (Norweg).

Hotels: Calgary: Carlton, Noble, Palliser, Wales. Edmonton: Alberta, Corona, King Edward, Macdonald. Halifax: Carleton, Lord Nelson, Nova Scotian. Hamilton: Regal, Royal Connaught. Montreal: Ford, Mount Royal, Queen's, Ritz-Carlton, Windsor. Quebec: Chateau Champlain, Chateau Frontenac, Clarendon, Kent House, St. Louis, St. Roch. Toronto: Ford, King Edward, Royal York, St. Regis. Vancouver: Georgia, Vancouver. Winnipeg: Fort Garry, McLaren, Royal Alexandra.

American Express Offices: Montreal: Sun Life Building.

Winter sports carnival at Banff, Alberta, from January to March. Allan Cup amateur national hockey championships and Stanley Cup international hockey play-offs in April. Queen's Birthday celebrated with parades May 24. Apple Blossom Festival at Kentville, Nova Scotia, in late May or early June. Dominion Day, July 1, observed with parades, fireworks, sports events. Street dancing, log-rolling, crowning of Lumber Queen at Duncan, British Columbia, in July. Grand opera under starlight in Montreal in July. Bastille Day band festival July 14 at Montreal. Horse races, Indian ceremonies, fireworks, North American rodeo championship events the second week in July at Calgary, Alberta. Highland games at Antigonish, Nova Scotia, July 17. Indian ceremonies, Royal Mounted Police events, covered wagons, historical pageants, fireworks and rodeo events at Banff the third week in July. Gaelic Mod and highland gathering at St. Ann's Gaelic college, Nova Scotia, in late July. In Quebec, St. Anne de Beaupré Day is honored July 26 with religious processions. Agriculture and Industry Exhibition, rodeo events at Edmonton, Alberta, the third week in July. Harness racing, agricultural exhibits cele-

brate Provincial and Old Home Week on Prince Edward Island in August. International tuna tournament at Wedgeport, Nova Scotia, in August. National Exposition in Toronto during September. Royal Winter Fair, including international horse show, at Toronto in November.

Mexico

Severed mid-way by the Tropic of Cancer, stretched along a vast area and flanked by Pacific and Gulf waters, mountainous and tropical Mexico has great variations in climate. Low elevations are hot and the mean temperatures in the *tierra caliente*, which includes the Yucatán Peninsula, Tabasco, part of Chiapas, the isthmus of Tehuantepec and some of Oaxaca, ranges from 77 to 82. Progreso, on the Yucatán coast, averages 77 as a daily high in its coldest month, January, the temperature climbing to daily high average of 80 during June, July and August, with high humidity. Mazatlán, on the Pacific, rather similar, although slightly warmer during July and August. The *tierra templada*, 5,500 to 6,000 feet, is composed in Nuevo León, San Luis Potosí, most of Coahuila, nearly half of Tamaulipas, part of Vera Cruz, almost all of Guerrero, Jalisco, Sinaloa and Sonora and is more temperate averaging 75 as an annual mean, and is probably the best of the climatic zones. In the higher parts of the plateau, the *tierra fría*, the average annual mean is 63 and although there is often slight frost at night, there are no cold winters nor very hot days. Mexico City, at 7,411 feet, averages a daily high of 66 and a low of 50 during January, the daily high averages only 76 in June with a low average the month of 55. The temperature has a daily range of 20 degrees all year with December and January the coldest months, April and May the warmest. In winter, the temperature at Mexico City sometimes dips to 50 at night. South of the Tropic of Cancer rains are heavy, being about 80 to 100 inches annually in southern Campeche, Tabasco and Vera Cruz. From June to November, hurricanes sometimes strike the Caribbean and Pacific coastlands, occurring most frequently in September. At Mexico City, the dry season begins in October, ends in June, and it is colder there during the rainy season which is the rest of the year. Except for the lowlands, the travel season is year around. For the lowlands, best travel time is November to March.

Monetary unit: peso. Coins used: peso; centavo (50, 20, 10, 5, 2, 1). One peso equals 100 centavos.

Principal cities: Acapulco, Chihuahua, Cuernavaca, Guadalajara, León, Mazatlán, Mérida, Mexico City, Monterrey, Pachuca, Puebla, Saltillo, Tampico, Torreón, Veracruz.

Entry requirements: Tourist card. Tourists proceeding from Mexico to Guatemala are required to surrender tourist cards in Mexico prior to departure. After arrival in Guatemala they must present themselves to Mexican Consulate to obtain a new tourist permit for entry into Mexico upon return journey. To secure second tourist permit in Guatemala, traveler must present proof of U. S. citizenship, three photographs.

Airlines: PAA (Guadalajara, Mazatlán, Mérida, Mexico City, Monterrey, Tampico, Vera Cruz); TACA (Mexico City); American Airlines (Mexico City, Monterrey); Braniff Airways (Mexico City, Monterrey).

Steamships: To Progreso: Yucatan Line (Norweg). To Tampico: Cuba Mail Line (Amer). Standard Fruit (Amer). To Vera Cruz: Cuba Mail Line, Fred Olsen Line (Norweg), Standard Fruit, Smith and Johnson (Norweg), Wilhelmsen Line (Norweg).

Hotels: Acapulco: América, Del Monte, El Mirador, Flamingos, Las Hamacas, Mar Azul, Papagayo. Chihuahua: Apolo, Palacio Hilton, Victoria. Cuernavaca: Chula Vista, De La Selva, Marik. Guadalajara: Del Parque, Fenix, Guadalajara, Ideal, Paris, Imperial. León: Condesa, Frances, Mexico. Mazatlán: Belmar, Central Mazatl. Mérida: Colon, Gran, Itza, Mérida, Mexico City: Marlton, De Cortes, Diana, Geneve, Gillow, Isabel, L'Escargot and Garden Courts, Maestric, Maria Cristina, Montejo, Ontario. P.A., Plaza, Reforma, Regis, Ritz, Waldorf. Monterrey: Colonial, Gran Hotel Ancira, Monterrey. Saltillo: Arizpe y Sainz, Casa Colonial, Casa Lozano. Tampico: Imperial, Angleterra, Rivera. Vera Cruz: Diligencias, Imperial, Mocambo, Villa del Mar.

American Express Representatives: Mexico City: Wells Fargo, Plaza de la Republica 55; Wells Fargo, Avenida Madero 14.

Local fiestas occur throughout Mexico every day and are usually celebrated with native songs, dances, fireworks, puppet shows, sports, bullfights, cockfights and, often, religious ceremonies, although each town has its own holiday characteristics. For information regarding events at points along his itinerary, the traveler may inquire of any American Express representative, as fiesta dates are sometimes changed or cancelled and the list below is necessarily quite limited. New Year's festivities are held throughout Mexico. Picturesque Fiesta at Jojutla, between Cuernavaca and Taxco, January 1-7. Celebration of founding of city at León, January 17. Tarascan dances, rodeos, honoring Our Lord of the Rescue at Tzintzuntzan, February 1. National holiday in anniversary of the constitutions of 1857 and 1917, February 5. Carnival Week, immediately preceding Lent, celebrated everywhere with notable

carnival activity at Mexico City, Mazatlán, Mérida, Oaxaca, Taxco, Vera Cruz and Huejotzingo, two hours from Mexico City, where a drama is enacted from dawn to sundown of Shrove Tuesday depicting 1862 victory over French with sham battles, dances, burning of thatch hut. Fiestas on the first Friday of Lent at Tepalcingo and Chalma. Patron saint of San Gregorio Acapulco, between Xochimilco and Tláhuac, honored March 12. During Holy Week, Indians perform the Last Supper at Tzintzuntzan on Maundy Thursday; Santa Anita, outside Mexico City, has a flower festival on Good Friday, while at Tlacolula splendid fiesta activities include plume dance. Serenades, bullfights, fireworks included in commemoration of founding of San Marcos, outside Aguascalientes, April 20-May 5. Celebration of 1862 victory at Acapulco May 1-8. Day of the Holy Cross, May 3, celebrated throughout Mexico. National holiday on May 5 in honor of 1862 victory. Corpus Christi celebrated most notably in the cathedral at Mexico City. Cockfights, horse races, religious ceremonies honor St. Anthony at Rio Verde on June 10-18. Aquatic events at Guanajuato June 23-July 7. Commemoration at Oaxaca of death of Miguel Hidalgo y Costilla on July 30. Our Lady of El Carmen honored at Motul, near Mérida, July 8-16. National holiday in honor of Alvaro Obregón, military hero, July 17. National holiday in honor of Benito Juárez, reform leader, July 18. Fair and fiesta at Saltillo August 1-6. Bullfights, horse races, cockfights at Huamantla August 12-21. Commemoration of treaty signing at Córdoba August 22-26. Virgin of Remedies Day at San Bartolo Naucalpan, near Mexico City, September 1-8. Fiesta at Chihuahua September 10-15. National holiday, equivalent to U. S. Fourth of July, in commemoration of Hidalgo's declaration of independence on September 16. Fiesta at Mérida September 27-October 14. San Miguel Day at Taxco September 29. St. Francis of Assisi honored at Pachuca October 1-12. National holiday October 12. All Saints' Day and All Souls' Day celebrated throughout nation November 1-2. National holiday in commemoration of 1910 revolution's start November 20. Patron saint of the republic, the Virgin of Guadalupe, honored at Guadalupe December 3-13, December 12 being the most important day of festivities. Fiesta in honor of the Virgin of Guadalupe at Monterrey December 12-26. Nine nights of festivities precede the Christmas season throughout Mexico.

Travelers wishing to motor to Mexico City may drive over the Pan American Highway from Laredo, Texas, a distance of 763 miles. The Missouri Pacific Railroad operates through Pullman service daily from St. Louis via Laredo to Mexico City and the Pennsylvania Railroad offers similar service from New York City.

CENTRAL AMERICA

British Honduras

Hot and humid, with average monthly temperatures ranging from 76 in January to 83 in August, days about 3° warmer, nights about 3° cooler. Rainfall is moderate to extremely heavy, with June to November the wettest months. Belize has an annual rainfall of 84 inches. Best traveling time: November to May.

Monetary unit: British Currency.

Principal city: *Belize*.

Entry requirements: Passport. Health certificate, smallpox vaccination not required but officially advised.

Airlines: TACA (Belize).

Steamships: To Belize: Canadian National Lines (Brit), Crenshaw Bros. Produce (Amer), United Fruit Lines (Amer).

Hotel: Belize: Palace.

National Holiday September 10.

Costa Rica

Coast lands are hot, central plateau is equable, and the higher elevations are cool, sometimes cold. Seasonal rains are heavier in the highlands, but throughout the country from May to November extreme rainfall makes travel in some sections impossible. San Jose has an average daily temperature of 72. Best traveling time: December to April.

Monetary unit: colon. Coins used: colon; centimo (50, 25, 10, 5, 2). One colon equals 100 centimos.

Principal cities: Limon, *San Jose*.

Entry requirements: Passport, visa, health certificate, smallpox vaccination, police certificate.

Airlines: PAA (San Jose), TACA (Limon, San Jose).

Steamships: To Limon: Grace Line (Amer), United Fruit Lines (Amer).

Hotels: Limon: Park, Pension Costa Rica. San Jose: Continental, Europa, Gran Hotel Costa Rica, Metropoli, Rex.

Feast of St. Peter and St. Paul celebrated June 29. August 2 is the Feast of Our Lady of the Angels; the festivities at Cartago are the climax of a pilgrimage. September 15 is Independence Day. In village squares bullfighting, good-natured and not deadly, is performed with no harm to the bull. Jaguar and puma hunting is available in Guanacaste province, with smaller animals, such as mountain goat, deer, and wild boar, also found. There is no closed season, but during rainy season ground is difficult to traverse.

El Salvador

Hot in the lowlands, warm but equable in higher elevations. The rainy season lasts

from May to November, the dry from December to March, with both the coolest months, December and January, and the hottest, March and April, in this period. San Salvador ranges from a daily average high of about 85 in December to an average daily low of about 59 during January. Best traveling time: December to March.

Monetary unit: colon. Coins used: colon; centavo (50, 25, 20, 10, 5, 3, 1). One colon equals 100 centavos. U. S. currency is used freely with no exchange regulations.

Principal city: *San Salvador*.

Entry requirements: Passport, visa plus consul endorsement, health certificate, smallpox certificate. For visits of less than eight days, if tourist has a PAA tourist card, he needs only smallpox vaccination and transportation ticket for return or to country beyond admitting entry.

Airlines: PAA, TACA (Both to San Salvador).

Steamships: To La Libertad: Grace Line (Amer), Pacific S & N Co. (Brit), Standard Fruit (Amer), United Fruit (Amer).

Hotels: San Salvador: Astoria, Centro Americano, Continental, Nuevo Mundo.

From July 25 to August 6, the Feast of the Holy Saviour is a colorful, gay fiesta in San Salvador, with numerous floats drawn through the streets. Last day of the festival is devoted to religious ceremonies. November 5 is Independence Day. On December 12, Day of the Indian, children dress in genuine Indian costume, march in processions. La Libertad has fine surf bathing.

Guatemala

In the highlands there is small temperature variation throughout the year, with cool nights and equable days. The coastal areas are hot, damp, with an average temperature of 80. During the coldest months, December and January, Guatemala City has an average temperature of 60, with 6 the average during the hottest months, March and April. June and September are the wettest months, the rainy season lasting from May to November, with most rainfall on the Atlantic coast. Guatemala City has 50 inches of rain annually. Best traveling time: November to May.

Monetary unit: quetzal. Coins used: quetzal; centavo (25, 10, 5, 2, 1, ½). One quetzal equals 100 centavos.

Principal cities: Coban, *Guatemala City*, Totonicapan.

Entry requirements: Tourist card.

Airlines: PAA (Guatemala City).

Steamships: To Puerto Barrios: Crenshaw Bros. Produce (Amer), United Fruit Lines (Amer).

Hotels: Guatemala City: Astoria, Gran, Palace, Pension Gueroult, Pension Royal (none).

National Fair in Guatemala City for week starts on the third Sunday in November. During this holiday races are held in Parque Aurora. Excellent deep-sea fishing exists off Puerto Barrios. For hunters, the Coban region has much game, September to January being the closed season. Numerous wooded areas offer fine hunting almost anywhere in the country. Fiestas are held at Coban during Holy Week and for St. Dominic, August 4.

Honduras

Although hot and humid in the coastal lowlands, the climate inland, particularly at 3200 feet (around Tegucigalpa), is ideal, despite occasional summer temperatures of 90. The highland rainy season lasts from the end of May through November, the dry season from December to May. Midland temperature averages 85, but lower humidity makes this seem cooler than the coast, with an 80 temperature or more during the rainy season, mid-September through February. During the dry season, March to mid-September, coastal temperatures of 90 are oppressive owing to the high humidity. Best traveling time: November to May.

Monetary unit: lempira. Coins used: lempira; centavo (50, 20, 10, 5, 2). One lempira equals 100 centavos.

Principal cities: San Pedro, Tegucigalpa.

Entry requirements: Passport, visa, smallpox vaccination certificate.

Airlines: PAA (Tegucigalpa), TACA (San Pedro, Tegucigalpa).

Steamships: To Puerto Cortez: United Fruit (Amer).

Hotels: San Pedro: Internacional, Roosevelt. Tegucigalpa: Las Americas, Ritz, Shanghai, Tegucigalpa Palace.

Villages honor patron saint, San Pedro having one of the most picturesque ceremonies from June 23 to July 4; Tegucigalpa honoring St. Benedict during Holy Week, holding the Feast of the Immaculate Conception December 8 to January 1. Hunting, fishing, sailing, swimming all very good.

Nicaragua

Hot on the coast, mild inland, temperatures drop to cool, even cold, in the mountains, depending on altitude. Seasonal variations are slight, the temperature ranging from 60 to 90 across the country, with extreme heat felt in the highlands in the middle of the day only. Along the Atlantic, rainfall is light to moderate all year, the Caribbean coast being one of the world's rainiest places, while the Pacific has wet and dry seasons. December to May is the dry season at Managua. Best traveling time: December to May.

Monetary unit: cordoba. Coins used: cordoba; centavo (50, 25, 10, 5, 1, ½). One cordoba equals 100 centavos.

Principal cities: Leon, Managua.

Entry requirements: Passport, visa, health certificate, police certificate.

Airlines: PAA, TACA (Both to Managua).

Steamships: To Bluefields: Standard Fruit & Steamship Co. (Amer), United Fruit (Amer).

Hotels: Leon: Metropolitano. Managua: Gran, Lido Palace, Pan-American, Sevilla.

Santo Domingo, most impressive fiesta, celebrated August 1 to 10 in Managua. Unique ceremonies honor Holy Week in Leon. Cockfights Saturdays and Sundays throughout country. Bullfights, with best at Managua, held the same time, but torreador attempts to ride the bull, not kill it.

Panama and Panama Canal Zone

Cristobal's temperatures, with 83 to 85 as daily high averages and 74 to 77 as daily low averages, are typical of Panama and the Zone. Mild breezes temper the climate, making the nights cool. Rainfall is heavier and more frequent on the Atlantic side than the Pacific, the season lasting from mid-May to December, with heaviest showers in October and November. Although the Atlantic side has showers even during the dry season, this period is the best traveling time: December to April.

Monetary unit: balboa. Coins used: balboa; centavo (50, 25, 10, 5, 2½, 1). One balboa equals 100 centavos. United States currency is extensively used.

Principal cities: Ancon, Balboa, Colon, Cristobal, Panama City.

Entry requirements: Tourist card.

Airlines: PAA (Balboa, Cristobal, Panama City), TACA (Balboa), Braniff Airways (Balboa).

Steamships: To Balboa: American President Lines (Amer), Grace Line (Amer), United Fruit Lines (Amer). To Cristobal: American President Lines, Chilean Line (Chile), Elliot Line (Amer), Grace, Lykes Line (Amer), Moore-McCormack Lines (Amer), Standard Fruit (Amer), United Fruit. To Zone: American President Lines, Chilean Line, Furness Line (Brit), Grace Line, Holland-America Line (Dutch), Interocean (Norweg), Johnson Line (Swed), Knutsen Line (Norweg), Lykes Line, Moore-McCormack Lines, New Zealand Shipping Co. (Brit), Pacific Navigation Co. (Brit), Panama Line (Pan), Prince Line (Brit), Royal Mail Lines, Ltd. (Brit), Royal Netherlands Line (Dutch), Standard Fruit and Steamship Co., United Fruit.

Hotels: Ancon, Balboa and Panama City are virtually one extended city, the best hotel being the government-owned one at Ancon, the Tivoli, one mile from Panama

City. In Panama City, however, there are also the hotels Central, Colon, Colombia, and Internacional. Cristobal and Colon (geographically the same, divided by Eleventh Street, with Cristobal the U.S. town): Carlton, Washington.

For four days preceding Ash Wednesday, Carnival is held and is at its most spec-

tacular at Panama City, where men and women dress in native costumes and Indians present dances. Racing at Panama City all year, each Sunday; dog races during the summer. Splendid fishing off Pearl Islands, off San Blas coast, in Laguna de Chiriqui, with Pacific better than Atlantic during winter.

SOUTH AMERICA

Argentina

Seasons are the opposite of the United States, winter being from June to September. In the provinces of Buenos Aires, Corrientes, Entre Rios, and Santa Fe, summer temperatures rise to the 90's, but the winters are mild. The Andean Plateau is arid in the north, and the south has cold winds and the greatest rainfall. In this region temperatures vary greatly between night and day. Central Argentina is largely arid, with summer temperatures often above 100; winters are colder than in the east. At Buenos Aires, the days from December to February are warm, often in the lower 80's, the nights cool or mild. Best traveling time: September to June.

Monetary unit: gold peso (nominally); paper peso (in actual circulation). Coins used: centavo (20, 10, 5, 2, 1). One peso equals 100 centavos.

Principal cities: Bahia Blanca, Buenos Aires, Cordoba, La Plata, Mendoza, Rosario, Santa Fe, Tucuman.

Entry requirements: Passport, visa, health certificate, smallpox vaccination, letter of recommendation, police certificate, three photographs. Authorization must be obtained from Argentina, applicant paying cable expense.

Airlines: PAA-PANAGRA (Buenos Aires, Cordoba, Tucuman, Salta), Braniff Airways (Buenos Aires), British South American Airways, Ltd.

Steamships: To Buenos Aires: Blue Star Line (Brit), Delta Line (Amer), Furness (Brit), Grace Line (Amer), Lykes Line (Amer), Johnson Line (Swed), Prince Line (Brit), Royal Mail Lines, Ltd. (Brit), Westfal-Larsen (Norweg), Wilhelmssen Line (Norweg), American Republics Line (Amer), Boyd, Weir & Sewell (Brit), Moore-McCormack (Amer).

Hotels: Buenos Aires: Alvear Palace, Castelar, City, Continental, Jousten, Nogaro, Phoenix, Plaza, Avenida Palace, Gran. Cordoba: Bristol, City, Plaza, Palace. La Plata: Ardini, Argentino, Savoy. Mendoza: City, Espana, Imperial, Italia, Plaza, Roma. Rosario: Britania, Colonial, Firenze, Gran Hotel America, Palace, Savoy. Santa Fe: Espana, Italiano, Plaza, Ritz, Royal, Tucuman: Espana, Internacional, Savoy.

American Express Offices: Villalonga-American Express Co. S. A. of T. Buenos Aires: Calle Peru 22. Cordoba: Rivera In-

darte 165-71. Mar del Plata: Santiago del Estero 1723-27. Mendoza: Godoy Cruz 147/51. Rosario: Santa Fe 1271. Santa Fe: 25 de Mayo 2100. Tucuman: Munecas 354.

Carnival is held for three days preceding Lent, with the greatest gaiety at popular resorts near Buenos Aires, particularly at Mar del Plata. Independence Day celebrated May 25. At Mendoza a colorful Wine Festival is held about April 1. The Feast of St. Martin, patron of Buenos Aires, is celebrated in that city November 11. At the shrine of Lijun on May 21, the Day of Our Lady of Lijun is honored by pilgrims from all over Argentina. At season's height, horse races are glittering social events, the course at Mar del Plata being famous for its beauty. The Jockey Club holds races at the Hipodromo Argentino in Parque Palermo in Buenos Aires and in San Isidro, near the capital. Excellent skiing as well as mountain climbing can be enjoyed at Nahuel Huapi National Park at San Carlos de Bariloche. International Regatta is held at Tigre, 25 miles from Buenos Aires, November 11. Polo matches near Parque Palermo in Buenos Aires are held in late spring and summer.

Bolivia

In the Amazonian lowlands the temperature averages 80, with the Yungas region (up to 8,000 feet) more temperate. The punas, or steppes, 11,000 to 14,000 feet high, have a temperature averaging 50. Rainfall around La Paz is very light during the winter, July to September, and the rainy season extends from January to May, consisting usually of tropical showers rapidly followed by clear skies. With no unpleasant temperature extremes, Sucre has an agreeable climate. January has the warmest days, July the coolest, with an annual mean temperature of 57. Best traveling time is the Bolivian autumn, May and June.

Monetary unit: boliviano. Coins used: boliviano (20, 10, 1); centavo (50, 20, 10, 5). One boliviano equals 100 centavos.

Principal cities: La Paz, Sucre.

Entry requirements: Passport, Bolivian tourist passport, health certificate, smallpox vaccination, letter of presentation from travel agency or steamship agency.

Airlines: PAA-PANAGRA (La Paz), Braniff Airways (La Paz).

Hotels: La Paz: Gran Hotel Paris, International House, Sucre Palace. Sucre: Colon, Hispanoamericana, Londres, Real.

Carnival for three days preceding Ash Wednesday, with most elaborate celebrations at Cochabamba, Sucre, Santa Cruz. Copacabana on shore of Lake Titicaca one of the most spectacular religious festivals in South America begins August 1, lasting several days. Independence Days August 5-7) celebrated widely. Indians bring numerous handiworks to Alacitas fair January 24-29 at La Paz.

Brazil

Although seasons are the opposite of the United States, the vast territory and topographical extremes present a varied climate. The extreme north has an equatorial climate, although coastal breezes bring coolness, even in summer. In general, the northeast and central states, while subtropical, have temperatures comparable to New York in summer, only seldom rising higher. The mountain regions inland are at times cold but usually cool. In Rio de Janeiro, the winters are warm and mild, with summer days averaging in the low 70's, February generally the warmest month. Winter is the dry season, summer the wet, and in the far north the heaviest rains fall from December to April or May. In the south central and southern states rainfall is more equally distributed throughout the year, the summer still having more than winter, however. From the mouth of the Amazon to Natal the heaviest rains come from March to May, usually ending abruptly each day around 4:30 p.m. From the state of Pernambuco to Bahia, the rainy season is in late autumn and winter, May and June being rainiest, October to December driest. Best traveling time: June to September.

Monetary unit: cruzeiro. Coins used: cruzeiro (2, 1); centavo (50, 40, 30, 20, 10). One cruzeiro equals 100 centavos.

Principal cities: Arassuahy, Belem, Bello Horizonte, Campinas, Campos, Caratinga, Curitiba, Fortaleza, Itaperuna, Juiz de Fora, Maceio, Niteroi, Parahiba, Pelotas, Petropolis, Porto Alegre, Recife, Rio de Janeiro, Santo Amaro, Santos, São Paulo, São Salvador (Bahia), Theophilo-Otoni.

Entry requirements: Passport, visa, health certificate, smallpox vaccination, four photographs.

Airlines: PAA-PANAGRA (Belem, Coarumbá, Natal, Rio de Janeiro, São Paulo), TACA (Belem, Rio de Janeiro, São Paulo), Braniff Airways (Rio de Janeiro, São Paulo), British South American Airways, Ltd., Panair do Brasil.

Steamships: To Bahia, Rio de Janeiro, Santos: American Republics Line (Amer), Boyd, Weir & Sewell (Brit), Blue Star Line (Brit), Delta (Amer), Furness (Brit),

Johnson (Swed), Moore-McCormack (Amer), Prince Lines (Brit), Royal Mail Lines, Ltd. (Brit), Wilhelmsen Line (Norweg), Westfal-Larsen (Norweg), Lloyd Brasileiro (Brazil).

Hotels: Belem: America, Central, Grande. Bello Horizonte: Avenida, Grande, Sul Americano. Fortaleza: Excelsior, Palace. Maceio: Bela Vista, Grande Ponto. Petropolis: Casino Palace, Central, Damas, Europa, Reis, Porto Alegre: Grande, Majestic, Novo Grande, Novo Jung. Recife: Central, Gloria, Grande, Palace, Parque, Recife. Rio de Janeiro: American, Avenida, Central Copacabana Palace, dos Estrangeiros, Gloria, Itajuba, Luxor, Natal, Palace, Pax. Santos: Avenida Palace, Atlantico, Belvedere, Parque Baleario, Santos. São Paulo: City, Esplanada, Palace, Plaza, Rex, São Bento, Suisso, Terminus. São Salvador (Bahia): Grande, Meridional, Nova Cintra, Palace.

American Express Office: Rio de Janeiro: 120 Avenida Rio Branco. (S.A.V.I.)

The Carnival for three days preceding Lent reaches its most spectacular height in the famed celebrations at Rio de Janeiro. Every Sunday in October, in Rio, the religious festival of Our Lady of Penha is held. Virtually all coastal cities have excellent bathing beaches.

British Guiana

Hot and humid; cooler on the coast than inland. Coastal temperatures in January average 78, in September and October 81, with about a 6° variation between day and night. Inland, January temperatures average about 81, September and October 84, with a 10° daily variation. Rainfall is moderate to extremely heavy, with greatest precipitation along the coast. Heaviest rains occur during May, June, and July. Best traveling time: December to April.

Monetary unit: British currency.

Principal city: Georgetown. (Also called Demerara).

Entry requirements: Passport and visa.

Airlines: PAA (Georgetown).

Steamships: To Georgetown: Alcoa (Amer), Canadian National (Brit), Furness (Brit), Royal Netherlands SS Co. (Dutch), Surinam Navigation Co. (Dutch).

Hotels: Georgetown: Demerara Ice House, Park, Regent, Tower.

In February, on the sugar estates, the Tadjá, an Indian celebration, is held. Children parade on Empire Day (May 24). Other British holidays are celebrated. The first Monday in August is observed as the Day of Emancipation of Slaves. In the heart of the tropical region are Kaeteur Falls, five times the height of Niagara.

Chile

In the extreme north, the days are hot, the nights warm, on the coast and cool

in the interior. Central Chile has a sunny climate comparable to southern California, the warmest summer days cooled by breezes; winter usually brings steady rain. Southward in the lake regions and central Chile, the climate is similar to the Pacific Northwest, with January to March the best time to visit this area, Chile's seasons being the reverse of the United States. In the southern archipelago and around Punta Arenas, fogs and storms keep the mean temperature about 50 in the warm season. At Valparaiso, warmer than Santiago in the southern winter and cooler in summer, the average daily high is 73 during January. Best traveling time: October to April.

Monetary unit: peso. Coins used: peso (100, 50, 20); centavo (20, 10, 5). One peso equals 100 centavos.

Principal cities: Antofagasta, *Santiago*, Valparaiso, Vina del Mar.

Entry requirements: Passport, visa, police certificate, health certificate, smallpox vaccination, three photographs.

Airlines: PAA-PANAGRA (Arica, Antofagasta, Santiago).

Steamships: To Antofagasta and Arica: Chilean Line (Chile), Grace Lines (Amer), Lykes (Amer), Pacific S&N Co. (Brit). To Chanaral: Grace Lines. To Valparaiso: Same as Antofagasta plus Isthmian Line (Amer), West Coast Line (Danish), Westfal-Larsen (Norweg).

Hotels: Antofagasta: Londres, Maury. Santiago: Bidart, Carrera, Claridge, Crillon, Grand, Mundial, Oddo, Ritz, Savoy, Splendid, Victoria. Valparaiso: Adria, Astur, Florida, Herzog, Palace, Paris, Royal, Lebell, Liguria, Rolfo. Vina del Mar: Alcazar, Embassy, France, O'Higgins, Maria Antonieta, Merlier, Park, Pension Europea, Villa Bettina, Playa.

The Carnival at Lent, observed in most of South America, attracts little attention in Chile. The Carnival of Spring, however, is celebrated October 12 with floats and parades. The Day of St. Peter and St. Paul is celebrated June 29 in all ports with religious processions and pageants. Skiing season lasts from middle of June to November, and Farrellones, site of international skiing contests, has fine facilities. Portillo, northeast of Santiago, boasts the country's most luxurious winter hotel. Horse racing at Vina del Mar is held during summer, September is the rodeo season.

Colombia

Depending on latitude, Colombian climate ranges from torrid heat in some coastal cities to freezing temperatures in the high mountains. Towns on the coast and river ports are hot throughout the year. Summer is the dry season, winter the wet, but the seasons are not uniform throughout the country. Best traveling

time: March to May; September to November.

Monetary unit: peso. Coins used: peso centavo (50, 20, 10, 5, 2, 1). One peso equals 100 centavos.

Principal cities: Barranquilla, *Bogota*, Medellin.

Entry requirements: Passport, visa, health certificate, police certificate, letter of recommendation. Authorization must be obtained from Colombia, communication being paid for by applicant. Proof of birth and, if married, proof of marriage status. Transits stopping less than twenty-four hours need no letter of recommendation but must have round-trip ticket or through transportation to country beyond that will grant entry.

Airlines: KLM (Barranquilla), PAA-PANAGRA (Barranquilla, Cali), TACA (Bogota, Medellin).

Steamships: To Barranquilla: Grace Line (Amer), Lykes Lines (Amer), Moore-McCormack (Amer), United Fruit (Amer).

Hotels: Barranquilla: Astoria, de Prado Tivoli, Moderno. Bogota: Atlantico, Astor Claridge, Granada, Regina. Medellin: Bristol, Europa, Berlin.

Miracle plays at Popayan January 6 and ceremonies during Holy Week outstanding religious festivals. At Bogota, almost every Sunday during February and March, bullfights are held.

Dutch Guiana (Surinam)

High humidity, usually hot, the lowest temperature ever recorded being 62. From January to March at Paramaribo on the coast, the average temperature is 78, rising to an average of 81 during September and October. There is a daily variation of 7° on the coast and 10° inland, where temperatures are slightly cooler. Rainfall is heavy, reaching its maximum from April to July. Best traveling time: September to November; February to April.

Monetary unit: Netherlands currency.

Principal city: Paramaribo.

Entry requirements: Passport, health certificate, smallpox vaccination, police certificate, possession of round-trip ticket or transportation to country beyond granting entry.

Airlines: KLM, PAA, TACA (All to Paramaribo).

Steamships: To Paramaribo: Alcoa (Amer), Royal Netherlands SS Co. (Dutch), Surinam Navigation Co. (Dutch).

Hotels: Paramaribo: Palace, Riverview.

Ecuador

Although situated almost on the equator Ecuador has a varied climate because of its mountain ranges. Owing to Pacific trade winds and the Humboldt Current, the tropic

ral coastal region averages 83°, but the trans-Andean region is densely tropical, hot, and with much rainfall. Temperatures in the Andean plateau range all year from 63 to 70. The dry season extends from June through November, the rainy season from December through April or May, at which time the roads in the south and coastal regions are usually impassable. Best traveling time: June to November.

Monetary unit: sucre. Coins used: sucre (2, 1); centavo (50, 10, 5, 2½, 1). One sucre equals 100 centavos.

Principal cities: Guayaquil, *Quito*.

Entry requirements: Passport, visa, health certificate, smallpox certificate, police certificate, seven photographs, round-trip ticket or sufficient funds to leave or transportation to country beyond that will grant entry. Transits staying less than 72 hours do not require a visa.

Airlines: PAA-PANAGRA (Guayaquil, *Quito*), TACA (Guayaquil, *Quito*), Braniff Airways (Guayaquil, *Quito*).

Steamships: To Guayaquil: Chilean Line (Chile), Furness (Brit), Grace Lines (Amer), Johnson Line (Swed), Lykes Line (Amer), Pacific S&N Co. (Brit).

Hotels: Guayaquil: Grant, Metropolitano. *Quito:* Metropolitano, Savoy.

Carnival preceding Lent offers various Indian dances. Holy Week celebrated with pageantry and Indian customs. Cockfighting in almost all towns, Guayaquil having particularly large pit.

French Guiana (Cayenne) and Inini

With the lowest temperature on record 55, the highest 97, the climate is consistently hot and humid, with January temperatures averaging 79, September and October 82. The daily variation is about 5°. Rainfall is extremely heavy, the maximum precipitation from December to June, with May the peak month. Best traveling time: March, April; September, October.

Monetary unit: French currency.

Principal city: *Cayenne*.

Entry requirements: Passport, visa, health certificate, smallpox vaccination.

Airlines: PAA (Cayenne).

Steamships: To Cayenne: Alcoa (Amer), Surinam Navigation Co. (Dutch).

Hotels: Cayenne: Grand Hotel Verdun, Palmistes.

Paraguay

Paraguay, although in the tropics, is nevertheless mild in general, except northward. December to February are the warmest months, summer lasting from October to March. When the wind blows from the north, the heat is intense. In the environs of Asunción during June, the coolest month, the temperatures average 55. Al-

though there is no set rainy season, thunderstorms around Asunción occur with violence during summer. Best traveling time: April to September.

Monetary unit: guaraní. Coins used: peso (10, 5, 2, 1); centavo (50, 25, 20, 10, 5, 1). One peso equals 100 centavos. Argentine currency is extensively used.

Principal cities: *Asunción*, Villarrica.

Entry requirements: Passport, visa, police certificate, smallpox vaccination, health certificate, examination for trachoma.

Airlines: PAA-PANAGRA (Asunción), Braniff Airways (Asunción).

Hotels: Asunción: Argentine, Colonial, Gran Hotel del Paraguay.

Feast of San Blas, patron saint of the republic, celebrated February 3. Spring festival, a student's carnival, held September 21. Excellent hunting for jaguars, wild hogs, deer, and game birds, in the Chaco region.

Peru

From June to November, the coastal region is swept by fogs and heavy clouds, with the temperature rarely below 55. The coast is arid but suffers no extremes in heat and cold, summer temperatures ranging in the 90's for the December to May period. The Amazon basin is hot, the Andean area cold depending on the altitude, and temperatures change rapidly with increased elevation. In the sierra zone, October to April is winter and wet, May to September is summer and dry, reversing the coastal seasons. Noon temperatures are 80 to 85 at 3,000 to 8,000 feet but the nights are cool. In the east, at 1,000 to 3,000 feet altitude, the temperature ranges between 75 and 95, with mild or cool evenings. It is warmer in the lowland, and the humidity is frequently high. Best traveling time: November to April.

Monetary unit: sol. Coins used: sol; centavo (50, 20, 10, 5, 2, 1). One sol equals 100 centavos.

Principal cities: Arequipa, Callao, *Lima*, Trujillo.

Entry requirements: Passport, visa, health certificate, smallpox vaccination, police certificate. Transients need only valid passport.

Airlines: PAA-PANAGRA (Chiclayo, Talara, *Lima*), Braniff Airways (*Lima*).

Steamships: To Callao: Chilean Line (Chile), Grace Lines (Amer), Johnson Line (Swed), Lykes Lines (Amer), West Coast Line (Dan).

Hotels: Arequipa: Arequipa, Quinta Bates, Castro, Collins. Callao: Italia, Lima Country Club. *Lima:* Gran Hotel Bolívar, Francia e Inglaterra, Gran, Leon, Gran Hotel Maury, Plaza, Country Club (in San Isidore district). Trujillo: Edificio Jacobs, Nuevo Americano.

Carnival at Lima for three days preceding Lent, but best fiesta is June 24, at nearby plains of Amancaes. People attend from all over Peru, wearing regional costumes, dancing, celebrating. Pear Festival (January 6) at Tiabaya, near Arequipa. Bullfights at Lima each Sunday, December to February; horse racing April to December; cockfighting popular.

Uruguay

Winter is from June to September, with temperatures averaging 52 at Montevideo during the coldest months, June and July. During summer, the hottest months, January and February, average 73 and while there are no extremes in the weather, the temperature often changes rapidly with sudden, strong winds. Rainfall is uniform throughout the year, although August and September are slightly wetter than other months. Best traveling time: October to May.

Monetary unit: peso. Coins used: peso (5, 1); centesimo (50, 20, 10, 5, 2, 1). One peso equals 100 centesimos.

Principal cities: Montevideo, Paysandu.

Entry requirements: Passport, visa, police certificate.

Airlines: PAA-PANAGRA (Montevideo), TACA (Montevideo), British South American Airways, Ltd.

Steamships: To Montevideo: American Republics Line (Amer), Blue Star (Brit), Boyd, Weir & Sewell (Brit), Delta Line (Amer), Furness Line (Brit), Johnson Line (Swed), Moore-McCormack (Amer), Prince Line (Brit), Royal Mail Lines, Ltd. (Brit), Westfal-Larsen Line (Norweg), Wilhelmsen Line (Norweg).

Hotels: Montevideo: Centenario, Cervantes, Florida, Gran Hotel Espana, Juncal, La Alhambra, Nogaró, Palacio Salvo, Parque, Piramides, Ritz.

American Express, Rep.: Montevideo: R. Moor-Davie & Co., Convención 1455.

Three-day carnival preceding Lent is colorful festival, with many visitors arriving in Montevideo for celebrations. January 6, the Day of Kings, or Children's Day is special festival for youngsters; comic, colorful celebrations are held in Montevideo at the Centennial Stadium. In January, international horse races, tennis matches, national swimming competitions

are held in Montevideo; international yacht races, rodeos in March; regattas in April. Montevideo has numerous beaches, the most popular, Playa Ramirez, being only fifteen minutes from downtown. Paysandu, Uruguay's second city, 298 rail miles from Montevideo, has a population of only 31,000.

Venezuela

Although Venezuela lies wholly in the tropic zone, the Andes create climatic zones with temperate weather found a 7,000 to 9,000 feet. This topography modifies the seasons, but in general the wet season lasts from May to November, the rest of the year being the dry season. During December, January, and February, the coldest months, the average low is around 40. On the Caribbean coast and in the Lake Maracaibo basin, the temperature is rarely below 64, with 97 the highest average. Low and high temperature at Caracas are 61 and 72 respectively. In general, rainfall on the coast is light, but the Andes affect this distinctly, as Caracas has a light average rainfall while Merida receives heavy rains, the annual average being over 72 inches. Best traveling time: November to May.

Monetary unit: bolivar. Coins used: bolivar (100, 20, 10, 5, 2, 1); centimo (50, 25, 12½, 5). One bolivar equals 100 centimos.

Principal cities: Caracas, Maracaibo.

Entry requirements: Passport, smallpox vaccination, health certificate, police certificate, three full-face photographs.

Airlines: KLM (La Guaira, Maracaibo, Maturin); PAA-PANAGRA (Coro, La Guaira, Maracaibo, Maturin).

Steamships: To Carupano: Alcoa (Amer). Royal Netherlands Steamship Co. (Dutch). To Ciudad Bolívar: Royal Netherlands Steamship Co. To Cumana: Alcoa, Grace Lines (Amer). To Guanta and Maracaibo: Alcoa, Grace, Royal Netherlands, Lyke Lines (Amer). To La Guaira and Puert Barrios: Alcoa, Grace, Lykes, Moore-McCormack (Amer), Royal Netherlands. To Puerto La Cruz: Alcoa, Grace, Lykes.

Hotels: Caracas: Avila, Cuimera, Majestic, Melrose, Palace, Plaza, Royal, Waldorf. Maracaibo: Americano, Granada, Scandia, Victoria, Zulia.

Carnival on Monday and Shrove Tuesday. Bullfights almost every Sunday at Caracas from November to March.

WEST INDIES

Bahama Islands

Warm and humid, with January day averages 76, night 67. In July and August the days average 88, with the nights around 76. Rainfall is light to moderate, unevenly distributed throughout the islands, with wettest months May and June,

September to November. Best traveling time: November to May.

Monetary unit: British currency.

Principal city: Nassau.

Entry requirements: Tourist card, round trip transportation or transportation to country beyond granting entry.

Airlines: PAA (Nassau).

Steamships: To Nassau: Canadian National (Brit), Pacific Steamship Co. (Brit), Royal Mail Lines, Ltd. (Brit), Seaway Line (Brit).

Hotels: Nassau: British Colonial, Cumberland House, Fort Montagu Beach, Lucerne, Parliament Apartment, Prince George, Royal Victoria, Windsor, Charlotteville Guest House, Harbour View, Lofthouse and Dean Cottages, Rozelda Apartment Hotel.

Bathing, boating, sailing, fishing, all excellent. Riding, cycling, carriage riding available over colorful roads and trails. Horse racing at Montague Race Track in winter. Flamingo and Star Class boat races in February. Outdoor carnival, "Johnny Canoe," a native festival, celebrates arrival of New Year at Nassau with street dancing, floats, costumes, music and tom-toms. At Harbour Island, beach is pink, powdered coral.

Barbados

Warm, occasionally hot, the average temperatures range from 77 during January to 81 in August. Rainfall is moderate, August to October being the wettest months. Best traveling time: November to May.

Monetary unit: British currency.

Principal city: Bridgetown.

Entry requirements: Passport.

Steamships: To Bridgetown: Alcoa (Amer), American Republics Line (Amer), Canadian National (Brit), Moore-McCormack Lines (Amer), Royal Netherlands (Dutch).

Hotels: Bridgetown: Balmoral, Hastings, Marine, Ocean View, Royal Windsor.

British holidays, such as Empire Day (May 24), the King's Birthday (in June), and Boxing Day (December 26) are celebrated.

Bermuda

Humid and warm, January, February and March are the coolest months with the daytime temperatures about 68, nights about 57. From July to September, the warmest season, the days average 85, nights 73. Infrequently, temperatures rise to the 90's, drop to the 40's. Rainfall is heavy, with frequency distributed fairly evenly throughout the year. Best traveling time: November to May.

Monetary unit: British currency.

Principal city: Hamilton.

Entry requirements: None for U.S. citizens.

Airlines: BOAC, PAA (Both to Hamilton).

Steamships: To Hamilton: Alcoa (Amer), American Export Lines (Amer), Canadian National (Brit), Furness-Bermuda (Brit).

Hotels: Castle Harbor: Castle Harbor.

Hamilton: American House, Bermudiana, Langton, New Windsor, Princess. St. George: St. George.

Splendid bathing, boating, fishing. British holidays, such as Empire Day (May 24), the King's Birthday (in June), and Boxing Day (December 26) are celebrated.

Cuba

In the tropical zone, Cuba nevertheless has a subtropical, pleasant climate ranging from about 60 to 90, the heat being modified inland by mountains and plateaus and on the coast by the constant trade winds. There is rainfall throughout the year, with May to November receiving most, December to April being considered the dry season. Inland, rainfall averages 60 inches annually and the north coast receives somewhat less, the south coast having the most moderate average, 45 inches. Best traveling time: December to April.

Monetary unit: peso. Coins used: peso; centavo (40, 20, 10, 5, 2, 1). One peso equals 100 centavos. U.S. currency is extensively used at face value on par with Cuban money.

Principal cities: Camaguey, Cienfuegos, Havana, Matanzas, Sancti Spiritus, Santa Clara, Santiago.

Entry requirements: Tourist card.

Airlines: Braniff Airways (Havana), Eastern Air Lines (Havana), KLM (Camaguey, Havana, PAA (Camaguey, Cienfuegos, Havana, Manzanillo, Santiago), TACA (Havana).

Steamships: To Cienfuegos: Lykes Lines (Amer), United Fruit (Amer). To Havana: American President Lines (Amer), Boyd, Weir & Sewell (Brit), Chilean Line (Chile), Cuba Mail Line (Amer), Lykes Lines, Panama-Pacific (Amer), Standard Fruit (Amer), Stoddard-Caribbean (Amer), Pacific Steam Navigation (Brit), United Fruit, To Santiago: Lykes Lines, Standard Fruit, United Fruit.

Hotels: Cienfuegos: Bristol, La Suiza, San Carlos, Union. Havana: Bristol, Florida, Gran, Inglaterra, La Union, Nacional, Lincoln, Park View, Presidente, Plaza, Royal Palm, Siboney, Sevilla-Biltmore. Matanzas: Gran Paris, Louvre, Sevilla, Velasco. Santa Clara: Central, Florida. Santiago: Casa Grande, Imperial, Venus.

American Express Office: Havana: Paseo de Marti 410.

The lavish, colorful carnival for three days preceding Lent and on the following four Sundays is at its best in Havana, with parades, floats, street dancing, balls. Holy Week celebrations most interesting at Trinidad. Century-old celebrations take place Easter Sunday at Arroyo Arenas, ten miles from Havana, during Feast of Jesus Nazareno. Processions climax pilgrimages to village of Ceiba Mocha February 2 for ceremonies at Candlemas. Villages honor local

saints annually at various appropriate dates with picturesque performances. Horse racing is very popular in Havana from December to March and July to October. Jal alai, a Basque game and one of the fastest in the world, is played in Havana Frontons nightly. Cockfighting held in Havana pits in the afternoon. International yacht races at beginning of year. Deer and wild boar hunting in Camaguey and Oriente provinces from November 1 to December 31. Christmas Eve (Nochebuena) is widely, colorfully celebrated, particularly at Havana. Near Havana are excellent bathing beaches, La Concha being public and popular. About ninety miles off Havana is beautiful Isle of Pines, virtually a tropical garden, where the temperature is never below 58°, rarely above 90°. A popular resort.

Curaçao

Hot and humid, with average January temperatures 79°, September 83°. Daytime temperatures are around 5° warmer than at night. Rainfall is light, with maximum rains from October to January and very little rain the remainder of the year. Best traveling time: November to May.

Monetary unit: Dutch currency.

Principal city: *Willemstad*.

Entry requirements: Passport, health certificate, smallpox vaccination, police certificate, 4 photographs.

Airlines: KLM, PAA (Both to Willemstad).

Steamships: To Willemstad: Alcoa (Amer), Grace Lines (Amer), Holland-American (Dutch), Royal Mail Lines, Ltd. (Brit), Royal Netherlands (Dutch).

Hotels: Willemstad: Americano.

Colorful celebrations at Queen's Birthday (August 31). West of Curaçao lies the island of Aruba, eastward Bonaire; these "ABC" islands form the Dutch West Indies.

Dominican Republic

Hot on the coast, it is cooler inland but with no more than 8° difference in mean monthly temperatures from winter to summer. January averages about 74, August around 81. Summer days are in the high 80's, the nights 10 to 15 cooler, particularly in higher elevations. Rainfall varies from light in southwest to heavy on northern coast, the heaviest rains coming from May to November. The dry season is from December to April, the best traveling time.

Monetary unit: U.S. dollar. Coins used: peso (1, ½); centavo (25, 10, 5, 1). One peso equals 100 centavos. U.S. money is used more than Dominican, is equal in size, denomination, and value.

Principal cities: *Ciudad Trujillo*, Santiago.

Entry requirements: Passport, visa, con-

sular endorsement, health certificate, smallpox vaccination, 5 photographs.

Airlines: KLM, PAA, TACA (All to Ciudad Trujillo).

Steamships: To Ciudad Trujillo: Alcoa (Amer), Bull Lines (Amer), Lykes Line (Amer), Porto Rico Line (Amer), Suwannee Fruit & Steamship Co. (Amer).

Hotels: Ciudad Trujillo: Colon, Fausto, Frances, Jaragua, Presidente, Santiago: Frances, Garibaldi, Gran Hotel Mercedes, Santiago, Sevilla.

Carnival immediately preceding Lent at Ciudad Trujillo and particularly interesting at Santiago. All villages have special fiestas honoring patron saints.

Guadeloupe

Warm and humid, with temperature rising from 74 in January to only 76 as an August average. Daily variation is slight, and at Camp Jacob, elevation 1750 feet, it is about 6° cooler throughout the year. Rainfall is extremely heavy, 90 to 150 inches, with heaviest rains from June to December. Best traveling time: December to May.

Monetary unit: French currency.

Principal cities: *Basse Terre*, Point-à-Pitre.

Entry requirements: Passport, visa, consular endorsement, round-trip tickets or transportation to country beyond granting entry.

Airlines: PAA (Point-à-Pitre).

Steamships: To Point-à-Pitre: Alcoa (Amer), Canadian National SS Co. (Brit).

Hotels: Point-à-Pitre: Des Antilles.

Haiti

The coastal areas are hot, the inland regions cooler with nights sometimes cold in the mountains. Port-au-Prince has an average temperature of 81. From April to June and from September to November, the rains come. The dry season, from December to March is cooler and the best traveling time.

Monetary unit: gourde. Coins used: gourde; centimes (50, 20, 10, 5, 3, 2, 1). One gourde equals 100 centimes. United States currency is used extensively.

Principal city: *Port-au-Prince*.

Entry requirements: Passport and Transit (maximum stay three days) or Tourist (maximum stay thirty days) visa.

Airlines: KLM, PAA (Both to Port-au-Prince).

Steamships: To Port-au-Prince: Alcoa (Amer), Lykes Lines (Amer), Royal Mail Lines, Ltd. (Brit), Royal Netherlands (Dutch), Standard Fruit (Amer).

Hotels: Port-au-Prince: Grand Hotel

Olofsson, La Citadelle, Sans Souci, Splendid.

Carnival for three days preceding Lent offers gayest, most picturesque celebrations. All villages have special localized fiestas of colorful interest. Cockfighting is popular, almost all towns having pits, with fights given Saturdays and Sundays.

Jamaica

Warm, swept by trade winds. The daily temperature variations are approximately 10 to 15, with the January average 76 in Kingston, July's average being 82. In higher elevations the weather is cooler, Hill Gardens averaging 59 in January, 65 in July. Rainfall is strikingly uneven, ranging from light at Kingston (32 inches annually) to extremely heavy at Mooretown (222 inches annually) only thirty miles away. October and November are the rainiest months; January to March the driest. Best traveling time: December to May.

Monetary unit: British currency.

Principal city: *Kingston*.

Entry requirements: Passport. If arriving from Mexico, Central and South America, Cuba, Haiti, or Dominican Republic, visitors must show recent smallpox vaccination, submit to vaccination, or remain in quarantine fourteen days.

Airlines: KLM, PAA (Both to Kingston).

Steamships: To Kingston: Alcoa (Amer), Fyffes Lines (Brit), Canadian National (Brit), Holland-America (Dutch), Pacific Steam Navigation Co. (Brit), Royal Mail Lines, Ltd. (Brit), Standard Fruit (Amer), United Fruit (Amer), New Zealand Shipping Co. (Brit).

Hotels: Kingston: Grenville, Manor House, Myrtle Bank, South Camp Road.

Easter racing carnival at Knutsford Park is colorful, as are the pre-Christmas week festivities. Bathing, boating, fishing splendid.

Martinique

Warm and humid, with January averaging around 76 in Fort de France, 80 from June to November. Daily variation is about 15°. At Morne des Cadets, elevation 1676 feet, temperatures are about 5° cooler all year. Rainfall is heavy in the lowlands, extremely heavy in higher elevations, with August and September the wettest months. Best traveling time: December to May.

Monetary unit: French currency.

Principal city: *Fort de France*.

Entry requirements: Passport, visa, consular endorsement, round-trip transportation or transportation to country beyond granting entry.

Airlines: PAA (Fort de France).

Steamships: To Fort de France: Alcoa (Amer), Canadian National (Brit).

Hotels: Fort de France: de l'Europe, de la Paix.

Puerto Rico

With a coastal temperature average of 73 in winter, 76 in summer, the climate is pleasant the entire year. While the interior and higher altitudes are cooler, there are no extremes in temperatures. Rainfall is heavy but intermittent, some showers lasting only fifteen minutes, with December and January the wettest months. Travel is comfortable the year through, although the major tourist season is December to April.

Monetary unit: Same as United States.

Principal cities: Mayaguez, Ponce, Rio Piedras (suburb of San Juan), Santurce (suburb of San Juan), *San Juan*.

Entry requirements: For U.S. citizens, none.

Airlines: PAA (San Juan).

Steamships: To Mayaguez: American Hawaiian (Amer), Bull Line (Amer), Lykes Lines (Amer), Moore-McCormack Lines (Amer), Porto Rico Line (Amer), Pope and Talbot Line (Amer), Waterman Line (Amer). To Ponce: Same as Mayaguez except for American Hawaiian. To San Juan: Same as Mayaguez.

Hotels: Mayaguez: Cocoanut Grove, Morreda, Palma. Ponce: Belgica, Mella. San Juan: Bellevue, Condado, Escambron Beach Club, Geronimo, Normandie, Palace.

Carnival celebrations preceding Lent. American holidays, such as Washington's Birthday, Fourth of July, and Thanksgiving, are observed. Horse racing at tracks near San Juan; cockfights in island's largest pit at nearby Gallera Borinquen. The Caribbean National Forest is approximately one and a half hours by car from San Juan. The beautiful area has numerous trails for hiking, a dance hall, restaurant, overnight accommodations.

Trinidad and Tobago

Hot and humid. The January temperatures average 77, the September temperatures 80. Throughout the year, night temperatures drop 6° to 10°. Coldest recording known to Trinidad is 56, the hottest 101. Rainfall is moderate to heavy, with February receiving the least, July or August the most. Best traveling time: November to May.

Monetary unit: British currency.

Principal city: *Port of Spain*.

Entry requirements: Passport, smallpox vaccination.

Airlines: KLM, PAA, TACA (All to Port of Spain).

Steamships: To Port of Spain: Alcoa (Amer), Canadian National (Brit), Moore-

McCormack (Amer), Royal Netherlands (Dutch).

Hotels: Port of Spain: de Paris, Hall, New Harbour, Queen's Park. On Tobago: Robinson Crusoe Hotel.

Discovery Day celebrated August 5. The Calypso Fiesta is held in Port of Spain, where songs and dances are rehearsed for the Carnival, two days preceding Lent. Beginning in March and lasting until May, the Hoesin Festival is held, a Moslem celebration. Trinidad has many Mohammedans. Empire Day (May 24) and other British holidays are observed.

Leeward Islands

Temperatures average about 76 in January with about 6° variation between day and night temperatures. August averages 81, with the same daily variations. Winds prevail from the east, varying from ten miles per hour in July to about five in October. Rainfall is moderate in most of the islands, heavy in some localities, with September to November rainiest, February to March receiving minimum precipitations. Best traveling time: December to May.

Monetary unit: British currency.

Principal islands: Antigua, Barbuda, Redonda, St. Kitts, Nevis, Anguilla, Montserrat, British Virgin Islands.

Entry requirements: Passport.

Airlines: PAA (Antigua).

Steamships: To Antigua, St. Kitts, Montserrat: Alcoa (Amer), Canadian National (Brit), Furness Line (Brit), Harrison (Brit).

Hotels: Antigua: Antigua Beach, Globe, Kensington. St. Kitts: Shorty's. Nevis: Bath House.

Albania

Favorable Mediterranean climate. Winters cool along coast with average temperatures in the 50's; cooler inland in higher elevations. Summers warm, in the 70's and 80's. Light rainfall, with driest months in summer. Best traveling time: May to September.

Monetary unit: franca air (gold franc). Coins used: franca air (100, 20, 10, 5, 2, 1); lek (1, $\frac{1}{2}$, $\frac{1}{4}$); quindar (10, 5, 2, 1). One franca air equals 5 lek; one lek equals 40 quindar.

Principal cities: *Tirana*, Shkoder.

No hotel information available at present.

Carnival Sunday, preceding Lent, people masquerade in costumes. Easter continues

Virgin Islands

Warm, humid climate, with winter temperatures averaging about 6° cooler than summer. In January, the days average 82, the nights 72; in August, days average 88, nights 78. Infrequently, temperatures rise to the 90's, drop to the 60's. The rainfall is moderate, around 40 to 50 inches annually, with the heaviest rains September to November. Best traveling time: December to May.

Monetary unit: U.S. currency.

Principal islands: St. Croix, St. John, St. Thomas.

Entry requirements: None for U.S. citizens.

Airlines: PAA (St. Thomas).

Steamships: To St. Croix, St. John, St. Thomas: Alcoa (Amer), Canadian National (Brit), Furness (Brit), Royal Netherlands SS Co. (Dutch).

Hotels: St. Thomas: Bluebeard's Castle, Grand, Taylor's "1829."

Windward Islands

Extremely equable climate. January temperatures average 77, September 80, with a 6° daily variation. The extreme temperatures on record are 93 and 60. Rainfall is heavy to extremely heavy, with maximum rains June to November. Best traveling time: December to May.

Monetary unit: British currency.

Principal islands: Dominica, Grenada, St. Lucia, St. Vincent, plus small group known as Grenadines.

Entry requirements: Passport.

Airlines: PAA (St. Lucia).

Steamships: To all islands: Alcoa (Amer), Canadian National (Brit), Furness (Brit), Harrison (Brit).

Hotels: Dominica: Cherry Lodge.

EUROPE

for three days. In villages, boys light bonfires on mountains in early morn, December 24.

Andorra

Extremely cold winters, with passes closed during winter months. Summers cool, cold in highest altitudes. Very light rainfall. Best traveling time: June to September.

Monetary unit: Spanish peseta, but French franc used extensively.

Principal city: *Andorra*.

Entry requirements: French or Spanish visa.

The tiny, independent republic has only two roads, no railroads. In summertime only, local busses connect with pass at

Spanish border, more easily accessible than French side. The chief occupations are agriculture and smuggling. August 3, the Festa Major is held in capital in native costumes.

Austria—(see Germany)

Belgium

Cold winters (temperatures sometimes as low as 15 or 20) and mild summers with some days in the 80's. Weather the year around is warmer along the coast than inland. Rainfall is light on the coast, moderate inland, with rainiest months in late summer and fall. Best traveling time: May to August.

Monetary unit: franc (with belga in foreign transactions). Coins used: franc (50, 20, 5, 1); centimes (50, 25, 10, 5). One franc equals 100 centimes; five francs equal one belga.

Principal cities: Antwerp, Borgerhout, Bruges, Brussels, Ghent, Liege, Ostend, Schaerbeek, Seraing, Uccle.

Entry requirements: Passport and visa.

Airlines: ABA, KLM (Brussels via Amsterdam), PAA (Brussels), Sabena, Air France (Brussels via Paris).

Steamships: To Antwerp: Black Diamond (Amer), Belgian Line (Belg), Bernstein Line (Amer), Fjell Line (Norweg), Holland-America (Dutch), Inter-ocean (Norweg), Isbrandtsen (Amer), Johnson (Swed), Lykes Lines (Amer), Oranje (Dutch), United States Lines (Amer), Waterman (Amer).

Hotels: Antwerp: Century, Grand, de Londres, Atlanta, Bedford, Georges, Scheers, Splendid. Brussels: Albert Ier, Astoria, Metropole, Plaza. Liege: De Suede. Ostend: De La Easter Plage, Grand Osborn, Littoral, Majestic-Palace.

American Express Offices: Antwerp: 87 Place de Meir. Brussels: 51 Rue Cantersteen.

Throughout Belgium, on three days preceding Ash Wednesday, the Carnival is held, the most picturesque festivities being at Binche. The first Monday after May 1, at Bruges, is the procession of the Holy Blood (of Christ, brought in a vial from the Holy Land during the Crusades), a devout parade in various religious costumes. The houses are decorated with tapestries and flags. On the last Sunday in July at Veurne (Furnes), the Procession of the Penitents is held, in which robed, hooded figures in black sackcloth carry heavy crosses, honoring a piece of the True Cross. August 15, at Ghent, the international boat races are held on the canal to Terneuzen, Holland. On November 3, at St. Hubert, the annual deer hunt is opened with market place ceremonies in medieval costumes honoring the village namesake. December 6 is the gift-giving Feast of St.

Nicholas, December 25 being observed as a religious holiday. International Industries Fair in Brussels during May.

Bulgaria

Winters are cold for this latitude, the January average in Sofia being 28°, with some periods around zero. Summers mild, July temperatures in Sofia averaging 69°, with daytimes in the 70's or 80's. Climate in coastal areas and lower elevations warmer. January is the coldest month, July the hottest. Light rainfall, with heaviest rains in winter near the coast; in summer and fall, farther inland. Best traveling time: May to September.

Monetary unit: lev. Coins used: lev (100, 50, 20, 10, 5, 2, 1); stotinki (50). One lev equals 100 stotinki.

Principal cities: Plovdiv, Sofia, Varna.

Entry requirements: Passport and visa.

Hotels: Sofia: Grand Bulgarie, Slavianska-Bessedia.

Folk dances, parades, picnics celebrate Independence Day, March 3.

Czechoslovakia

Winters are cold, with January and February averages about 30°. Summers are mild, with average temperatures in the 60's, daytimes in the 70's or above. January is the coldest month, July the warmest. Very light rainfall, with maximum rains from May to August, which is, however, the best traveling time.

Monetary unit: koruna (or korona). Coins used: koruna (20, 10, 5, 1); hellere (50, 25, 20, 10, 5). One koruna equals 100 hellere.

Principal cities: Prague, Pressburg.

Entry requirements: Passport and visa.

Airlines: ABA, KLM, PAA (Prague), Air France, Czech Air Lines, Swiss Air.

Hotels: Prague: Alcron, Ambassador, Esplanade, Sroubek.

On St. John's Eve, June 23, young folk dress gaily, light bonfires on hilltops, and dance around fires. International Ski Tournament in High Tatra mountains during February. Excelsior, Grand, Santa Lucia were severely damaged. Palermo: Excelsior, Grand des Palmes, Villa Ignea. Rome: Ambassador, Excelsior, Flora, Grand, Ludovisi, Quirinal, Savoy. Venice: Britannia, Europa, Grand, Royal Danieli, d'Italie Bauer-Grunwald.

American Express Offices: Florence: Via Tornabuoni 10. Milan: 41 Bis Via Manzoni. Naples: Piazza dei Martiri 23. Rome: Piazza di Spagna No. 38.

Throughout Italy, Carnival is held from January 17 to Ash Wednesday. St. Joseph's Day, March 19, a day of feasting, is widely observed. Modena, on April 30, celebrates the annual festival Maytime of the Maidens. Festival of the Palio in Siena, July 2, has picturesque horse race as chief event with medieval costumes, banners, processions. On July 16, Festival of the Madonna of Carmine is celebrated with dances, fireworks, revelry, particularly at Naples. Small villages celebrate Festival of the Immaculate Conception on December 8, the most elaborate ceremonials taking place at Bagnoli Irpino. In the Tyrrhenian Sea, approximately 150 miles across from Rome, lies the island of Corsica, whose capital, Ajaccio, is Napoleon's birthplace. Seven miles south of Corsica is the Italian island of Sardinia, whose capital is Cagliari. Just off Italy's southern extremity is the island of Sicily, whose chief cities are Catania, Girgenti, Messina, and Palermo. In east central Italy, south of Rimini, is the independent republic of SAN MARINO whose capital, San Marino, has a population of 2000.

Latvia—(See Estonia)

Liechtenstein

Winters are cold, with extremely cold temperatures in higher altitudes. Mild summers in lowlands, cooler in higher ranges. Moderate to heavy rainfall. January is the coldest month, July the warmest. Best traveling time: May to September.

Monetary unit: franc. Swiss currency is used.

Principal city: Vaduz.

Entry requirements: Passport and visa (issued by Swiss Consulate).

Only railway in Liechtenstein is at Schaan, 3 miles from Vaduz. The one hotel in Vaduz is the Wald.

Lithuania—(See Estonia)

Luxembourg

Cold winters, mild summers, with some summer days warm or hot and some winter weather below 20. Light rainfall, mainly from May to October. Best traveling time: May to September.

Monetary unit: Although Luxembourg has its own currency at the rate of one Luxembourg franc to 1.25 Belgian francs, Belgian currency is extensively used.

Principal city: Luxembourg.

Entry requirements: Passport and visa.

Hotel: Luxembourg: Grand Brasseur.

Monaco

Cool winters, warm summers, with frequent hot summer days and moderate annual rainfall. Best traveling time: September to May.

Monetary unit: franc. Coins used: franc (100, 2, 1); centime (50). One franc equals 100 centimes. French currency is used extensively.

Principal cities: Monaco, Monte Carlo.

Entry requirements: Passport and French visa, then Monacoan visa.

Hotels: Monaco, Monte Carlo: D'Albion, Des Palmiers, De Paris, Hermitage, Metropole, Monte Carlo Palace, New Beach.

The gambling casino at Monte Carlo is internationally famous and the peak season is the winter.

The Netherlands

Cold winters and mild summers, with summer days sometimes in the 80's and winter temperatures seldom below 20. Light rainfall, the late summer and fall being the rainiest season. Climate is warmer along the coast than inland. Best traveling time: May to September.

Monetary unit: florin (or guilder). Coins used: florin (2½, 1); cent (50, 25, 10, 5, 2½, 1). One florin (or guilder) equals 100 cents.

Principal cities: Amsterdam, Rotterdam, The Hague.

Entry requirements: Passport and visa.

Airlines: ABA, AOA (Amsterdam), DDL, KLM (Amsterdam), Air France (Amsterdam via Paris), Swiss Air.

Steamships: To Rotterdam: Holland America (Dutch), Lykes Lines (Amer), United States Lines (Amer), Waterman (Amer), Black Diamond (Amer), South Atlantic Steamship Co. (Amer), Fjell Line

(Norweg), Interocean Line (Norweg), Isbrandtsen Co. (Amer), Oranje Line (Dutch).

Hotels: Amsterdam: Amstel, Centraal, Doelen, Krasnapolsky, Pays-Bas, Roode Leeuw, Park. Rotterdam: Hotels Weimar, Coomans, Zuid-Hollandsch, Mass destroyed. Hotels Atlanta, Park, Regina and Royal limited. The Hague: du Passage, Grand Hotel Central, Terminus.

American Express Offices: Amsterdam: Warmoesstraat 197/199 Damsquare. Rotterdam: 120 Meent. Enschede: Markt 5. The Hague: Plaats 31.

At fishing village of Marken on the Zuider Zee, natives dress on Sundays in costumes. Birthday of Princess Juliana, celebrated April 30.

Northern Ireland and Eire

Cool winters (average about 42) with some cold weather, especially in Northern Ireland, with January the coldest month. Summers cool (average about 58), some days mild or warm, with July and August warmest months. Light rainfall in eastern sections, moderate in west, with most rain in late summer to midwinter. Best traveling time: May to September.

Monetary unit: In Northern Ireland, British pound; in Eire, the Irish pound (also called the Saorstat pound). Coins used in Eire: half crown (2½ shillings); florin (2 shillings); shilling; penny (6, 3, 1, ½), farthing. One Irish pound equals 20 shillings; one shilling equals 12 pence; One penny equals 4 farthings.

Principal cities: Belfast, Cork (Eire), Dublin (Eire), Londonderry, Limerick (Eire).

Entry requirements: Passport and visa. (Visa for Northern Ireland issued by British Consul).

Airlines: AOA (Shannon, Eire), PAA (Shannon), TWA (Shannon), Irish Air Lines.

Steamships: To Belfast: Anchor Line (Brit), Canadian Pacific (Brit), Cunard-White Star Line (Brit). To Cobh: Cunard-White Star, United States Lines (Amer). To Dublin: Blue Star Line (Brit), Cunard-White Star, Irish Shipping, Ltd. (Irish), United States Lines. To Londonderry: Anchor Line.

Hotels: Belfast: Eglinton and Winton, Grand Central, Imperial, Midland Station, Royal Avenue. Dublin: Central, Gresham, Jury's, Royal Hibernian, Shelbourne.

In Northern Ireland is the Giant's Causeway, strange rock forest of 40,000 pillars still inexplicable to geologists. Near Belfast is Lough Neagh, largest lake in British Isles. In Eire, the "Feis Ceoil" (Music Festival) is held in May. The Dublin Horse Show is held in August and the Puck Fair at Killorglin is held the same month.

Norway

Cold winters averaging in the 20's, more moderate along coast than inland (Bergen's coldest day: 5; Oslo's: -26). Coldest months February. Summers are cool, warmest in southeastern section (July average in Oslo: 60). Summer days are sometimes in the 70's. Gales are frequent on the west coast, three to four per month in winter, with December and January the stormiest; two to three per month in summer. There is much snow in northern Norway, sometimes even in the summer. Extremely heavy rainfall on coast near Bergen, light rainfall inland. The heaviest rains occur from September to January. Long summer days; no real darkness even in southern Norway from late April until mid-August. Best traveling time: May to September.

Monetary unit: krone. Coins used: krone; ore (50, 25, 10, 5, 2, 1). One krone equals 100 ore.

Principal cities: Bergen, Oslo, Stavanger, Trondheim.

Entry requirements: Passport and visa.

Airlines: ABA, AOA (Oslo), BOAC (Oslo via London), Scandinaur (Oslo), Norwegian Air Lines.

Steamships: To Oslo: American Scantic (Amer), Scandinavian American (Danish), Norwegian American Line (Norweg), United States Lines (Amer).

Hotels: Bergen: Bristol, Norge, Terminus. Oslo: Continental, Grand, Bristol.

St. John's Eve, June 23, is celebrated with festivities, bonfires, and folk dances. International regatta at Hankoe during summer. National winter sports events near Oslo in February. Easter is a five-day national holiday; most people going to mountains for best skiing, sledding; outdoor church services. The last weeks in May, the return of the whaling fleet is celebrated in Norwegian whaling centers of Sandefjord, Tonsberg, and Larvik with pageants, dances, festivities. Sun festivals are held in northern Norway when sun first appears after winter darkness. Valley villages farther south, such as Rjukan, Odda, and Høyanger hold special celebrations at these times.

Poland

Winters are cold, with December, January, and February averages at Warsaw about 25 or 28 and some days below zero. Summers are mild, averaging about 65, with daytime temperatures in the 70's, sometimes higher. Light rainfall, with May to October heaviest season. Best traveling time: May to October.

Monetary unit: zloty. Coins used: zloty (10, 5, 2, 1); grosz (50, 20, 10, 5, 2, 1). One zloty equals 100 groszy.

Principal cities: Bialystok, Bromberg,

Czestochowa, Gdynia, Katowice, Krakow, Lodz, Lublin, Lwow, Posen, Sosnowiec, Warsaw, Wilno.

Entry requirements: Passport and visa.

Airlines: ABA.

Steamships: To Gdynia: American Scantic Line (Amer), Scandinavian American Line (Danish).

Hotels: Warsaw: Bristol, Europejski, Polonia Palace.

Religious pilgrimages to Czestochowa reach a peak on July 16, the Feast of Our Lady of the Scapular, and the festival ends August 15 with the Feast of the Assumption of our Blessed Lady.

Portugal

Climate is equable and temperate, with average winter temperatures in the 50's, summers in the 70's or 80's, and the daily variation never exceeding 23 degrees. Deep valleys, sheltered from cool winds, are excessively hot in summer. In mountains, temperature declines with increasing altitudes. Rainfall light in the south, moderate in the north. Heavy fogs are common along the coast. Best traveling time: May to September.

Monetary unit: escudo. Coins used: escudo (10, 5, 2½, 1); centavo (50, 20, 10, 5). One escudo equals 100 centavos.

Principal cities: Barcelos, Braga, Coimbra, Guimaraes, Leiria, Lisbon, Porto, Vizeu.

Entry requirements: Passport and visa.

Airlines: ABA, BOAC (Lisbon), KLM, PAA (Lisbon), TWA (Lisbon), British South American Airways, Ltd., Panair do Brasil, Swiss Air.

Steamships: To Lisbon: American Export Line (Amer), Blue Star Line (Brit), Booth Line (Brit), Royal Mail Lines (Brit), Spanish Line (Spanish), Wilhelmsen Line (Norweg), Yeoward Line (Brit), Elwell Line (Amer), Flomarcy Co. (Port).

Hotels: Lisbon: Avenida Palace, Aviz Victoria.

For three days preceding Ash Wednesday, Carnival is held amid much festivity.

Rumania

Winters are cold (January average in Bucharest is 26°) with occasional below-zero weather. Summers are warm with daytime temperatures in the 80's, and sometimes 90's. Coldest month is January; warmest, July. Light rainfall, early summer being the wettest season. Best traveling time: May to September.

Monetary unit: leu (plural: lei). Coins used: leu (250, 200, 100, 50, 20, 10, 5, 2, 1); bani (50, 25). One leu equals 100 bani.

Principal cities: Bucharest, Galati, Iasi.

Entry requirements: Passport and visa.

Hotels: Bucharest: Athnee Palace, du Boulevard, Splendid Park, Stanesco.

Easter is celebrated for three days.

Scotland—(See England)

Spain

Average winter temperatures in most areas of Spain are in the 40's and, in the southern section, the 50's. Summers are coolest in the north and northwest (in the 60's), average temperatures in other areas being in the 70's or, in southern Spain, the 80's. The winter season lasts nine months in higher elevations of the interior and is as short as two months in the lowlands. In the south there is practically no winter season. Rainfall is light to moderate in the north and northwest and fairly well distributed throughout the year; very light in other areas, resulting in arid sections in the south and southeast. Best traveling time: May to September.

Monetary unit: peseta. Coins used: peseta (25, 20, 10, 5, 2, 1); centimo (50, 25, 20, 10, 5, 2, 1). One peseta equals 100 centimos.

Principal cities: Albacete, Alicante, Almeria, Barcelona, Bilbao, Burgos, Cadiz, Cordoba, Gijon, Granada, Jerez de la Frontera, La Coruna, La Linea, Lorca, Madrid, Malaga, Murcia, Palma, Salamanca, Santander, Seville, Valencia, Valladolid, Zaragoza, San Sebastian (resort town).

Entry requirements: Passport and visa. All communications concerning visa authorization must be paid for by applicant if traveler intends remaining more than seven days. Supply names and addresses of two persons in Spain if intending to be in country more than one week.

Airlines: KLM, TWA (Madrid).

Steamships: To Barcelona: American Export Lines (Amer), Gardiaz Lines (Span), Kerr Steamship Co. (Brit). To Bilbao: Kerr Steamship Co., Spanish Line (Span). To Cadiz: Gardiaz Lines, Kerr Steamship Co., Spanish Line. To Coruna: Spanish Line. To Gijon: Kerr Steamship Co. To Seville: Kerr Steamship Co., Spanish Line.

Hotels: Barcelona: Continental, Majestic, Oriente, Principe, Ritz. Bilbao: Carlton. Granada: Alhambra Palace. Madrid: Felipe II, Londres, Nacional, Nueva York, Palace, Paris, Ritz, Victoria. Malaga: Miramar, Niza. Palma: Alhambra, Formentor, Mediterraneo. San Sebastian: Arana, Biarritz, Continental Palace, De Londres, Maria Cristina, Principe. Seville: Andalucia Palace, Madrid. Valencia: Alhambra, Imperio, Metropol, Regina.

For three days, preceding Ash Wednesday, the Carnival holds full sway. The Thursday after Trinity Sunday, Corpus Christi is celebrated with magnificent

pageantry and the processions, with candles, flowers, and banners, make it one of the most impressive religious events of the year. St. John's Eve, June 23, is traditionally observed with bonfires, particularly in villages. From Easter Sunday on, bull fights are held in all important towns, the best being in spring and autumn at Madrid, Seville (during festivities), Salamanca (during festivities), Valencia, and Saragossa. In the summer, bull fights at San Sebastian and Bilbao are outstanding. In Seville, the Burial of the Sardine is carried out on Ash Wednesday with ceremonial pomp. In Madrid, the Day of St. Anthony, January 17, horses and animals are dressed in flowers and ribbons, driven to Church of San Antonio while bystanders watch the procession. For the Burial of the Sardine, throngs go to the banks of the Manzanares River for the ceremony. The Day of St. Isidore the Ploughman is celebrated on May 15 in Madrid with tapestries on balconies, banners, music, and *pelota* games. In Valencia, the Feast of St. Joseph is celebrated on March 19 with much splendor.

Sweden

With its northern extremity in the Arctic Circle, Sweden's winters are cold in the south and extremely cold in the north. Temperatures in the north drop to -45° , and are often below zero throughout the country. Summers are mild in the south, cool in the north, with some summer days reaching the 70's or 80's. February is the coldest month, July the warmest. The summers are short, the ice breaking up in May or June and re-forming in October. The rainfall is light, with the rainy season in late summer. The sun is continuously above the horizon in the northern part of the country from the end of May until mid-July. Best traveling time: May to August.

Monetary unit: krona. Coins used: krona (20, 10, 5, 2, 1); ore (50, 25, 10, 5, 2, 1). One krona equals 100 ore.

Principal cities: Gothenburg, Malmo, Stockholm.

Entry requirements: Passport and visa.

Airlines: ABA, AOA (Stockholm), BOAC (Stockholm via London), DDL, KLM (Stockholm, Malmo via Amsterdam), Sabena, Scandinavian (Stockholm), Air France (Stockholm via Paris), Royal Norwegian Airlines, Swiss Air.

Steamships: To Gothenburg: American Scantic (Amer), Swedish American (Swed), Johnson Line (Swed), Lykes Line (Amer). To Malmo: Same except for Lykes. To Stockholm: Same as Gothenburg.

Hotels: Gothenburg: Grand Haglund, Eggers. Malmo: Savoy. Stockholm: Carlton, Continental, Gillet, Grand Royal.

American Express Office: Stockholm: 11 Smalandsgatan.

April 30, the Feast of St. Walpurgis symbolizes the end of winter, and students in old university centers such as Stockholm, Upsala, and Lund celebrate. In the evening, bonfires are lighted and folk dancing begins in village squares, the merrymaking continuing until May 1, a holiday. June 6 is Swedish Flag Day, with patriotic rallies in the Stockholm stadium, where the King presents flags to various organizations. On June 23, lightest day of the year, most towns and villages erect garland-decked poles and carry on festivities late into the night. December 13 is St. Lucia's Day, marking the beginning of the Christmas season. Local governments sponsor night pageants through the streets, followed by charity balls.

Switzerland

Wide variations in temperature and rainfall due to differences in elevation. Winter temperatures in high altitudes average about 15 to 20, with some below-zero weather. In lower altitudes, temperatures average about 30. Summer temperatures in high altitudes average 45 to 55; in lowlands about 65 with warm, sometimes hot, days. In the highest elevations (St. Theodale Pass, 10,899 feet) winter conditions are practically continuous throughout the year. In the lower regions (Lago Maggiore, for example) winter lasts only three months. January is the coldest month. The variation in rainfall (light in Basle, Berne; extremely heavy at Santis) is largely determined by mountainous conformation. The greatest rainfall occurs between April and October, yet this is the best traveling time because it is warmest.

Monetary unit: Swiss franc. Coins used, franc (100, 20, 10, 5, 2, 1); centime (50, 20, 10, 5, 2, 1, ½).

Principal cities: Basle, Berne, Geneva, Interlaken, Lausanne, Lucerne, St. Gallens, St. Moritz, Zurich.

Entry requirements: Passport and visa.

Airlines: ABA, KLM (Zurich, Geneva via Amsterdam), TWA (Geneva), Air France (Zurich, Geneva via Paris), Czech Air Lines, Swiss Air Lines.

Hotels: Basle: Central, Euler, Hefer, Three Kings, Vegt, Victoria. Berne: Baren, Bellevue-Palace, Bristol, Schweitzerhof. Geneva: Beau Rivage, Cornavin, De Russie, Des Bergues, La Residence, Richmond. Interlaken: du Lac, Interlaken-Interlaknerhof, Jura. Lausanne: Lausanna-Palace, Beau-Rivage, Central. Lucerne: des Balances, Grand National, Monopole, Montana, Schweizerhof Wildennann. St. Gallens: Hecht, Walhalla-Terminus. St. Moritz: Neues Post Hotel. Zurich: Baur au Lac, Central, Dolder Grand, Eden au Lac, Savoy.

American Express Offices: Basle: Markt-gasse 5. Geneva: 7 Rue du Mont Blanc. Lucerne: Schweizerhofqual 4. Zurich: Sihlporteplatz 3.

Independence Day, August 1, is celebrated with fireworks and festivities nationally. All other holidays, of which there are many, are celebrated locally, even such days as Good Friday. All cantons hold a Carnival some time before Lent. Near Lucerne, on the Friday after Ascension, the people of Uri make a pilgrimage to William Tell's shrine at near-by Tellsplatte, on Lake Lucerne's southern shore. In Zurich, the Six O'Clock Ringing Feast, a picturesque festival during April, celebrates the end of winter. In October, at Thun, an annual shooting festival is conducted in medieval costumes. In some cantons, Christmas begins on December 6. Skiing, sledding, winter sports commence December 25. Swiss Industries Fair at Basle in May. Summer ski meet on the Jungfrauoch.

Wales—(See England)

Union of Soviet Socialist Republics

The northern tundra has cold winters, cool summers with an average July temperature of less than 56. Although the surface thaws for a month or two in summer, the ground below remains permanently frozen. Precipitation is low, but the air is damp and raw. The extensive belt south of this area, and central Russia generally, has much winter snow and no season is without precipitation. The temperature is rarely above freezing in winter, the summer average in July being 50. In east Russia and western Siberia winters are extremely cold, with a January average of 10 in the west and —15° in the east. West of the Urals rainfall is 20 inches annually, only 8 to 16 inches in the east; the northern section has less rain than the south.

Moscow has an average daily high of 71 during July, the warmest month, and during January, coldest month, the average daily high is about 14, with 5 as the average daily low. Central Siberia has the worst winters in the world. On Russia's northeast coasts the summers are damp, cloudy, and cool, with fog and drizzle. The winters are warmer than inland, but there are constant northwest winds. The Amur basin has heavy summer rain, and the winters are less agreeable than the far interior of Siberia owing to the strong, cutting winds. In the steppes the rain is light, the summers dry and hot, most rain falling during spring and early summer. Toward the southeast, annual rainfall is less than 8 inches. The winters are cold for this latitude with average temperatures below freezing except in the far south. The summers are hot with the July average

about 80°. Southern Crimea has mild, rainy winters and hot summers; winter temperatures, as an average, above freezing. Along the eastern shores of the Black Sea the rain is excessive all year. The Caucasian area is typical of mountainous regions and south of here the winters are severe, the summers hot. Best traveling time: May to September.

Monetary unit: Gold chervonetz. Coins used: rouble; kopecks (50, 20, 15, 10, 5, 3, 2, 1). One rouble equals 100 kopecks.

Principal cities: Archangel, Astrakhan, Baku, Cernauti, Chisinau, Chkalovsk, Dnepropetrovsk, Gomel, Gorki, Gorlovka, Grozni, Izhevsk, Ivanovo, Kalin, Kazan, Kerch, Kharkov, Kiev, Kirov, Kostroma, Krasnodar, Krivoirog, Kuibyshev (Samara), Kursk, Leningrad, Magnitogorsk, Makeevka, Mariupol, Minsk, Moscow, Murmansk, Nikolaev, Nizhni Tagil, Odessa, Ordzhonikidze, Orel, Penza, Poltava, Rostov, Rybinsk, Saratov, Sevastopol, Shakhty, Simferopol, Smolensk, Stalin, Stalingrad, Taganrog, Tambov, Tiflis, Tula, Ufa, Ulyanovsk, Vitebsk, Voronezh, Voroshilovgrad, Yaroslavl, Yerevan, Zaporozhe.

Entry requirements: Passport and visa.

Steamships: To Leningrad: American

Scantic Line (Amer). To Odessa: American Export Lines (Amer).

Yugoslavia

Along the coast, winters are mild (January average at Ragusa, 48°) but subject to a cold dry wind from the mountains. Inland temperatures are colder, averaging about 30° in Belgrade and Skopje (Uskub) and extremely cold in higher elevations. Summer temperatures average in the 70's, with frequent daytime averages of 80°. It is warmer along the coast than inland. Rainfall is moderate on coast, light inland, with heaviest rains from October to January. The coldest month is January; warmest, July. Best traveling time: May to September.

Monetary unit: dinar. Coins used: dinar (50, 20, 10, 2, 1); para (50, 25). One dinar equals 100 paras.

Principal cities: Belgrade, Subotica, Zagreb.

Entry requirements: Passport and visa.

Hotels: Belegarde: Bristol, Roi Serbe. Zagreb: Esplanade, Palace.

Throughout Serbia on June 28 special church services, parades, and athletic carnivals celebrate St. Vitus Day.

AFRICA

Algeria

Along the coast winters are cool, summers warm, with Algiers averaging 55° in January, 77° in July and some temperatures in the 90's, but prevailing northeast winds prevent excessive heat. Light rainfall with most from October to March. On the Shotts plateau, winters are colder with frequent freezing temperatures and severe snowstorms; summer days hot (in the 80's or 90's) and nights about 35° cooler; very light rainfall. In the Sahara region: extremely dry air, never more than 5 inches of rain, in some places none, with January average temperatures as low as 54° at In-Salah, 47° at Ghardaia; summer averages in the 90's. Dust storms are severe and at times make travel impossible. The daily temperature range is about 35°. Best traveling time: October to May.

Monetary unit: French currency.

Principal cities: Algiers, Constantine, Oran.

Entry requirements: Passport, visa (by French consular officer), yellow fever inoculation certificate, five photographs.

Airlines: Air France, Sabena, TWA (Algiers).

Steamships: To Algiers: American Export Lines (Amer), French Line (French), Lykes Lines (Amer), Norton, Lilly Co. (Brit), United States and Levant Line (Amer). To

Oran: American Export Lines, Lykes Lines.

Hotels: Algiers: Albert, Aletti, St. George. Constantine: Cirta, Trans-Atlantique. Oran: Grand.

Mohammed's birthday, termination of the Ramadan Fast and the pilgrimage to Mecca are celebrated respectively February 2, August 17 and October 24 in 1947 and approximately eleven days earlier each succeeding year. During these days family feasting, gay clothing and exchange of gifts are the main features as well as native sports, horsemanship and arms feats. Good Moslems kneel and bow to the ground in prayer five times a day no matter where they happen to be when prayer time arrives and at these times the tourist should neither stare nor take photographs. Travelers should not enter a mosque unless assured it is open to visitors. If invited to a Mohammedan home, eating should be done with the right hand only. Eat sparingly, as the remainder is for the women and children. Coffee or tea, if offered, may be refused but once accepted then the drinking of two or possibly three cups is expected but under no circumstances should a fourth cup be accepted as the third is usually (and the fourth is always) a polite signal to leave. The Moslem day of rest is Friday and most business places are closed. If the traveler intends remaining in a predominantly Mohammedan country for any length of time, it is advisable

to learn through American Express Company representatives, hotel clerks or transportation officials of various local customs and national habits in more complete detail. Throughout the African continent, on a whole, Christian holidays are observed as in Europe and America but with less pageantry.

Angola

At Luanda, daytime temperatures average in the low 80's from November to May; in the high 70's from June to October, with an 8 or 10° drop at night. Rainfall is moderate inland (50 to 60 inches annually) from September to April with a dry spell in January. On the coast, light rain falls mainly from February to April. The Antarctic current cools the coast but causes frequent mists and clouds. Best traveling time: June to October.

Monetary unit: angolar. Coins used: angolar (10, 5, 2½, 1); centavo (50, 20, 10, 5, 2, 1, ½). One angolar equals 100 centavos.

Principal cities: Lobito, *Luanda*, Nova Lisboa.

Entry requirements: Passport, visa (issued by Portuguese consul), smallpox vaccination, typhoid, paratyphoid, yellow fever and typhus inoculation certificates.

Airlines: South African Airways.

Steamships: To Lobito: American West African Line (Norweg), Union Castle (Brit). To Luanda: American West African Line.

Hotels: Lobito: Internacional, Terminus. Luanda: Areas, Central.

Portuguese holidays celebrated are Discovery of Brazil, May 3, Cameos Day, June 10 and Independence Day, December 1. National holiday is celebrated October 4 with carnival-parade and native dances. For Mohammedan holiday information see last paragraph under Algeria.

Anglo-Egyptian Sudan

Summer average temperatures are around 90 with May, June, July the warmest months. January averages are about 70 or 80° (60° at Wadi Halfa in the north). Rainfall ranges from almost none to light, with greatest rain from May to September. During dry season there are severe dust storms. Best traveling time: September to May.

Monetary unit: gold pound. Coins used: pound (1, ½); piastre (20, 10, 5, 2); millième (10, 5, 2, 1, ½). One pound equals 100 piastres; one piastre equals 10 millièmes.

Principal cities: *Khartoum*, Port Sudan.

Entry requirements: Passport and visa (by British consular officer). If originating or having passed through any of the following countries, must be in possession of

yellow fever certificate dated no less than fourteen days or more than two years prior to entry in Sudan: Angola, Belgian Congo, Cameroons, Ethiopia, French Equatorial Africa, French Guinea, French West Africa, Gold Coast, Liberia, Nigeria, Sierra Leone, Uganda.

Airlines: BOAC, Air France.

Steamships: To Port Sudan: Cunard-White Star (Brit), Ellerman, City & Hall (Brit), Henderson Line (Brit), Holland African Line (Dutch), Isthmian Line (Amer), Union Castle (Brit).

Hotels: Khartoum: Gordon, Grand.

British national holidays are observed. For Mohammedan holiday information see last paragraph under Algeria.

Basutoland and Swaziland

Basutoland has extremes of heat and cold, both seasonal and diurnal, with maximum temperature on record 93, minimum 11. The air is dry and bracing; rainfall is heaviest during summer. In Swaziland, the average January temperatures are in the 80's, with July in the 60's. The daily range is about 20° and the inland elevations are cooler. Rainfall is moderate with most in summer months and thunderstorms are frequent. Best traveling time in both protectorates: April to October.

Monetary unit: Same as Union of South Africa.

Principal cities: *Maseru*, (Basuto), *Mbabane* (Swazi).

Entry requirements: Same as Union of South Africa.

Hotels: Maseru: Stephen's. Mbabane: Tavern.

Except for Dingaan's Day, Basutoland observes the same holidays as the Union of South Africa. In addition, Moshoeshoe's Day, March 12, is celebrated in commemoration of recognition of Basutos as British subjects. Swaziland celebrates Union of South Africa holidays but does not observe Union Day. Descended from the Zulus, native Swazis consider themselves superior to Basutos.

Bechuanaland

Hot and dry with 18 to 25 inches of annual rainfall during December to the end of April. The area consists mostly of the Kalahari Desert. Best traveling time: May to August.

Monetary unit: Same as Union of South Africa.

Principal city: *Serowe*.

Entry requirements: Same as Union of South Africa.

There is no hotel at Serowe, probably the largest native town in South Africa and headquarters of the Ba-mangweto tribe, but accommodations may be had at

boarding houses. Licensed hunting is good at the Kgalagadi District game reserve (3,750 square miles) and closed season is from 1 September to last day in February. Holidays celebrated are the same as the Union of South Africa except for Dingaan's Day and Union Day.

Belgian Congo

Afternoon temperatures range about 85 or 90, with the nights 70 or 75. Humidity is high, fogs are frequent, as well as heavy dews. February and March are the warmest months, August the coolest, and there is about 10° variation in average temperatures throughout the year. Rainfall is moderate to heavy with November to April the wettest months. Best traveling time: May to October.

Monetary unit: Congolese franc. Coins used: Belgian.

Principal cities: Coquilhatville, Elizabethville, Leopoldville, Stanleyville.

Entry requirements: Passport, visa (issued by Belgian consul), health certificate, smallpox vaccination certificate, yellow fever inoculation certificate, police certificate. Authorization communication must be obtained, applicant paying expense. Travelers must possess round-trip tickets or transportation to country beyond which will grant entry or else deposit approximately \$380 in U. S. currency.

Airlines: BOAC, PAA (Leopoldville), Sabena, Air France.

Steamships: To Matadi: American West African Line (Norweg).

Hotels: Elizabethville: Bruxelles, Grand, Metropole. Leopoldville: A B C Hotel. Matadi: Compagnie Francaise du Bas-Congo, Roma.

In all administrative centers Kermis or native folk dances and sport contests are held July 1. At Stanleyville, July 1, natives run river races in huge canoes. Independence Day, July 18, is celebrated. July 21, in provincial capitals, the Te Deum Review is given with student and other parades, vegetable and flower shows and displays of native arts and crafts. International soccer matches are held July 21 at Leopoldville and Elizabethville. On October 4, natives originating from Portuguese colonies celebrate the Portuguese national holiday in Leopoldville and elsewhere in the Lower Congo.

British and French Somaliland

Arid and nearly always hot, frequently oppressive, in all months of the year. The average temperature at Berbera is 77 in January, 98 in July. Rainfall is very light and fogs are frequent in the summer along the coast. Best traveling time: November to March.

Monetary unit: British and French currency.

Principal cities: Berbera (Brit. Somal.), Djibouti (Fr. Somal.).

Entry requirements: Passport, visa (issued by British or French consul, depending on area visited), smallpox vaccination certificate. If passing through West Africa, Belgian Congo or Lower Sudan, possession of yellow fever inoculation certificate dated not less than fourteen days or more than two years prior to departure.

Airlines: Air France (in French Somaliland).

Hotels: Djibouti: Continental, des Arcades.

British and French national holidays are observed. For Mohammedan holiday information see last paragraph under Algeria.

Egypt

Winters are cool along the coast, mild inland. Summers are hot and about 10° warmer inland than near the coast. In Cairo, January averages are 55 compared to 62 at Assuan. During July, temperature averages are 83 at Cairo, 93 at Assuan. The average summer day in Cairo is in the 90's but the nights are about 25° cooler. Rainfall is light, some parts receiving almost none. Best traveling time: November to May.

Monetary unit: Egyptian pound. Coins used: plaster (20, 5, 2); millièmes (10, 5, 2, 1, ½). One pound equals 100 piasters; one plaster equals 10 millièmes.

Principal cities: Alexandria, Assuan, Cairo, Luxor, Port Said, Suez.

Entry requirements: Passport, visa. If from Bagdad, smallpox vaccination certificate dated not less than 21 days or more than two years prior to arrival in Egypt. Possession of yellow fever inoculation certificate dated not less than 14 days or more than two years prior to entry into Egypt if having passed through the following countries: Angola, Anglo Egyptian Sudan (south of Khartoum), Belgian Congo, Cameroons, Ethiopia, French Equatorial Africa, French Guinea, French West Africa, Gambia, Gold Coast, Liberia, Nigeria, Sierra Leone, Uganda.

Airlines: BOAC, KLM, TWA (Cairo), Air France.

Steamships: To Alexandria: American Export Lines (Amer), American President Lines (Amer), Barber SS Line (Amer), Fern Line (Norweg), Ellerman, Westcott and Laurence (Brit), Isthmian Lines (Amer), Kerr Line (Brit), Prince Line (Brit). To Port Said: American President Lines, Blue Funnel Lines (Brit), Ellerman, City & Hall (Brit), Henderson (Brit), Holland Lines (Dutch), Isthmian, Kerr, Orient Line (Brit), Prince Line, Union Castle

Brit), Wilhelmsen (Norweg). To Suez: American President Lines, Anchor Line (Brit), Holland Lines, Isthmian, Orient Line, Union Castle.

Hotels: Alexandria: Cecil, Windsor. Assuan: Cataract, Grand. Cairo: Carlton, Continental-Savoy, Mena House, Metropolitan, National, Shepheard's. Luxor: Luxor, Winter Palace (open from December 15 to March 31 only). Port Said: Casino Palace, Eastern Exchange. Suez: Bel Air. **American Express Office:** Cairo: 47 Sh. Talika Farida.

For Mohammedan holiday information see last paragraph under Algeria.

Ethiopia (Abyssinia)

Moderate plateau climate in higher elevations, warmer in lower areas, with moderate rainfall (about 50 inches), most of which falls from June to September, November to February being the driest season. At Addis Ababa the average monthly temperatures range from 59 in December to 66 in May, while at Gambela (lower elevation) the range is between 80 and 85°. Best traveling time: December to May.

Monetary unit: Ethiopian dollar. Coins used: dollar; cent (50, 25, 10, 5, 1). One dollar equals 100 cents.

Principal cities: Addis Ababa, Asmara.

Entry requirements: Passport and visa issued by British consul).

Airlines: BOAC, Air France.

Hotels: Addis Ababa: Bolulakos, de France, Imperial.

For Mohammedan holiday information see last paragraph under Algeria.

French Equatorial Africa

Hot and humid with average temperatures usually about 80, higher in the Sahara region in the north. Rainfall along the coast is extremely heavy, moderate to heavy in central sections and light in the north. The dry season is June to September in the south, October to April in the north. In the south the wettest months are March, April, October and November. Best traveling time: December to May.

Monetary unit: French currency.

Principal cities: Brazzaville, Duala, Yaounda.

Entry requirements: Passport, visa, yellow fever inoculation certificate, five photographs.

Airlines: PAA (Leopoldville, Belgian Congo, which is on the Congo River directly across from Brazzaville), Air France, Sabena.

Steamships: To Duala: Barber Line (Brit), Elder Dempster Line (Brit), Holland-West Africa (Dutch).

Hotels: Brazzaville: Boarding house accommodations only. Duala: A B C Hotel, Poste.

French national holidays are observed.

For Mohammedan holiday information see last paragraph under Algeria.

French West Africa

The west coast area has an average winter temperature of 70, the summer averages 82, with 20° variation daily. Rainfall is very light. In the interior, winter temperatures average about 75, summers 85 to 90 or higher and rainfall ranges from almost none in the northern desert region to 40 inches in the southern section. Along the south coast, humidity is excessive and in the dry season, November and December, the monthly temperatures average in the 70's or 80's. During the wet season, from April to November, the temperatures are in the 80's with March to May the hottest months. Rainfall is extremely heavy along parts of the coast, decreasing progressively northward. Best traveling time: November to February.

Monetary unit: French currency.

Principal city: Dakar.

Entry requirements: Passport, visa (French consular officer), yellow fever certificate, five photographs.

Airlines: PAA (Dakar), Air France, Sabena.

Steamships: To Dakar: American West African Line (Norweg), Elder Dempster Line (Brit.).

Hotels: Dakar: Central, Europe, Metropolitan, Palais.

French national holidays are observed. For Mohammedan holiday information see last paragraph under Algeria.

Gambia

Daytime temperatures are in the 80's, nights in the 60's or 70's with only a few degrees variation in average temperatures throughout the year. Very humid from June to October. Moderate rainfall with maximum during August and September. Best traveling time: December to March.

Monetary unit: British West African shilling. British currency used plus local coins of shilling (2, 1) and pence (6, 3, 1½). One West African shilling equals twelve pence.

Principal city: Bathurst.

Entry requirements: Passport, visa (by British consular officer), yellow fever certificate.

Airlines: Air France, British South American Airways, Ltd.

Steamships: To Bathurst: Elder Dempster Lines (Brit), Holland-West Africa (Dutch).

Hotels: Bathurst: Boarding house accommodations.

British national holidays are observed.

Gold Coast

Hot and humid with temperatures in the high 70's and 80's and only a few degrees variation in average monthly temperatures. Rainfall is moderate with wet season from April to November. Best traveling time: December to May.

Monetary unit: Same as Nigeria.

Principal city: Accra.

Entry requirements: Passport, visa (by British consular officer), yellow fever certificate. If not vouched for by firm or person of standing in the colony, must leave \$60 on deposit upon arrival.

Airlines: BOAC, PAA (Accra), Air France.

Steamships: To Accra: American West African Line (Norweg), Elder Dempster Line (Brit), Holland West African Line (Dutch).

British national holidays are observed.

Kenya

Coastal climate at Mombasa varies from an average temperature of about 75 in July to 80 from December to April, with about 10° variation daily. Interior elevations are much cooler with yearly averages varying from 60 to 66 at Nairobi and with snow remaining most of the year on the highest mountain peaks. Light to moderate rainfall is irregularly distributed with March to August being the wettest season. Best traveling time: October to February.

Monetary unit: East African shilling. Coins used: shilling (10, 5, 1); cent (50, 10, 5). One shilling equals 100 cents. British currency is also used.

Principal cities: Mombasa, Nairobi.

Entry requirements: Passport and visa (by British consular officer). If arriving from India, possession of smallpox vaccination certificate dated not less than twelve days or more than three years prior to departure from India. If arriving from West Africa, Belgian Congo or Lower Sudan, possession of yellow fever inoculation certificate dated not less than fourteen days or more than two years prior to departure. Women and children must obtain entry permit prior to departure and a deposit or bond is required.

Airlines: BOAC, Air France.

Steamships: To Mombasa: American South African Line (Amer), Furness, Withy & Co. (Brit), Norton, Lilly & Co. (Brit), Robin Line (Amer), Union Castle (Brit).

Hotels: Mombasa: Manor, Palace. Nairobi: Avenue, New Stanley, Salisbury, Torr's.

Good game hunting for lion, rhino, buffalo, eland, hippo, oryx, impala, water-buck, gazelle, wart hog, zebra.

British national holidays are observed.

Liberia

Very humid and warm with only about 5° variation in average monthly temperatures. Hottest months are March to May with temperature average about 82. Extremely heavy rainfall with rainy season from April to November and August the wettest month. Best traveling time: December to March.

Monetary unit: U. S. dollar. Coins used: British coins chiefly used plus Liberian cent (50, 25, 10, 2, 1). One dollar equals 100 cents.

Principal city: Monrovia.

Entry requirements: Passport, visa, yellow fever inoculation certificate.

Airlines: PAA (Monrovia), Air France.

Steamships: To Monrovia: American West African Line (Norweg), Elder Dempster (Brit), Holland West African (Dutch).

Hotels: Monrovia: Faulkner's.

Parades, speeches, balls honor Pioneers Day, January 7, Independence Day, July 26 (1947 is 100th anniversary). December 1 is Mathilda Newport Day, named for the "Joan of Arc" of Liberia.

Libya

Winters are cool, summers warm along coast, hot inland. There is about a 25° daily variation in temperatures and in Benghazi (January average 55, July 78) although summer days are in the 90's or higher, the nights are usually cool. Rainfall is very light and Libyan desert has practically none, making desert air dry, bringing frequent dust storms. Best traveling time: October to May.

Monetary unit: Italian currency.

Principal cities: Benghazi, Tripoli.

Entry requirements: U. S. State Department authorization.

Airlines: Air France, TWA (Tripoli).

Hotels: Tripoli: Grand Municipale.

For Mohammedan holiday information see last paragraph under Algeria.

Madagascar

Mild and warm on the east coast with temperatures averaging 79 in January and 69 in July. The highlands are ten or more degrees cooler. Rainfall is very heavy with most from January to March. The west coast is drier and about 5° hotter than the east. Heavy rainfall in the north, decreasing to very light in the southwest. Best traveling time: May to December.

Monetary unit: Same as France.

Principal cities: *Tananarive*, *Tamatave*.
Entry requirements: Passport and visa (by French consul).
Airlines: BOAC, Air France.
Steamships: To *Tamatave*: *Funch*, *Edye*; *Co.* (Brit), *Robin Line* (Amer).
Hotels: *Tamatave*: *France*, *Metropole*, *Plage*, *Poste*. *Tananarive*: *Colbert*, *du Commerce*, *Grand*, *Modern*.

French national holidays are observed. For Mohammedan holiday information see last paragraph under *Algeria*.

Morocco

Along the Atlantic coast the weather is cool with summer averages about 70, winters about 55 and small temperature range, very light rainfall, high relative humidities, heavy dews, frequent fogs. Between the coast and the Atlas range, summers are warmer (80's), winters cooler (50's) and there is less rainfall, no rain in summer except in the Atlas ranges. Hot, dry winds from the Sahara in spring, cool ocean winds in summer. Best traveling time: October to May.

Monetary unit: Moroccan franc. Coins used: franc (20, 10, 5, 2, 1); centime (50, 25, 10, 5). One franc equals 100 centimes.

Principal cities: *Casablanca*, *Fez*, *Marrakech* (Morocco), *Rabat*.

Entry requirements: Passport, visa (by French consular officer), yellow fever inoculation certificate, five photographs.

Airlines: Air France.

Steamships: To *Casablanca*: *American Export Lines* (Amer), *French Line* (French), *Isbrandtsen Line* (Amer), *Lykes Lines* (Amer), *United States and Levant Line*.

Hotels: *Casablanca*: *Ambassadeur*, *Anfa*, *Majestic*, *Trans-Atlantique*, *Plaza*. *Marrakech*: *de la Mamounia*, *Majestic*. *Rabat*: *Balima*, *Grand*, *Royal*.

Along the northern Mediterranean coast and extending inland one hundred to two hundred miles, is SPANISH MOROCCO in nearly the same latitude as southern California and with a similar warm climate, dry and hotter inland. Passport and visa (issued by Spanish consul) are required for entry and the chief cities are *Ceuta* and *Tetuan*. Hotels in *Tetuan*: *Alfonso XIII*, *Espana*. At the extreme northwest tip is the internationalized seaport of *TANGIER* governed jointly by Britain, France and Spain. Hotels in *Tangier*: *Continental*, *El Minzah*. Across the Strait is the British crown colony fortress of *GIBRALTAR*, connected to the Spanish mainland by a low, sandy strip of land. The Rock's numerous caves and tunnels are an interesting contrast to its colorful Gardens. Gibraltar is served by BOAC and the following steamship lines: *American Export Lines*, *Anchor*

Line (Brit), *Bibby Line* (Brit), *Ellerman Lines* (Brit), *Henderson Line* (Brit), *Orient Line* (Brit), *Rotterdam Lloyd* (Dutch), *Union Castle* (Brit). Gibraltar hotels: *Bristol*, *Cecil*, *Grand*, *Rock*.

French national holidays are observed. For Mohammedan holiday information see last paragraph under *Algeria*.

Mozambique

Summers hot with January averages about 80; winters cool with July averages about 68. The daily variation is from 15 to 20°. Light to moderate rainfall with frequent thunderstorms. The wet season is from November to April. Best traveling time: May to October.

Monetary unit: Portuguese currency.

Principal cities: *Beira*, *Lourenco Marques*, *Mozambique*.

Entry requirements: Passport and visa (issued by Portuguese consul). Authorization communication must be obtained, applicant paying expense. Travelers must have round-trip ticket or transportation to country beyond which will grant entry. All persons except British subjects remaining less than ninety days must deposit approximately \$250 in U. S. currency.

Airlines: Air France.

Steamships: To *Beira* and *Lourenco Marques*: *American South African Line* (Amer), *Barber Line* (Brit), *Furness Withy & Co.* (Brit), *Holland African Line* (Dutch), *Kerr SS Line* (Brit), *Lykes Lines* (Amer), *Norton, Lily & Co.* (Brit), *Robin Line* (Amer), *Silver-Java Pacific Line* (Dutch), *Union Castle* (Brit). To *Mozambique*: *Holland African Line*, *Union Castle*.

Hotels: *Beira*: *International*, *Queen's*, *Savoy*. *Lourenco Marques*: *Cardoza*, *Carlton*, *Polana*.

The town of Mozambique is on a small coral island at the mouth of the *Monapo River*; has only 7,000 population.

Portuguese holidays are observed as listed under *Angola*. For Mohammedan holiday information see last paragraph under *Algeria*.

Nigeria

Hot and humid with extremely heavy rainfall near the coast, decreasing to light rainfall in northern section. The rainy season lasts from March to November with maximum rains July to September. Coastal temperatures are about 80 with slight variation throughout the year. In the north, average temperatures are about 90 during warmest months, March to May, and about 75 in January. The daily variation is 10 or 15°. Best travel time: December to March.

Monetary unit: British West African

pound. Coins used: shilling (2, 1); pence (6, 3, 1, $\frac{1}{2}$). British coins are also used.

Principal city: *Lagos*.

Entry requirements: Passport and visa (by British consular officer), yellow fever inoculation certificate. If not vouched for by firm or person of standing in Nigeria, traveler must deposit £60 upon arrival.

Airlines: BOAC, Air France, Sabena.

Steamships: To Lagos: American West African Line (Amer), Elder Dempster Line (Brit).

Hotels: Lagos: Bristol, Grand.

British national holidays are observed.

Northern Rhodesia

Summer days are hot, nights mild. The average temperature at Livingstone in October is 80, in January 76 and July 66. Rainfall is light and there are frequent thunderstorms. The wet season lasts from November to April. Best traveling time: May to September.

Monetary unit: British currency. Local shilling (2, 1) and pence (6, 3, 1, $\frac{1}{2}$) also used.

Principal cities: Livingstone, *Lusaka*.

Entry requirements: Same as Union of South Africa.

Airlines: South African Airways.

Hotels: Lusaka: Grand, Lusaka.

British national holidays are observed.

Nyasaland

At Zomba, January temperatures average 72, July 61. Frequent thunderstorms, moderate rainfall, with wet season lasting from November to April. Best traveling time: May to October.

Monetary unit: British currency. Local shilling (2, 1) and pence (6, 3, 1, $\frac{1}{2}$) also used.

Principal city: Blantyre, *Zomba*.

Entry requirements: Same as Union of South Africa.

Hotels: Blantyre: African Lakes, Commercial, Ryalls.

British national holidays are observed.

Portuguese Guinea

Hot and humid with little variation in average monthly temperatures. Rainfall is light. Best traveling time: December to March.

Monetary unit: Portuguese currency.

Principal cities: Bissau, *Bolama*.

Entry requirements: Passport and visa. Authorization must be obtained, applicant paying communication expense.

Airlines: PAA (Bolama), Air France.

Hotels: Bolama: PAA passengers accom-

modated at PAA staff quarters. Boarding house accommodation available for other than PAA travelers.

Portuguese holidays are observed as listed under Angola. For Mohammedan holiday information see last paragraph under Algeria.

Rio de Oro

Although the average temperatures in Cape Yubi are in the 60's the year round inland areas are hot and arid. Rainfall is light. Best traveling time: December to March.

Monetary unit: Spanish currency.

Principal city: *Villa Cisneros*.

Entry requirements: Passport and visa (by Spanish consul).

Lying off the northwest coast are the CANARY ISLANDS with an equable and generally pleasant climate. The capital and principal port is Las Palmas, served by the following steamship lines: Blue Funnel & White Star (Brit.), Elder Dempster (Brit.), Holland West African (Dutch), Royal Mail Lines, Ltd. (Brit.), Union Castle (Brit.). Hotels at Las Palmas: Madrid, Metropole, Santa Brigida. Just north of Rio de Oro, in French Morocco, is the 965 square mile Spanish colony and town of Ifni, extending from the coast fifteen miles inland. As in the Canary Islands, the principal occupation is fishing. Currency and entry requirements for the Canary Islands and Ifni are the same as for Rio de Oro. Local transportation is available from Las Palmas to Rio de Oro and Ifni.

Sierra Leone

During March, April and May, the hottest months, the temperature averages 81 and there is only a 5° variation in monthly averages. Rainfall is extremely heavy, especially from April to November. Best traveling time: December to March.

Monetary unit: British West African pound. British coins are used plus local shilling (2, 1) and pence (6, 3, 1, $\frac{1}{2}$). One shilling equals twelve pence.

Principal city: *Freetown*.

Entry requirements: Passport, visa (by British consular officer), yellow fever inoculation certificate.

Airlines: Air France.

Steamships: To Freetown: American West African Line (Norweg), Elder Dempster Lines (Brit), Holland West African Line (Dutch).

Hotels: Freetown: City, Grand.

British national holidays are observed.

Southern Rhodesia

Summer days are hot, nights mild with average temperatures at Salisbury and

Bulawayo in January at 70, in July 56. In the highlands, frosty nights and ice occasionally occur during winter. Light rainfall and frequent thunderstorms with wet season from November to April. Best traveling time: May to October.

Monetary unit: British currency. Local shilling (2, 1) and pence (6, 3, 1, $\frac{1}{2}$) also used.

Principal cities: Bulawayo, *Salisbury*.

Entry requirements: Same as Union of South Africa.

Airlines: BOAC, Sabena.

Hotels: Salisbury: Meikles, Windsor. Bulawayo: Avenue, Carlton.

On the Zambezi River in the western part of country is Victoria Falls.

British national holidays are observed.

Southwest Africa

The average monthly temperatures range at Windhoek from 74 in December and January to 56 in June and July. Coastal temperatures are lower, due to the cool Benguela Current, but fogs are frequent. Very light rainfall, most (22 inches annually) occurring inland from October to June. Best traveling time: December to June.

Monetary unit: Southwest African pound. Coins used: shilling (2, 1); pence (6, 3, 1, $\frac{1}{2}$). One pound equals twenty shillings; one shilling equals twelve pence. British currency is also used.

Principal cities: Swakopmund, *Windhoek*.

Entry requirements: Same as Union of South Africa.

Airlines: South African Airways.

Hotels: Swakopmund: Eggers, Kaiserhof. Strand. Windhoek: Grossherzog, Kaiserkrone.

British national holidays are observed plus Dingaan's Day, December 16.

Spanish Guinea

Hot and humid with average monthly temperatures about 80 throughout the year. Heavy rainfall, with wet seasons during March and April, October and November. Best traveling time: May to October.

Monetary unit: Spanish currency.

Principal cities: Benito, *Santa Isabel*.

Entry requirements: Passport and visa (by Spanish consul).

Steamships: To Santa Isabel: Elder Dempster (Brit), Holland West African Line (Dutch).

Santa Isabel is actually on the island of Fernando Po, to the northwest of Benito. Local transportation to the mainland is available from Santa Isabel.

Tanganyika

Coastal temperatures at Dar es Salaam range from 74 in July to 82 in January. It is much cooler inland in higher elevations (at Gandala July average is 53, January 61). Rainfall is light to moderate and irregularly distributed. The wet season is from November to April in the southern section; March to May and November to December in the north. Best traveling time: June to October.

Monetary unit: East African shilling. Coins used: shilling (1); cent (50). Twenty shillings equal one East African pound; one shilling equals 100 cents. British currency is also used.

Principal cities: *Dar es Salaam*, Tanga.

Entry requirements: Same as the Union of South Africa.

Airlines: Air France.

Steamships: To Dar es Salaam and Tanga: American South African Line (Amer), Holland African Line (Dutch), Robin Line (Amer), Union Castle (Brit).

Hotels: Dar es Salaam: Burge, Central, New Africa. Tanga: Grand.

The Serengeti Plains in the vicinity of Arusha are considered the best lion country in the world. In the north is Lake Victoria, whose circumference is larger than Ireland. Also in the north is famed Mount Kilimanjaro. Twenty-five miles off the coast lies the British-controlled island of ZANZIBAR whose principal city is Zanzibar. Divided by highlands, the eastern part is unproductive, the western section fertile. The climate is tropical and rainfall averages 60 inches annually. Entry requirements are the same as for the Union of South Africa and the steamship lines listed above serve the island, whose population, though consisting of many nationalities, is mainly Moslem. Hotel in Zanzibar: Afrika.

British national holidays are observed in both Tanganyika and Zanzibar. For Mohammedan holiday information see last paragraph under Algeria.

Tunisia

Summers are hot, winters cool, with a 20 to 25° variation between day and night temperatures. In Tunis, the January average is 51, in August 80; summer days in the 90's and sometimes over 100, but the nights are nearly always cool. Rainfall is very light. Prevailing northeast winds prevent excessive heat. Best traveling time: October to May.

Monetary unit: French franc. Coins used: franc (2, 1); centime (50, 25, 10, 5, 2, 1). One franc equals 100 centimes. French currency is extensively used.

Principal cities: Bizerte, Sfax, *Tunis*.

Entry requirements: Passport, visa (by

French consular officer), yellow fever inoculation certificate, five photographs.

Airlines: TWA (Tunis), Air France.

Steamships: To Bizerte and Tunis: American Export Lines (Amer), French Line (French).

Hotels: Bizerte: France, Grand, Paix, Paris. Sfax: France, Oliviers. Tunis: Grand, Majestic, Moderne, Paris, Regence, St. George, Transatlantique, Tunisia.

French national holidays are observed. For Mohammedan holiday information see last paragraph under Algeria.

Uganda

The average monthly temperatures at Entebbe are about 70 the year around. The moderate rainfall is irregularly distributed, heaviest from March to May and November to December. Best traveling time: June to October.

Monetary unit: East African shilling. Coins used: shilling (1); cent (50, 10, 5). One shilling equals 100 cents. British currency is also used.

Principal cities: Entebbe, Kampala.

Entry requirements: Same as the Union of South Africa.

Airlines: South African Airways.

Hotels: Entebbe: Boarding house accommodations only. Kampala: Cecil, Imperial.

Although Entebbe is on Lake Victoria, its population is only around 6,000 and Kampala, a few miles northwest of Entebbe, population 40,000, is the main commercial center. Excellent big game hunting is available. Holidays celebrated are the same as the Union of South Africa, except that the King's Birthday is not observed.

Union of South Africa

In the coastal areas of the Cape Province, the average winter temperatures are about 60 in July, with summer temperatures varying from 70 to 80 and January the hottest month. Southeast gales are frequent and hot and oppressive "Berg" winds last several days. Rainfall is light with the wet season in the winter in the southwestern section, in summer in other areas. Inland, thunderstorms are frequent and sometimes quite severe, mostly occurring in June and October, with February receiving the fewest. In the Karoo plateau, winter temperatures are frequently below freezing (as low as 12°), the mountains often covered with snow, air very dry and a daily temperature range of about 30. Summer temperatures are sometimes as high as 110. Rainfall in the Orange Free State is light, the climate dry, and January temperatures at Kimberly average 78, July at 52. At Durban the average temperature in July is 65, in January 85, with a

daily range of about 20° and inland elevations, cooler, have a daily range of about 30°. Rainfall is moderate and thunderstorms frequent with October to March the wettest months. Farther north, in Transvaal, the January averages at Johannesburg and Pretoria are 66 and 72, respectively, with July about 50. The atmosphere is clear, fogless, and the heat is rarely oppressive even in summer when the nights are uniformly cool. Rainfall is light although there are short, sometimes violent, thunderstorms. At all seasons there is a pleasant breeze and in winter night frosts and cold winds are frequent.

Best traveling time: May to October.

Monetary unit: South African pound. Coins used: shilling (2, 1); pence (6, 3, 1, ½, ¼). One pound equals 20 shillings; one shilling equals 12 pence. British currency also used.

Principal cities: Capetown, Durban, East London, Johannesburg, Port Elizabeth, Pretoria.

Entry requirements: Passport and visa (issued by British consular officer). If arriving from India, possession of smallpox vaccination certificate dated not less than twelve days or more than three years prior to departure from India. If originating or having passed through any of the following countries, possession of yellow fever certificate dated not less than fourteen days or more than two years prior to departure: Angola, Anglo-Egyptian Sudan (south of Khartoum), Belgian Congo, Cameroons, Ethiopia, French Equatorial Africa, French Guinea, French West Africa, Gambia, Gold Coast, Liberia, Nigeria, Sierra Leone, Uganda. Consuls must obtain authorization from the Union, applicant paying communication expense. Travelers must have round-trip tickets or transportation to a country beyond granting entry. A deposit of from £5 to £75 may be required of certain persons.

Airlines: BOAC, PAA (Capetown, Johannesburg), Sabena, South African Airways.

Steamships: To Capetown and Durban: American South African Line (Amer), Barber Line (Brit), Blue Funnel & White Star (Brit), Ellerman & Bucknell Line (Brit), Holland Africa Line (Dutch), Lykes Lines (Amer), Robin Line (Amer), Silver-Java Pacific Line (Dutch), Union Castle Line (Brit), Wilhelmsen Line (Norweg). To East London and Port Elizabeth: Same except for Wilhelmsen Line.

Hotels: Capetown: Assembly, Carlton, Cumberland, Grand, Imperial, Langham, Metropole, Mount Nelson. Durban: Balmoral, Beach, Caister, Marine, Osborne, Royal. East London: Marine, Windsor. Johannesburg: Carlton, Grand National, Heath's, Langham, Linton's, Moon, Orange Grove, Waverly. Port Elizabeth: Algoa,

beach, Elizabeth, King Edward, New Marine, Park, Pollock. Pretoria: Arcadia, Casa Mia, Eaton Hall, Edward, Grand, Hellenic, Imperial, Polley's.

Horse racing in July at Durban, the Summer Handicap in Johannesburg, the Metropolitan Handicap at the Cape are all brilliant social events. Excellent sea fishing off Cape and Natal coasts. One night journey from Johannesburg or Pretoria to the Kruger National Game Reserve, 8,000 square miles, largest wild animal sanctuary in the world. Dignified South Africans (over two million whites and usually referred to in South Africa as

Europeans) have no spectacular holiday celebrations such as the Mardi Gras in New Orleans. Shying from public demonstrations, they usually spend their holidays and celebrations of special occasions by going to the beaches, picnicking, dancing. Such days include Empire Day, May 24; Union Day, May 31; the King's birthday, first Monday in August. Dingaan's Day honors a Kaffir chief on December 16 with Afrikaan dances, parades. Black natives hold a Carnival in Capetown January 1-2 with parades, masquerades, dances. The Union has two official languages: English and Afrikaans.

MIDDLE EAST

Iran

The Shamal, a dust-laden northerly wind, blows fairly consistently for about four months in summer, carrying dust far into the Persian Gulf in June. In July, the southwest monsoon strikes the coast while in Siestan (Eastern Iran) the wind sets in at the end of May and continues to September, reaching 70 mph at times. The mean average temperature over the coast of Mekran is 80, at Bushire 75, lower in the interior. In the north, the July temperatures are 40° warmer than January, lessening to 22° warmer on the south coast. Winters in the highlands are severe. The January mean at Teheran is 35, at Isfahan below zero for the same month. During July and August, temperatures average over 80 in almost all Iran. The days are hot, the nights cool, except on the coast where the nights are warm, oppressive. Rainfall is light on the Mekran coast, averages 56 inches annually at Resht, lessening southward with rain falling spasmodically from October to May and reaching peaks during December and then March. Between December and April, snow falls in altitudes above 4,000 feet and passes are closed to vehicular traffic. Best traveling time: April, May; September, October.

Monetary unit: rial. Coins used: dinar (100, 25, 10, 5, 2, 1); shahi (3, 2, 1); kran (5, 2, 1, ½, ¼); toman (10, 5, 2, 1, ½, ¼); rial (2, 1, ½); pahlevi (5, 2, 1, ½). 50 dinars equal one shahi; twenty shahis equal one kran; ten krans equal one toman; 100 dinars equal one rial; 100 rials equal one pahlevi.

Principal cities: Hamadan, Isfahan, Mashbad, Resht, Shiraz, Tabriz, Teheran.

Entry requirements: Passport and visa. Authorization must be obtained from Iran, applicant paying communication expense.

Airlines: BOAC, KLM, Air France.

Steamships: To Abadan and Khoramshar: Isthmian Line (Amer); Norton Lilly (Brit).

Hotels: Teheran: Grand, Teheran Lalezar.

For Mohammedan holiday information see last paragraph under Algeria in African section.

Iraq

The winters fluctuate between clear skies, with cold dry winds from the northwest and rainy, cloudy days but a warm southeasterly wind. Snow falls infrequently but the January average at Baghdad is 49, at Mosul 40. Summers are hot and often dusty, the average monthly temperature at Baghdad for June being 90, rising to an average of 94 in both July and August. Rainfall is very light and almost nonexistent from June to October, most rain occurring during the spring thunder-showers. Best traveling time: March, April; October, November.

Monetary unit: Iraq dinar. Coins used: fil (200, 50, 20, 10, 4, 2, 1). One dinar equals one thousand fils.

Principal cities: Baghdad, Basra, Mosul, Sugash Shuyukh.

Entry requirements: Passport, visa (issued by British consular officer), cholera certificate. If arriving from India or Iran, possession of smallpox vaccination certificate.

Airlines: BOAC, KLM, Air France.

Steamships: To Basra: Isthmian Line (Amer), Java-Pacific Line (Dutch), Norton Lilly (Brit).

Hotels: Baghdad: Regent Palace, Semiramis. Basra: Rest House, Shatt-al-Arab.

For Mohammedan holiday information see last paragraph under Algeria in African section.

Palestine

In the Judea mountains the average monthly temperatures range from 44 in January to 73 in August. The coastal area is warmer (53 in January, 78 in August)

and in the Jordan valley the January and August averages are, respectively, 55 and 87. There is considerable daily temperature range, especially in the Jordan valley where temperatures occasionally rise from freezing to 80 within twenty-four hours. The Sirocco occurs in May and October but the period is brief. On hot, dry summer days, temperatures sometimes reach 100 in the shade but the usual high is 80 or 90. The southern end of Jordan receives the least rain and the rainfall on the coast and in the mountains is light, being only 28 inches annually and even less around the Sea of Galilee. Most rain falls during October, November, March and April. Best traveling time: October to May.

Monetary unit: Palestine pound. Coins used: mil (100, 50, 20, 10, 5, 2, 1). One pound equals one thousand mils.

Principal cities: Haifa, *Jerusalem*, Tel Aviv.

Entry requirements: Passport and visa (issued by British consular officer). If having passed through the following countries, possession of yellow fever inoculation certificate dated not less than fourteen days nor more than two years prior to entry: Angola, Anglo-Egyptian Sudan (south of Khartoum), Belgian Congo, Ethiopia, French Equatorial Africa, French West Africa, Gambia, Gold Coast, Liberia, Nigeria, Sierra Leone, Uganda.

Steamships: To Haifa: American Export Line (Amer), Barber Line (Brit), Fern Line (Norweg), Kerr SS Line (Brit), Prince Line (Brit). To Jaffa and Tel Aviv: American Export Line, Barber Line.

Hotels: Haifa: Appinger, Windsor, Windsor Annex. Jerusalem: American Colony, Eden, King David, St. Andrew's. Tel Aviv: Gat Rimmon, San Remo, Yarden. Christian travelers may be sheltered in Bethlehem at the Franciscan Hospice by special arrangement with the custodian.

East of Palestine and south of Syria is TRANSJORDAN, hot, dry, mainly desert except for a thirty-mile stretch of land in the west. The population is mainly Mohammedan and the chief city is *Amman*. Entry requirements are the same as for Palestine. For Mohammedan holiday information see last paragraph under Algeria in the African section.

Saudi-Arabia

(Including Political Divisions)

The Arabian peninsula is mainly desert and the climate is typical of hot, sandy areas with considerable daily variation. The inland climate is comparable to the Sahara. The mountains of Yemen receive moderate summer rain but the Oman area has only very light precipitation, most falling in winter. Aden has only 2 inches of rainfall annually and the mean temperature in June, its hottest month, is 89.

Jeddah, on the coast, averages 93 as a daily high during August and its lowest daily average is 68 in January. Best traveling time: December to April.

Monetary unit: English gold sovereign. Coins used: rupee (1, $\frac{1}{2}$, $\frac{1}{4}$); piastre (1, $\frac{1}{2}$, $\frac{1}{4}$); ryal (1, $\frac{1}{2}$, $\frac{1}{4}$). Two rupees equal one piastre; eleven piastres equal one ryal.

Principal cities: *Aden* (Aden), Hodeida (Yemen), Jeddah, *Mecca*, Medina, *Sana* (Yemen).

Entry requirements: Passport and visa (issued by British Consular Officer).

Airlines: TWA (Dhahran).

Steamships: To Aden: Blue Funnel (Brit), Holland East Asia (Dutch), Isthmian Line (Amer), Union Castle (Brit). To Jeddah: Isthmian Line.

Hotels: Aden: Europe, Grand Royal at Steamer Point. Hodeida and Medina: Boarding house accommodations. Christians are not allowed to remain in Mecca, foreign diplomats staying at Jeddah.

At Sheikh Othman in Aden, sometime between November and February (the fruit season), the Fête of Hashem Bahr is held in which tom-tom squads and dancing dervishes parade to the mosque where dagger men dance. For Mohammedan holiday information see last paragraph under Algeria in African section.

Syria and Lebanon

The Mediterranean strip has the most favorable climate, Beirut's mean average temperature being 68, the rainfall 22 inches per year. The cities of Aleppo and Damascus are hot and the sandy interior is typical of desert regions with daytime heat and temperatures dropping to coolness at night. In early summer, hot winds blow from the desert interior and in winter the Syrian mountains have frost, the coast ranges do not. In the Lebanese mountains, rainfall often exceeds 40 inches annually. Best traveling time: October to May.

Monetary unit: Syrian pound. Coins used: piaster (50, 25, 10, 5, 2, 1, $\frac{1}{2}$). One pound equals 100 piasters.

Principal cities: Aleppo, *Beirut* (Lebanon), *Damascus*.

Entry requirements: Passport and visa. Typhoid, typhus and smallpox inoculations not required but officially advised.

Airlines: BOAC, Air France.

Steamships: To Beirut: American Export Line (Amer), Prince Line (Brit), Barber Line (Brit).

Hotels: Beirut: Grand, Normandy, St. George. Damascus: Omayad, Orient-Palace.

For Mohammedan holiday information see last paragraph under Algeria in African section.

Turkey

Along the coast from the Troad to Batum the hills are under snow in spring and winter and icy winds blow from Russia. At Istanbul, the mean average temperature in January and February is 41, in August and a daily maximum that month of 71. Eastern Thrace is similar to Istanbul, living, as that city, blizzards in winter. A warmer Mediterranean climate is found on the Troad along the Ionian coast to Adana and around to the south coast as far as Adana. The rest of the country has frequent light snowfall in winter, an average of 90 in summer. Rainfall is very light on the coast; only 30 to 40 inches annually in Eastern Thrace and Gallipoli, the wettest sections. The central plateau receives about ten inches of rain a year in early summer. Best traveling time: May to September.

Monetary unit: Turkish piaster (by law); Turkish pound (in practice). Coins used: piaster (500, 250, 100, 50, 25, 20, 10, 5, 2, 1); para (40, 20, 10, 5). One pound equals 100 piasters; one piaster equals 40 paras.

Principal cities: *Ankara, Istanbul, Smyrna, Uskudar.*

Entry requirements: Passport and visa.

Airlines: BOAC, Air France.

Steamships: To Istanbul: American Export Line (Amer), Barber Line (Brit), Fern Line (Norweg), Greek Line (Greek), Furness Line (Brit), Ellerman, Westcott and Laurence (Brit).

Hotels: Ankara: Ankara Palace. Istanbul: Parc, Pera Palace, Pokatlyian. Smyrna: Izmir Palace.

For Mohammedan holiday information see last paragraph under Algeria in African section.

ASIA

Afghanistan

Mountainous terrain with winter temperatures ranging in the north from -12 to 15 and in summer the Oxus region has temperatures sometimes 110 or 120 in the shade. From May to November the daily temperature range exceeds 30°. Summers, hot throughout the country, are particularly bad around Kandahar which has dust storms and few winters with snow. Rainfall, in the spring, is light. Best traveling time: April, May; September, October.

Monetary unit: afghani. Coins used: afghani (2, 1, ½); afghani (2½, 1, ½); rassa (20, 1); Puls (25, 10, 5, 3, 2, 1); diran (1); rupee (6, 5, 1, ½, ¼). One rupee equals 2 quirans or 12 shahis or 60 assas or 90 puls; one amani equals 20 ghanis.

Principal cities: *Herat, Kabul, Kandahar.*

Entry requirements: Passport and visa (issued by Turkish consuls).

The country has no railroads, horses and mules being the chief form of transportation passing through the Khyber Pass, main artery from Kabul to Peshawar, India. Population is chiefly Mohammedan. For Mohammedan holiday information see last paragraph under Algeria in African section.

China

For its latitude, north China has unusually severe winters and Peking's average January temperature is 23. Territory north of the Hwai River has at least one month whose mean temperature is below freezing. The Yangtze Valley is warmer yet the wide expanses of Tung-ting and Po-yang in the valley are often frozen and in summer, after the rains, at flood stage frequently.

Southern China has warm winters and, as in even north China, the season is brief and spring comes comparatively soon. Throughout China, summer temperatures are fairly uniform, with Peking, Shanghai and Hong Kong all averaging in the low 80s in June and high temperatures are less prolonged in the north. In July and August, however, Shanghai's average daytime temperature is 90, warmer than Hong Kong at 87 then. South China has temperatures over 60 almost all year, Hong Kong's lowest monthly average being 55 in the coldest month, February, the average high for that month being 63. Temperatures go over 60 in the Yangtze Valley for six to seven months of the year and are this high about five months of the year even in north China. The sheltered Red Basin of Szechwan has milder winters and cooler summers than the valley below the Gorges. As a whole, southeast China receives more rain (60 inches annually) than the southwest plateaux and the basin of Szechwan in the interior, which has about 40 inches of rain annually. Except for high precipitation on the southern coastal strip, the summer rains of south China are evenly distributed. About 45 inches of rain fall yearly in the Yangtze delta, lessening to 20 or 30 inches on the plain to the north of the Hwai River, dwindling to less than 20 inches on the loess plateau of northwest China and dying to nothing as the Gobi Desert is approached. Rainfall is heaviest from June to August, the season of the southeast monsoon, and least at the height of the northwest monsoon, from September to March. Peking receives three-fourths of its rain in the summer, although Shanghai has only slightly less than half its total during this season. Best traveling time: April to November.

Monetary unit: Chinese dollar. Coins used: dollar (1, $\frac{1}{2}$); Cent (20, 10, 5, 2, 1, $\frac{1}{2}$); cash (200, 100, 50, 20, 10, 5, 2, 1); fen (20, 10, 5, 1, $\frac{1}{2}$). One dollar equals 100 cents; one cent equals 10 cash.

Principal cities: Amoy, Canton, Changchow, Changsha, Chengtu, *Chungking*, Foochow, Hangchow, Hankow, Hanyang, Hong Kong, Lanchow, Nanking, Ningpo, Peking, Shanghai, Sian, Soochow, Tientsin, Tsinan, Tsingtao, Wenchow, Wuchang.

Entry requirements: Passport, visa, inoculations against cholera, typhoid/paratyphoid, typhus, plague and smallpox.

Airlines: PAA (Amoy, Canton, Chengtu, Chungking, Hankow, Hong Kong, Lanchow, Nanking, Peking, Shanghai, Sian, Tientsin, Tsinan, Tsingtao).

Steamships. To Hong Kong: American President Lines (Amer), Australian Oriental Line (Austral), Blue Funnel (Brit), De La Rama Line (Swed), Fern Line (Norweg), Furness Withy (Brit), Isthmian Line (Amer), Klaveness Line (Norweg), Norton, Lilly Lines (Brit). To Shanghai: American Pioneer Line (Amer), American President Lines, Barber Line (Brit), Blue Funnel Lines, De La Rama Line, East Asiatic (Dutch), Fern Line, Furness Withy Lines, Isthmian Line, Klaveness Line, Lykes Lines (Amer), Norton, Lilly Lines, Pacific-Orient Express (Norweg), Silver Line (Brit), Waterman Lines (Amer).

Hotels: Canton: Victoria. Chungking: Chialing House, Chungking Hostel. Hong Kong: Gloucester, Hong Kong; Metropole, Peninsula (at Kowloon on Chinese mainland), Repulse Bay. Nanking: Bridge House, Yangtze. Peking: Grand Hotel de Pekin, Grand Hotel des Wagons-Lits. Shanghai: Broadway Mansions, Cathay, Cathay Mansions, Metropole, Palace, Park. Tientsin: Imperial. Tsingtao: Grand, Strand.

American Express Offices: Hong Kong: 4 Des Voeux Road Central. Shanghai: 158 Kiukiang Road.

Set national holidays observed with speeches, parades and fireworks displays are January 1, anniversary of the founding of the Republic; March 29, Martyr's Day and Youth's Day, honoring seventy-two young revolutionists who fell in the uprising preceding the founding of the Republic; October 10, Independence Day, the anniversary of the revolution; November 12, the birthday of Dr. Sun Yat Sen, founder of the Republic, and also the anniversary of the founding of the Kuomintang. Many holidays are based on the lunar calendar. In late January or early February, the biggest street celebrations of the year welcome the lunar New Year with merrymaking, lanterns at night, fireworks. In June, traditional races are held for the Dragon Boat Festival with musicians and celebrants boarding gaily decorated boats shaped like dragons. A Mid-autumn Festi-

val is held in September with games, music, family reunions, fairs and bazaars in which dolls and toys are featured. China has many religious sects who observe their own distinct customs and occasions, including an estimated 48 million Mohammedans. For Mohammedan holiday information see last paragraph under Algeria in African section.

The traveler should remember that HONG KONG, although included here for convenience, is actually a British crown colony off the southeast coast of China. Hong Kong is a thirty-two square mile island and the Hong Kong city (officially named Victoria) lies on the northern shore. The remainder of the island is mostly uncultivated as behind the city is a range of granite hills, extensively quarried, whose crowning point is Victoria Peak, 1,825 feet high, from which a magnificent view of the harbor may be had.

French Indo-China

In Cochinchina and Cambodia, the northeast monsoon lasts from October 1 to April 15, temperatures varying but slightly from 80 by day, 68 by night, and this period is known as the dry season. From April 15 to October 15 the monsoon blows southwest and the rains set in. During this period the temperature rises to 80 and stays there day and night with only the slightest of variation. April and May are the hottest months, however, because of humidity. The province of Annam receives rain in September and has a 59° temperature then. June, July and August are dry and the Annam temperature ranges from 86 to 95, the nights slightly cooler. In the north, Tonkin province has winter from October to May with the temperature rarely over 75, often 50°. Summer, however, is torrid with airless nights. In the interior it is cooler and drier, the higher altitude, valleys and hills bringing a more varying climate. Best traveling time: November to February.

Monetary unit: piastre. Coins used: piastre; cent (20, 10, 5, 1, $\frac{1}{2}$, $\frac{1}{4}$). One piastre equals 100 cents.

Principal cities: Cholon, Haiphong, Hanoi, Saigon.

Entry requirements: Passport and visa (issued by French consul).

Airlines: PAA (Hanoi).

Steamships: To Saigon: American President Lines (Amer).

Hotels: Hanoi: Metropole, Splendid. Saigon: Continental Palace, Majestic.

French national holidays are observed.

India and Burma

Keeping in mind the vast territory that ranges from steamy jungles to eternally snowed crags, India has four defined sea-

the cold season, January and February; the hot season, March, April and May; the southwest monsoon period, from June to October; the retreating monsoon, November and December. Northern India has great temperature variation and in the Punjab from November to February it is 30° lower than in southern India where the temperature remains fairly constant all year. In the Punjab, the United Provinces and northern India generally, from November to February the weather is cool, dry, cloudless, comparable to the Riviera. In mid-March, however, the hot season starts and temperatures rise until the sun-break in June. The highest temperatures occur in May in the Upper Sind, Northwest Rajputana and southwest Punjab, exceeding 110 in the daytime and averaging 90 over the interior, 95 in the central part. The southwest monsoon sets in the first two weeks of June on the Bombay and Bengal coasts, bringing more or less general rain during the next three months in every part of India, but the distribution is uneven. At Cherrapunji in the Khasi hills, the downpour is tremendous, reaching an average of 500 inches per year, most during June, July and August, while the 100 to 200 mile strip in west Deccan parallel to the Ghats together with the Myrora tableland and the Carnatic is often subject to droughts. The Bengal monsoon brings rain to greater part of the Central Provinces and Central India, Orissa and Bengal, diminishing rapidly northwest of that band. Karachi has about six inches of annual rain and the precipitation is heavier moving toward the Ganges River. Calcutta receives around 60 inches of yearly rain. In September, the monsoon force declines. The most unhealthy season is immediately following the rains, especially in northern India. Off India's southeast coast is the island of CEYLON, whose chief city, Colombo, has daytime averages in the high 80s throughout the year. Best traveling time: November to February.

Monetary unit: rupee. Coins used: rupee (1, ½, ¼, ⅓); anna (8, 4, 2, 1, ½, ⅓); pice (1, ½). One rupee equals 16 annas; one anna equals 12 pices; one pice equals 4 annas.

Principal cities: Agra, Ahmedabad, Amritsar, Allahabad, Amritsar, Bangalore, Bikaner, Baroda, Benares, Bombay, Calcutta, Cawnpore, Dacca, Delhi, Howrah, Hyderabad, Indore, Jaipur, Jubbulpore, Karachi, Lahore, Lucknow, Madras, Malabar, Mandalay (Burma), Moradabad, Moulmein (Burma), Multan, Mysore, Nagpur, New Delhi, Patna, Poona, Rangoon (Burma), Secunderabad, Sholapur, Srirangapatna, Trichinopoly.

Entry requirements: Passport, visa (issued by British consular officer), smallpox vaccination certificate. If having passed through the following countries, posses-

sion of yellow fever inoculation certificate dated not less than fourteen days nor more than two years prior to entry: Angola, Anglo-Egyptian Sudan (south of Khartoum), Belgian Congo, Ethiopia, French Equatorial Africa, French Guiana, French West Africa, Gambia, Gold Coast, Liberia, Nigeria, Sierra Leone, Uganda. Authorization must be obtained from Indian government, applicant paying communication expense. The maintenance and repatriation of all persons other than British subjects must be guaranteed by a person, firm or other organization in India and if guarantee is unavailable, sufficient funds must be deposited or bond given to cover return passage.

Airlines: BOAC, PAA (Calcutta), Indian National Airways.

Steamships: To Bombay: American Export Lines (Amer), American President Lines (Amer), British India Steam and Navigation Co. (Brit), Isthmian Line (Amer), Java-Pacific Line (Dutch), Norton, Lilly Lines (Brit), Silver-Java Line (Dutch). To Calcutta, Karachi, Madras and Rangoon: Same as to Bombay except for American President Lines. To Colombo, Ceylon: American President Lines, American Export Lines.

Hotels: Agra: Cecil, Empress, Imperial, Laures. Ahmedabad: Grand. Alahabad: Grand. Bangalore: Westend, Lavender. Benares: Clarks. Bombay: Grand, Majestic, Ritz, Taj Mahal. Calcutta: Grand, Great Eastern. Cawnpore: Berkeley House. Delhi: Cecil, Maidens, Swiss. Gwalior: Grand. Jaipur: Jaipur State, New, Kaiser-I-Hind. Karachi: Carlton, Killarney. Lahore: Faletti's, Nedous, Mandalay. Railway Restrooms. Madras: Connemara. Mysore: Carlton, Metropole. Peshawar: Deans. Poona: Napier. Rangoon: Strand. Rawalpindi: Flashman's. Colombo: Bristol, Galle Face, Grand Oriental.

American Express Offices: Bombay: Navsari Bldg., 240 Hornby Road. Calcutta: Pollock House, Pollock Street, Brabourne Road. Karachi: Oriental Bldg., McLeod Road.

Important Hindu holidays are celebrated with picturesque processions, fireworks and colored lights such as for Holi at the end of March, Dassera in the middle of October and Diwali near the end of October. There are numerous local holidays such as Coconut Day in Bombay on August 12, and throughout India sports such as cricket, tennis, golf, polo, and especially horse racing, are quite popular. In Burma, water festivals are held in April, near the end of the dry season, with pagoda ceremonies involving prayers for rain. In September, flowers, ceremonies and outdoor dramatic performances mark the end of Buddhist Lent. During the Feast of Lights in October the streets of towns and vil-

lages are illuminated by paper lanterns, floats bearing lighted candles are set adrift on rivers, and native dances and plays are given. Hindu holidays, as in India, are observed. There are many Mohammedans in both India and Burma. For Mohammedan holiday information see last paragraph under Algeria in African section.

Japan

Winters are long and cold, with temperatures progressively colder in northern latitudes. In January in Tokyo the days average about 47, the nights near 30. In the mountainous sections there is snow all winter. The hot, short summers are cooler in the northern islands. The warmest month in Tokyo is August, with average day temperature at 85, night near 72. Rainfall is moderate to very heavy throughout the year, most sections receiving heaviest precipitation during the summer. Best traveling time: May to September.

Principal cities: Fukuoka, Hakodate, Hamamatsu, Hiroshima (?), Kagoshima, Kanazawa, Kobe, Kumamoto, Kure, Kyoto, Moji, Nagasaki (?), Nagoya, Niigata, Okayama, Osaka, Otaru, Sakai, Sapporo, Sasebo, Sendai, Shizuoka, Taihoku, Tokyo, Wakayama, Yokohama, Yokosuka.

Entry requirements: U. S. State Department authorization.

Steamships: To Kobe, Yokohama: American President Lines (Amer).

Malay States

The Federated Malay States, under protection of Great Britain but not British possessions are: Perak, Selangor, Pahang and nine small states called Negri Sembilan. The Unfederated States, under British protection, are: Johore, Kelantan, Trengganu, Kedah and Perlis. The city of Singapore lies on an island just south of Johore. Climatically, Singapore is the hottest part of the States, having a high humidity and monthly temperature average about 88 all year. The mainland is cooler, particularly on the eastern slope, with temperatures below 70 at night. Rainfall on the west coast ranges from 64 inches to 115 inches yearly and on the east coast (where the monsoon strikes hardest), 112 inches annually. Best traveling time: November to February.

Monetary unit: Straits Settlements dollar. Coins used: dollar; cent (50, 20, 10, 5, 1, $\frac{1}{2}$, $\frac{1}{4}$). One dollar equals 100 cents.

Principal cities: Georgetown, Kuala Lumpur, Malacca, Singapore.

Entry requirements: Passport, visa (issued by British consular officer), cholera and yellow fever inoculation certificates, smallpox vaccination certificate.

Airlines: BOAC.

Steamships: To Singapore: American President Lines (Amer), Blue Funnel Lines

(Brit), Isthmian Lines (Amer), Norton, Lilly (Brit), U. S. Lines (Amer).

Hotels: Kuala Lumpur: Majestic, Station. Malacca: Resthouse. Singapore: Adelphi, Raffles, Sea View.

Manchuria

Winters are cold, summers hot, with midsummer temperatures averaging 70 to 75, dropping to 24 in winter at Dairen and below zero at Harbin. In the north the rivers are frozen over until April, only Port Arthur and Dairen in the south remaining free from ice all year. Rain is light in summer, heaviest in the East Manchurian Highlands and least in East Gobi. Best traveling time: May to September.

Monetary unit: yuan. Coins used: chiao (5, 1); fen (5, 1); li (5). One yuan equals ten chiao; one chiao equals ten fen; one fen equals ten li.

Principal cities: Chengte, Dairen, Harbin, Hsinking, Kirin, Mukden, Port Arthur.

Entry requirements: Passport and visa (issued by Chinese government only after traveler is in China).

Hotels: Dairen, Harbin, Hsinking, Mukden and Port Arthur: Yamato.

Netherlands East Indies

This vast equatorial area is mountainous in many places, generally hot, moist, with a mean average temperature of 80 across the islands and only a 2° or 3° annual variation. The daily minimum temperature at Batavia, JAVA, is 72 in August with 96 and 65 the highest and lowest recordings in that city. At Koepang, TIMOR, the July mean is 77 and 59 is the lowest known temperature. The mountains and the west and south coasts of SUMATRA and Java sometimes receive 250 inches of rain annually while the plains of east Sumatra receive 80 inches per year. The rains are heavy and hard but brief and the actual number of rainy days yearly is not uncommonly high. Most of Java's northern coast has 40 inches of rain per year but the heavy, short-lived showers give Batavia 72 inches annually yet the city has more frequent clear days than northwest Europe. Due to latitude, mountains and valleys and the numerous island formations, the rainy seasons differ greatly even on two sides of the same island but in general the Sumatra-Java area on the whole is rainy, hot and sultry from May to October. The cool, dry season is December and January; the hot, dry season during February, March and April. Best traveling time: November to February. North of Java is NETHERLANDS BORNEO, oppressive, humid, damp, hot on the coast, somewhat cooler inland. Temperatures average 78 to 86 throughout the country, rarely drop below 70 or rise above 96. Rainfall averages 150 inches yearly on the island, most oc-

During from November to May in torrential downpours. The northern sector of the island is BRITISH NORTH BORNEO and monthly temperature averages at Sandakan are consistently in the low 80s with a very slight variation all year. Heavy rains occur from October to January, the driest month being April which normally averages 4 inches of rainfall. SARAWAK and BRUNEI complete the northwest section of the island and temperatures average about 70 at night, rarely over 90 during the daytime. There is no definite dry season, although most rain falls from October to March. Kuching, Sarawak, averages 160 inches annually. Best traveling time throughout Borneo: April to September. East of Borneo lie the CELEBES, hot but tempered by sea breezes. The mean temperature ranges from 86 to 72, falling to 70 in the higher mountain altitudes. Rain on the west coast averages 20 inches at Malu, while at Macassar the annual average is 116 inches. Manado and Gorontalo, both on the northeast peninsula, average 106 inches and 47 inches annually, respectively. Farther eastward is the island of NEW GUINEA, whose temperature averages about 72 in the morning, is about 92 at noon. About 96 inches of rain falls on the east coast annually but is greater on exposed heights, lessening westward. In PAPUA, the dry season is from June to September with December to March rainy, Port Moresby receiving 40 inches of rain per year, yet Kikori, on the northeast shore of the gulf, has 230 inches annually, most falling during May and June, September and October. Throughout the Papua Territory, the mean average temperature is 78, with July and August the coolest months. Best traveling time throughout the island of New Guinea: June to October.

Monetary unit: Dutch currency. In British North Borneo, the Straits dollar; in Papua Territory, Australian currency.

Principal cities: *Batavia* (Java), *Macassar* (Celebes), *Padang* (Sumatra), *Palembang* (Sumatra), *Soerabaja* (Java), *Semarang* (Java).

Entry requirements: Passport, British and/or Dutch visa. Inoculations not required but officially advised if entering Dutch territory. If visiting British territory in the Indies, possession of yellow fever inoculation and smallpox vaccination certificates.

Airlines: BOAC, Royal Netherlands Indies Airways.

Steamships: To *Batavia*: American Pioneer Line (Amer), American President Lines (Amer), Blue Funnel Line (Brit), Isthmian Line (Amer), Java-Pacific Line (Dutch).

Hotels: *Batavia*: Des Indes Nederlanden. *Padang*: Oranje. *Macassar*: Grand. *Semarang*: Pavillon. *Soerabaja*: Oranje.

The birthday of Queen Wilhelmina is

celebrated August 31 with military and sports events, fireworks and illuminations, Chinese and Indonesian decorations and processions. For Mohammedan holiday information see last paragraph under *Algeria* in African section.

Philippine Islands

Although May is the warmest month, January the coolest, the mean annual temperature is 80 and monthly variation is slight, April to October averaging 80 to 82 and November to March at an average of 78 to 80. In western Luzon, Mindoro, Negros and Palawan and western and southern Panay, winter and spring are considered the dry season, receiving only 2 inches of rain during this period, with summer and autumn the wet. Along the eastern part of the archipelago, in southeastern Luzon, Samar, eastern Leyte in the Surigao Province of Mindanao, there is no well-defined dry season and the maximum rainfall occurs in winter. Average annual rainfall for the Philippines reaches 93 inches to 100 inches, with Benguet usually receiving the most. Considering the islands as a whole, in general there are three seasons: January to May, dry; June to October, rainy; November to December, relatively dry. Best traveling time: November to March.

Monetary unit: peso. Coins used: peso; centavo (50, 20, 10, 5, 1). One peso equals 100 centavos.

Principal cities: Cebu, *Manila*.

Entry requirements: Passport, smallpox vaccination certificate.

Airlines: PAA (*Manila*).

Steamships: To *Manila*: American Pioneer Line (Amer), American President Lines (Amer), Barber Line (Brit), Blue Funnel (Brit), Isthmian Line (Amer), Klaveness Line (Norweg), Lykes Lines (Amer), Norton, Lilly Lines (Brit), Silver-Java Pacific Line (Dutch), Waterman Lines (Amer).

Hotels: Cebu: Shamrock. *Manila*: Manila.

American Express Office: Manila: El Hogar Filipino Bldg., Calle Juan Luna.

Almost all towns and villages have fiestas honoring local patron saints, the dates varying with the communities. May Day, however, is observed widely with processions and with flower displays lasting the entire month. Official holidays, marked by parades, fireworks, floral offerings, dances and pageants, include July 4, Philippine Independence Day; November 30, National Heroes Day, honoring Philippine patriots; and December 30, José Rizal Day, commemorating execution in 1896 of national hero.

Siam

The wet season lasts from May to October but the full force of the monsoon is

broken by western frontier hills, giving Bangkok 50 inches of rain annually. During the wet season, the temperature averages 65 to 75 at night, 75 to 85 during the day and when the rain breaks it is hot and steamy. The northeast monsoon brings cooler weather in November, the nights averaging between 40 and 50, the days 80 to 85, occasionally 90. In February, the coast gets some sea breezes. Temperatures inland sometimes rise above 100. Best traveling time: November to March.

Monetary unit: baht or tical. Coins used:

tical (1, $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$); att (2, 1, $\frac{1}{2}$); satang (10, 5, 1, $\frac{1}{2}$). One baht or tical equals 64 atts or 100 satangs.

Principal cities: *Bangkok*, *Chiengmai*, *Nagor Rajasima*, *Ubol*.

Entry requirements: Passport. If passing through British territory, however, British require visa to country of destination.

Steamships: To Bangkok: *Blue Funnel Line* (Brit), *Isthmian Line* (Amer).

Hotels: Bangkok: *Europe*, *Oriental*, *Rajdhani*, *Trocadero*.

AUSTRALIA

The northern two-thirds, in general, has mean monthly temperatures in January of 80, February 85, June 55 and July 75. The southern third for the same months, respectively, is about 80, 65, 55, 50. Inland temperatures are extreme and in central Australia shade temperatures may reach 110 and drop at night to zero. The heat, however, is dry and bearable. The southeastern section of the country is coolest, the northwestern hottest, the heat, as inland, dry. Summers in the north coastal parts are enervating from Mackay to Broome. Darwin, in the north, averages daily highs in the 90s most of the year. Sydney, in the southeast, and Melbourne, farther south, are similar in temperature, Sydney being slightly warmer and both averaging daily highs of 78 in January and February, the warmest months. Sydney and Melbourne average 59 and 55, respectively, as daily highs during July, the coldest month. South of Australia lies TASMANIA, an island, whose west coast is cooler and rainier than the east, averaging 40 inches of rain annually, 60 inches to 120 inches inland, most falling during the Australian winter. Hobart, Tasmania, averages a daily high of 71 during January and February, warmest months, and 52 during the coldest month, July. Snow falls normally only on the southeastern highlands of Australia and in Tasmania. In the north of Australia, rains occur chiefly during the hot season, November to April, averaging 60 inches or less annually. In the south, rains average 40 inches or less, falling mainly during the Australian winter. The northeast Queensland coast is the wettest section (144 inches to 165 inches annually), and the Lake Eyre district is driest (5 inches per year). Best traveling time: November to April.

Monetary unit: Australian pound. Coins used: crown; florin; shilling; pence (6, 3, 1, $\frac{1}{2}$). One pound equals 20 shillings; one florin equals 2 shillings; one shilling equals 12 pence.

Principal cities: *Adelaide*, *Brisbane*, *Canberra*, *Hobart* (Tasm.), *Melbourne*, *Newcastle*, *Perth*, *Sydney*.

Entry requirements: Passport, visa (issued by British consular officer), smallpox vaccination certificate, possession of round-trip ticket or transportation to country beyond granting entry.

Airlines: *BOAC*, *Ansett Airways, Ltd.*, *Australian National Airways, Ltd.*, *Carpenter Airlines*, *Tasman Empire Airways*, *Qantas Airways*.

Steamships: To Adelaide and Brisbane: *American Pioneer Line* (Amer), *Funch*, *Edye* (Brit), *Norton, Lilly Co.* (Brit). To Melbourne and Sydney: *American Pioneer Line*, *Funch*, *Edye Line*, *Matson Line* (Amer), *Norton, Lilly Co.*

Hotels: Adelaide: *Oriental*, *Richmond*, *South Australian*. Brisbane: *Bellevue*, *Gresham*, *Lennon's*. Canberra: *Canberra*. Melbourne: *Australia*, *Carlyon*, *Chevron*, *Menzies*, *Oriental*, *Scotts*, *Windsor*. Perth: *Adelphi*, *Esplanade*, *Palace*, *Savoy*. Sydney: *Australia*, *Burlington*, *Carlton*, *Metropole*, *Petty's*, *Sydney*, *Usher's*, *Wentworth*. Hobart: *Hadley's*.

January 26, Australia Day, and April 25, Anzac Day, are observed with parades, sports events. The Sydney Cup horse race is run in April. Royal Agricultural Shows are held during the Easter season in Sydney, in August at Brisbane, in September, at Adelaide and Melbourne and in October at Perth and Hobart, Tasmania. From June to August winter sports carnivals are held and during the Australian summer surf carnivals are held on the beaches. Deep-sea fishing, golf and tennis are available the year around, as well as horse racing, the country's most popular sport. Greatest race is the Melbourne Cup held the first Tuesday in November at the Flemington Racecourse a few miles from the heart of Melbourne. Cricket in summer and football in winter are very popular sports.

NEW ZEALAND

Temperatures from December to March average a daily high in the low 70s at

Auckland, the coldest average high being 57 in July. Wellington is usually about

° cooler and South Island remains about 10° cooler than Auckland the year around. Rainfall is moderate except on the west slopes and the South Alps where 100 inches usually fall in a year, mostly in the spring. Best traveling time: December to March.

Monetary unit: New Zealand pound. British coins used except for farthing.

Principal cities: Auckland, Christchurch, Dunedin, *Wellington*.

Entry requirements: Passport and visa issued by British consular officer).

Airlines: PAA (Auckland), Tasman Empire Airways, Union Airways.

HAWAIIAN ISLANDS

The largest inhabited islands, in order of size, are: Hawaii, Maui, Molokai, Lanai, Kahoolawe, Oahu, Kauai and Niihau. There are many lesser islands and the entire group is cooler than other places in the same latitude, has abundant sunshine, no tropical storms. At times, especially in the winter, a southerly wind known as the KONA blows, bringing mugginess and heavy rains. The windward slopes of the islands are cooler than the leeward and temperatures drop about 1° for every 300 feet in altitude. Honolulu, on Oahu, averages a daily high of 76 in January and February, the coolest months, with the daily high averaging 84 during August, the warmest month. There is no distinct rainy and dry season but usually the winter is rainier. There is wide variation in temperature, rainfall and wind for the neighborhood islands. In Honolulu, however, rainfall averages about 28 inches annually and the mean annual temperature is 74. Best traveling time: November to May.

Monetary unit: U. S. currency.

Steamships: To Auckland, Wellington: American and Australian Line (Brit), American Pioneer Line (Amer), Matson Line (Amer), Oceanic SS Co. (Amer), Union of New Zealand Line (Brit).

Hotels: Auckland: Central, Grand, Royal, Station, Star. Christchurch: United Service, Warners. Dunedin: Grand. Wellington: Grand, Waterloo.

Anzac Day is observed April 25 with military parades, services for the war dead. A Provincial Anniversary is held in each province, Auckland's being January 29 and Wellington's on January 22.

Principal city: *Honolulu*.

Entry requirements: None for U. S. citizens.

Airlines: PAA (Honolulu).

Steamships: To Honolulu: American President Lines (Amer), American Pioneer Line (Amer), Matson Line (Amer), Oceanic SS Co. (Amer).

Hotels: Honolulu: Alexander Young, Halekulani, Moana, Royal Hawaiian.

May 1 is Lei Day during which garlands and baskets of flowers are given as presents and worn by most of the islanders. Surfboard paddling races and other sports events are held June 11, anniversary of Kamehameha, former king of Hawaii. On Regatta Day, sometime in September, inter-island boy and girl crews race in Honolulu Harbor. Bathing, surf-boarding, yachting, polo, golf, tennis, riding, deep-sea and trout fishing, wild pig hunting and mountain climbing are year-around activities. In winter, skiing in the mountains is available.

PACIFIC ISLANDS

The thousands of islands in the vast Pacific almost defy handy classification and, as a rule, tourists will visit certain groups briefly on cruise ships, usually in conjunction with trips to farther destinations such as the Orient or Australia. Travelers desiring to go for prolonged stays to any particular island or group of islands are advised to see an American Express representative for full information regarding accommodations, sanitation, monsoon seasons, diseases, climate and various facilities that may or may not be found in any definite locale.

In the MARIANAS the main islands are Rota, Guam, Tinian and Saipan. The climate is damp but the heat is not as high as in the Philippines. Southward are the PALAU ISLANDS, chief of whose twenty-

six islands is Peleliu. The climate is subtropical. The NEW BRITAIN ARCHIPELAGO is tropical but breeze-tempered. Southeast are the SOLOMON ISLANDS which include Bougainville and Guadalcanal. Damp, debilitating, with heavy rains, the dry season is from December to May. South of the Solomons are the SANTA CRUZ ISLANDS, hot, moist, frequently stormy. Farther south are the NEW HEBRIDES, about forty mountainous islands and numerous islets, hot and damp, particularly from November to April. The LOUISIAD GROUP, southwest, includes New Caledonia and is cooler, healthier than the New Hebrides. Fifty to one hundred miles northeast of New Caledonia is the LOYALTY GROUP. North of the equator but widely scattered are the

CAROLINE ISLANDS whose four main islands are Ponape, Kusale, Truk and Yap. Climate is moist, subject to severe storms. Eastward are the MARSHALL ISLANDS, damp and with an 80° mean temperature. January is hottest, July coolest. The GILBERT AND ELLICE ISLANDS, slightly north of the equator and just west of the 180th meridian, are hot. Some fifteen degrees below the equator are the FIJI ISLANDS. From April to November, winds are steady and the climate is dry, cool. Then the weather becomes uncertain, wet, warm and from November to March frequent heavy gales occur and sometimes hurricanes. Rainfall is greater on the windward side of the islands—Suva has 110 inches annually—but the mean temperature is about the same, 80, sometimes below 50 in the hills. Climate from November to April is enervating to Americans but not unhealthy. About six hundred miles north-northeast of New Zealand lie the KERMADEC ISLANDS, largest of them being Raoul or Sunday Island. The TONGAN ARCHIPELAGO has at least one hundred islands and is southeast of the Fiji group. It is dry and cool compared to Samoa and Fiji, averaging 75 to 77 but higher in the wet season. April to December cool winds come but sometimes build to violent force. Annual rainfall is heavy. The SAMOAN ARCHIPELAGO is a chain of many island groups, moist, occasionally oppressive, but pleasant on the whole. Climate is best from April to September, wet from October to March. At Apia, the mean temperature annually is 78, the warmest days reaching 80 in December, the coldest 75 in July. Most important of the COOK ISLANDS is Rarotonga. The climate is tempered by oceanic influences but reefs make accessibility difficult. In

the SOCIETY ISLANDS is Tahiti and though seasons are not well-defined the heat is great, dampness excessive, but the climate is not unhealthy. The TUAMOTU or LOW ARCHIPELAGO consists of countless islands, climatically healthy, and with a lower mean temperature than Tahiti, but rains and fogs occur even in the dry season. November to March is stormy. The chief islands are Rangiroa, Fakarava, Hao, Anaa. PITCAIRN ISLAND lies about one hundred miles south of the nearest Tuamotu group, has a variable climate, is rainy. Outlying island groups include the Marquesas, Palmyra, Washington, Fanning and Christmas Islands, Easter Island and the separately treated Hawaiian Islands.

Monetary unit: Currency of controlling government accepted.

Principal cities: Apia, Samoa; Noumea, New Caledonia; Papeete, Tahiti; Suva, Fiji Islands.

Entry requirements: Regulations for islands and groups vary according to controlling government. In general, however, in addition to passport and visa, smallpox vaccination and yellow fever inoculation certificates are needed. For the Fijis, a cholera inoculation certificate is also required. Travelers are advised *always* to investigate conditions prior to departure.

Airlines: PAA (Canton Island, Guam, Wake, Midway Islands; Noumea, New Caledonia; Suva, Fiji Islands).

Steamships: To New Hebrides: Burns Philip Line (Brit.). To Papeete, Tahiti: Union SS Co. of New Zealand (Brit.). To Pago Pago, Samoa; Suva, Fiji Islands: Matson Line (Amer.).

Hotels: Guam, Midway, Wake Islands: PAA passengers accommodated at PAA hdq. Noumea: Grand Hotel du Pacifique.

Vessels which have held the Blue Riband.

The Great Lakes and their connecting waterways are the world's most important bit of inland waterway transportation. The total distance of the system, measured along the steamer track from Duluth, Minnesota, to the outlet of Lake Ontario, is 60 miles.

Egyptian ladies in the days of Cleopatra painted their lower eyelids green and the upper lids, lashes and eyebrows black. The palms of their hands and the soles of their feet were dyed with henna.—*Encyc. Brit.*

*Vessels which have held the Blue Riband.

From Rich Richard's Almanac

Too many cooks steal the broth, the milk, and whatever else is in the icebox.

Early to bed and early to rise,
And you'll never meet any Prominent Guys.

A hair on the head is worth two on the brush.

Better half a loaf than no vacation.

Garden hint: Take care of the peonies,
and the dahlias take care of themselves.

In summer when the nights are hot,

Work is a thing that I do not;

In fall, in winter, and in spring

I do not ever do a thing.

April

Whan that Aprille with his shoures swot
The drought of Merch hath perced to th
rote,

Than longen folk to hear the fieldes call
And gon to see yong men play games c
balle.

Vanisht is Winter with his chill and strife
Aprille ben swell month, thou betst th
life.

ON USING THE CALENDAR PAGES

Sun fast and sun slow. This is the equation of time, as discussed in our section, Kinds of Time.

Sunrise and sunset. For accurate results, two corrections to the tabular values are necessary: (1) interpolation for latitude, and (2) reduction to standard time. When the observer is at a latitude between two given latitudes, he computes a time for sunrise or sunset that lies between the times shown for the given latitudes. (Our table of longitudes and latitudes is a guide for one's position, but a large atlas may be consulted.) For example, on Feb. 7, the sun rises at 7:04 at lat. 40° and at 7:14 at lat. 45° , the difference being 10^m . An observer at Fort Wayne, Ind. (lat. $41^\circ 4'$) would be about $1/5$ the distance between 40° and 45° . $(1/5)(10^m) = 2^m$; hence at Fort Wayne sunrise occurs at $7:04 + 2^m = 7:06$ A.M., L. C. T. [New York City is essentially $1/6$ the distance between 40° and 45° , Chicago about $2/5$ of the way, etc.]

In the sun and moon tables, the data has to be given in LOCAL CIVIL TIME. This is *not* standard time, but has to be reduced to standard time by the rule in Kinds of Time.

Moonrise and moonset. For accurate results at any station in the U. S., three corrections are needed: (1) interpolation for latitude, (2) correction for longitudes west of $82\frac{1}{2}^\circ$, and (3) reduction to standard time.

(1) Interpolation for latitude follows the same method as for the sun.

(2) Use of the *a-factor*. The moon tables are exact for the given latitudes and for longitude 75° W. The *a-factor* adapts them to any longitude in the U. S. For observers in the eastern states and as far west as long. $82\frac{1}{2}^\circ$ [Port Huron, Mich., Mansfield, O., Huntington, W. Va., Asheville, N. C., Tampa, Fla.], no *a-factor* is used. For stations in the 90° zone, between $82\frac{1}{2}^\circ$ and $97\frac{1}{2}^\circ$, use the *a-factor* in the column "90". The "*a-factor, moonrise*" is always to be added to the time of moonrise as derived from the main tables, and the "*a-factor, moonset*" is added to the time of moonset as derived. The boundary at $97\frac{1}{2}^\circ$, between the 90° and the 105° zones, runs through Grafton, N. D., Webster, S. D., Norfolk, Neb., Salina, Kan., Oklahoma City, Okla., Fort Worth and Corpus Christi, Tex.

Observers in the 105° zone, between $97\frac{1}{2}^\circ$ and $112\frac{1}{2}^\circ$ long., will use the " 105° *a-factor*," and those west of $112\frac{1}{2}^\circ$ will use the " 120° *a-factor*," the eastern boundary ($112\frac{1}{2}^\circ$) of the 120° zone going through Butte, Mont., Pocatello, Id., Panguitch, U. and Prescott, Ariz. These zones do *not* correspond to the irregular divisions of the standard-time belts.

(3) Change L.C.T. obtained, to standard time by the rule in Kinds of Time.

Example: find moonrise on Mar. 4, 1941 at Eugene, Ore. (long. $123^\circ 5'$ W., lat. 44° N.). (a) Moonrise time for 40° is 3:04 P.M. for 45° , 2:47 P.M.; difference is -17^m . Eugene is $4/5$ the difference from 40° to 45° hence $(4/5)(-17^m) = -13\frac{3}{5}^m$ or -14^m ; $3:04 - 14^m = 2:50$ P.M. (b) Add *a-factor* moonrise, for the 120° region: $2:50 + 9^m = 2:59$ P.M., L.C.T. (c) Reduce to standard time: $123^\circ - 120^\circ = 3^\circ$; hence Eugene is 3.1 W. of the standard meridian; $3.1(4^m) = 12^m.4$; $2:59$ P.M. $+ 12^m = 3:11$ P.M., P.S.T.

Moon's transit. This data indicates the local civil time of the moon crossing the observer's meridian. The time is the same for all latitudes. It is nearly correct for all longitudes in the U. S.; for more exact work use—for every day—a mean *a-factor* of 2^m , 4^m , 6^m . That is, for the 75° zone, use no correction; for the 90° zone add 2^m ; for the time in the tables; for the 105° zone add 4^m ; for the 120° zone add 6^m . Afterward, reduce the L.C.T. to standard time.

Tides. Inasmuch as the time of tide varies considerably from port to port, even over short distances, it is impossible to offer tidal data covering a coast adequately. We give the times of high and low water for one Atlantic and one Pacific port, standard time. For a few other selected ports we give corrections to be applied to the main tide tables. For example, on a day the times of high and low tides at Boston, Mass., occur, on the average, about $2^h 45^m$ later than the corresponding times for New York, so the $2^h 45^m$ is a constant correction to be added to the New York data for Boston. For tides at Santa Cruz, Cal., subtract $1^h 10^m$ from the time of tide for San Francisco. Tide corrections at a time in main tide tables furnished by U. S. Coast and Geodetic Survey, Washington, D. C. Complete tidal data for all ports of both oceans available at U.S.C.G.S.

Kinds of Time

Of the three main kinds of time (sidereal, apparent solar, and mean solar), the two kinds used in our calendar pages (local civil and standard time) are both types of mean solar time.

Sidereal time is used mostly in astronomy. It is nearly but not exactly star-time, and is measured by the diurnal rotation of the vernal equinox point in the sky. Sidereal days are shorter than solar days by about 3^m 56^s of mean time.

Apparent solar time is measured by the apparent diurnal rotation of the sun, and the hour-angle of the sun +12^h. When the sun is at lower transit we have 0^h by apparent time; when it is on the upper meridian the apparent time is 12^h. The sun is not a good timekeeper, its eastward motion along the ecliptic being somewhat irregular, so apparent days are of unequal duration.

Mean solar time is the hour-angle of the mean sun +12^h. The mean sun is an imaginary body moving uniformly along the celestial equator. When the mean sun is on the lower meridian, the mean time is 0^h. The actual sun is sometimes ahead of and sometimes behind the mean sun, and the difference at any moment is the *equation of time*. When the sun is west of the mean sun, we have the "sun fast" situation, and the sun crosses the meridian before the mean sun; when the sun is east

of the mean sun, we have the "sun slow" condition, and the sun transits after the mean sun. The equation of time helps in conversion of apparent and mean solar time. No clock runs on apparent time but ordinary clocks keep mean solar time in some form.

Local civil time (L.C.T.) is the mean solar time of a designated meridian, and its day begins with the mean sun at lower transit. This is midnight, the moment of *zero hour* (0^h). Ordinary clocks are not set to local civil time, because this time—at any instant—varies with any change of longitude.

Standard time is the local civil time of a standard meridian, but used over an entire time-zone. In the U. S. the four zones (Eastern, Central, Mountain, and Pacific) are based upon the standard meridians of 75°, 90°, 105°, and 120° respectively. Ordinary clocks run on standard time, a type of mean solar time. In the summer, in certain localities, they run on advanced time (as daylight saving time) but this is only a clock-setting, and is actually standard time. Daylight saving time for a certain zone is the normal standard time of one zone to the east. While popular in certain metropolitan areas, it is not used for scientific observations. Advanced time is 1^h later on the clock-face than the normal standard time of the same zone.

To reduce local civil time to standard time, decrease the L.C.T. by 4^m for every degree the station is east of the standard meridian, or increase the L.C.T. by 4^m for every degree the station is west of the standard meridian.

Morning and Evening Stars, January 1947

Morning stars: MERCURY, to Jan. 23. VENUS, in Ophiuchus, north of Antares, Jan. 15. MARS, beginning Jan. 6. JUPITER, in Libra. SATURN, to Jan. 26.

Evening stars: MERCURY, beginning Jan. 23. MARS, to Jan. 6. SATURN, beginning Jan. 26.
On meridian Jan. 29, at 0^h a.m., L.C.T.

Of Jupiter's 11 moons, the 4 discovered by Galileo are as large as or larger than our moon; but the others are considerably smaller, being mostly but a few miles in diameter. The 5th satellite is 112,600 miles from the primary, the 9th nearly 15,000,000 miles away.

The finest star cluster visible to northern observers is the great globular cluster *Messier 13* in Hercules. In a telescope of 12 inches or larger aperture *M 13*, composed of myriads of stars, is of entrancing beauty. 50,000 stars have been counted in photographs of the cluster and these represent only the brightest stars. It is believed that altogether it may contain 1,000,000 stars. Its distance is about 31,000 light-years.

Morning and Evening Stars, February 1947

Morning stars: VENUS. In Sagittarius, Feb. 15. MARS. Near the sun, morning sky. JUPITER. In Libra. On meridian Feb. 15 at 6 a.m., L.C.T.

Evening stars: MERCURY. Eastern elongation, Feb. 21. SATURN. In Cancer. On meridian Feb. 11 at 11 p.m., L.C.T.

The four largest asteroids or minor planets in order of size are Ceres, Pallas, Vesta, and Ceres, the largest, is about 480 miles in diameter, Pallas 300. Vesta, while not the brightest of all, barely attaining at times naked-eye visibility, under ideal conditions of observing. At certain times Vesta can be observed with binoculars and followed for months in its apparent course among the stars. A 5-inch telescope exhibits orange or pinkish color of the small planet.

Morning and Evening Stars, March 1947

Morning stars: MERCURY, beginning Mar. 8. VENUS. In Capricornus, Mar. 15. MARS. In Aquarius, Mar. 15. JUPITER. In Libra, near Scorpius. On meridian Mar. 18 at 4 a.m., L.C.T.
Evening stars: MERCURY, to Mar. 8. SATURN. On meridian Mar. 12 at 9 p.m., L.C.T.

The deepest formation on the moon is probably the mountain-walled enclosure *Newton*, near the lunar south pole. The crater is about 140 miles across, and surrounded by high mountains rising to a height of 24,000 feet from the bottom of the interior. From the deepest spots, it is likely that the sun and the earth are forever invisible.

In spite of the nearness of Venus, practically nothing can be seen on its surface, because of the deep layer of clouds perpetually overlying the surface. Hence the rotational period cannot be determined with certainty. By indirect methods an indefinite period of a few weeks is found.

Morning and Evening Stars, April 1947

Morning stars: MERCURY. Western elongation, Apr. 5. VENUS. In Aquarius, Apr. 6. In Pisces, Apr. 24. MARS. In Pisces. JUPITER. In Libra. On meridian Apr. 16 at 2 a.m., L.C.T.
Evening star: SATURN. In Cancer. On meridian Apr. 11 at 7 p.m., L.C.T.

The *white-dwarf* stars are extraordinary objects. They are the densest bodies in the universe, the average density being 100,000 times that of water. The density at a white-dwarf's center may be many million times that of water, and it is believed that the temperature here reaches a few million degrees. A good example is the companion of Sirius. The nearest star (outside of the sun) is a bright double star, *Alpha Centauri*, seen best in south latitudes. Its distance is 4.3 light-years.

Contrary to public opinion, the 200-inch telescope will be little used for planetary observation; medium telescopes are more adapted to this.

Morning and Evening Stars, May 1947

Morning stars: MERCURY, to May 15. VENUS. In Pisces and Aries. MARS. In Pisces and Aries. JUPITER, to May 14.

Evening stars: MERCURY, beginning May 15. JUPITER, beginning May 14. On meridian May 13 at 0^h L.C.T. SATURN. On meridian May 30 at 4 p.m., L.C.T.

According to the theory of the expanding universe, the speed of receding extra-galactic nebulae is such that the radius of the universe doubles every 1,300,000,000 years; but this idea is rather speculative.

The last great comet to appear in the sky was the magnificent *Halley's Comet* (1910). This comet is now out beyond Neptune's orbit and will reach aphelion in 1948, after which it will be approaching the sun again, and will continue toward next perihelion, which is scheduled for Feb. 1986.

Morning and Evening Stars, June 1947

Morning stars: VENUS. In Taurus, between Aldebaran and the Pleiades, June 15. MARS. In Aries and Taurus.

Evening stars: MERCURY. Eastern elongation, June 17. JUPITER. In Libra. On meridian June 9 at 10 p.m., L.C.T. SATURN. In Cancer.

The *Zodiacal Light* is a faint triangular shaft of light occasionally observed in the west after sunset or in the east before sunrise. With its base at the horizon, it extends for a distance along the ecliptic. It is a ghostly and mysterious object and is thought to be a great cloud of scattered dust particles with its center at the sun and extending outward along the plane of the earth's orbit to a distance beyond the earth.

Morning and Evening Stars, August 1947

Morning stars: MERCURY, to Aug. 29. Western elongation, Aug. 3. VENUS. Near the sun.

MARS. In western Gemini, Aug. 15. SATURN, beginning Aug. 5.

Evening stars: MERCURY, beginning Aug. 29. JUPITER. On meridian Aug. 8, at 6 p.m., L.C.T.

SATURN, to Aug. 5.

our Galaxy, to which the earth, the sun and other solar systems belong, is the *Milky*, an immense assemblage of stars, resembling other spiral galaxies seen far out in space. The diameter of the Milky Way is about 100,000 light-years.

S Doradus, a variable star, is one of the most luminous stars known. Being a variable its light fluctuates (from 8th to 9th magnitude), but its average brightness is 500.0 times that of the sun. It is so large that it would more than fill the space enclosed the earth's orbit.

Morning and Evening Stars, September 1947

Morning stars: VENUS, to Sept. 3. MARS. In Gemini and Cancer. Conjunction with Pollux, Sept. 19, Mars 6° south. SATURN. in Cancer and Leo.

Evening stars: MERCURY. Conjunction with Spica, Sept. 26, Mercury 1° north. VENUS, beginning Sept. 3. JUPITER. In Libra.

The most favorable time to observe our neighbor planet Mars is during an opposition, when the sun, the earth, and Mars are on a straight line. But due to Mars' eccentric orbit, the distance at opposition varies from about 34,600,000 miles to 62,900,000 miles. The most favorable opposition is in August 1956, when Mars will assume nearly the minimum distance.

Morning and Evening Stars, October 1948

Morning stars: MARS. In Cancer. On meridian Oct. 21 at 7 a.m., L.C.T. SATURN. In Leo. On meridian Oct. 15, at 8 a.m., L.C.T.

Evening stars: MERCURY. Eastern elongation, Oct. 13. VENUS. In Virgo, east of Spica, Oct. 15, evening sky. JUPITER. In Libra, near Scorpius.

The crater-formation *Aristarchus* is the brightest object on the moon's surface. It is brilliant that it can often be seen when the entire region around it is in shadow, that when it is nighttime there.

Comets are made of extremely light, tenuous material. *Brook's Comet* of 1886 passed close to Jupiter—even through Jupiter's system of satellites—but effected no change in the planet's orbit, whereas the period of the comet's orbit around the sun was altered from 29 years to 7 years.

Morning and Evening Stars, November 1947

Morning stars: MERCURY, beginning Nov. 5. Western elongation, Nov. 22. MARS. In Leo.
Conjunction with Regulus, Nov. 27, Mars 2° north. SATURN. On meridian Nov. 16, at 6 a.m., L.C.T.

Evening stars: MERCURY, to Nov. 5. VENUS. In Ophiuchus, Nov. 15. Conjunction with Antares, Nov. 13, Venus 4° north. JUPITER. In Scorpius, near the sun.

De Chéseaux's Comet of 1744 was extraordinary in that it had six tails. Rising before the sun in March they were an interesting sight. Borelly's Comet of 1903 likely has the record: it showed nine tails on a photographic plate but they were faint and could not be seen with the unaided eye.

Morning and Evening Stars, December 1947

Morning stars: MERCURY. MARS. In Leo. On meridian Dec. 14 at 5 a.m., L.C.T. JUPITER, beginning Dec. 1. SATURN. In Leo. On meridian Dec. 2, at 5 a.m., L.C.T.

Evening star: VENUS. In Sagittarius, Dec. 15.

Mira, *Betelgeuse*, *Antares*, *Alpha Herculis*, *Beta Pegasi*, and *Epsilon Aurigae* are the largest stars known. The diameters of the first 5 are between 100 and 500 times that of our sun. The diameter of the last one is immense; it is calculated from the light-curve as 2800 times the sun's.

Standard Time and Time Differences

Standard time, the base used for telling time throughout the world, has been adopted by action of the individual nations. The United States took legislative action in 1918 to recognize standard time after it had been used here for 35 years.

The International Meridian Conference, held in 1884 at Washington, D. C., established the meridian passing through Greenwich, England, as the prime meridian, from which the world's time was to be reckoned. For every 15 degrees of longitude, east or west of Greenwich a time change of one hour results.

TIME ZONES. The 15-degree measurement, divides Europe into three time zones—Greenwich, Mid-European (1 hour faster) and East-European (2 hours faster). The United States is divided into four time zones—Eastern, Central, Mountain, and Pacific. The Eastern Time Belt is 75 degrees west of (and 5 hours slower than) Greenwich; the Central Zone, 6 hours slower, the Mountain Zone, 7 hours and the Pacific Zone, 8 hours slower. When it is 10 A.M. in Greenwich it is 5 A.M. in New York, 4 A.M. in Chicago, Ill., 3 A.M. in Denver, Col. and 2 A.M. in San Francisco, Calif.

DAYLIGHT SAVING TIME was begun during World War I. It called for the advancement of clocks by one hour in order to conserve fuel and gain more use of daylight. During World War II daylight saving time was called "war time" and was used all year instead of in summer only. With the exception of five states, Connecticut,

Massachusetts, New Hampshire, and New Jersey, there is no law compelling any community to use daylight saving time. Each locality may decide the issue for itself.

The International Date Line is 180 degrees from Greenwich, or halfway around the world. A person traveling to Australia from the United States must add a day when crossing the line and must subtract a day when traveling in the opposite direction. The International Date Line does not follow the 180th meridian throughout its length. In order to keep all islands of certain groups on the same day of the week, it was necessary to move it off the 180th meridian. It turns east to keep Alaska to the east and Asia to the west. It then turns west to keep the Aleutians to the east. The line then follows its normal 180-degree course until just below the equator, where it swerves to include all of the Samoan Islands to the east and the Fiji Islands to the west. Thereafter, it stays on 172° 30' until in the region of New Zealand, where it resumes the 180° meridian.

ARMY-NAVY TIME. The 24-hour clock system was adopted by the U. S. Army in 1942. The Navy had already copied this system from the British many years before. The day starts at midnight and the hours around the clock are numbered consecutively. From midnight until 12:59 P.M. the hours correspond to the normal system of telling time. Four A.M. is read as 0400, and 12:59 P.M. is 1259; 1 P.M., however, is 1300; 11 P.M. is read as 2300. Odd hours, such as 6:37 P.M. are as 1837.

Time Differences

Twelve o'clock Noon United States Eastern Standard Time Compared with Clocks in Foreign Cities:

WORLD CALENDAR

Exposition

The perpetual World Calendar divides the year into equal quarters of 91 days, or thirteen weeks, or three months, or approximately one season. The first month in each quarter contains 31 days. The other two months have 30 days each, every month having twenty-six weekdays plus Sundays. Every quarter with its monthly arrangement of 31-30-30 days begins on a Sunday, the first day of the week, and ends on a Saturday, the seventh day of the

week, which is easy for business, accountants and educators because the closing day of every quarter does not fall on a Sunday. Every year begins logically on the accepted first day of the week, a Sunday, January 1. This plan retains the customary arrangement of weekdays.

The 364-day year is not complete however. The 365th day of the year, essential in keeping the calendar in step with the seasons, is the logical Year-End World

Holiday, dated W or December 31, that follows Saturday, December 30, every year. By giving the 365th day, the Year-End World Holiday, a name and date, a blank date is avoided. This World Holiday is an integral part of the year; it belongs to and completes the calendar.

The extra day in leap years is the Leap-Year World Holiday, dated W or June 31, and follows Saturday, June 30. By placing these two stabilizing days, the Leap-Year World Holiday in leap years at the end of

the second quarter and the Year-End World Holiday every year at the end of the fourth quarter, the calendar in leap years becomes balanced, each half-year having 183 days. The calendar is thus a stable, balanced, well-coordinated time system, comparable from year to year.

Fourteen nations have already approved the World Calendar, including Brazil, Chile, China, Norway, Greece, Peru, Spain, Turkey and Uruguay.

																				+W

*The Year-End World Holiday, W or December 31 (365th day), follows December 30 every year.
†The Leap-Year World Holiday, W or June 31 (an extra day), follows June 30 in leap years only.

The Seasons, 1947

(Eastern Standard Time)

	d	h	m	
Mar. 21	6	13	A.M.	Sun enters sign of Aries; spring begins in northern hemisphere.
Jun. 22	1	19	A.M.	Sun enters sign of Cancer; summer begins in northern hemisphere.
Sept. 23	4	29	P.M.	Sun enters sign of Libra; autumn begins in northern hemisphere.
Dec. 22	11	43	A.M.	Sun enters sign of Capricornus; winter begins in northern hemisphere.

Astronomical Constants

1 light-year	5,880,000,000,000 mi.
velocity of light	186,273 mi/sec
astronomical unit or distance earth-to-sun	93,003,000 mi.
mean distance, earth to moon	238,860 mi.
general precession	50" .26
obliquity of the ecliptic	23° 27' 8".26—0".4684(t—1900)*
equatorial radius of the earth	3963.34 statute mi.
polar radius of the earth	3949.99 statute mi.
earth's mean radius	3958.89 statute mi.
oblateness of the earth	$\frac{1}{297.0}$
equatorial horizontal parallax of the moon	57' 2".70
sun's diameter	865,380 mi.
sidereal year	365 ^d .2564
tropical year	365 ^d .2422
sidereal month	27 ^d .3217
synodic month	29 ^d .5306
sidereal day	23 ^h 56 ^m 4 ^s .091 of mean-solar time
mean-solar day	24 ^h 3 ^m 56 ^s .555 of sidereal time

*t refers to the year in question, for example 1946.

Planet Table

	Mean distance from sun, in millions of miles	Period of revolution around the sun	Eccentricity of orbit	Inclination to ecliptic	Diameter	Period of rotation on axis	Inclination of equator to orbit plane	Surface gravity (earth = 1)	Oblateness	Mean velocity in orbit	Known moons

Pluto.....	3666	247 ^y .697	0.25	17 9	5900	??	??	??	??	1½	0

NOTE: The rotation of Venus is uncertain, but is probably a few weeks or months. The equatorial diameters of the earth, Jupiter, and Saturn are given; the polar diameter of the earth is 7900.0 mi., of Jupiter 82,789 mi., and of Saturn 67,170 mi. The above table was taken from *New Handbook of the Heavens*, 2d ed. (McGraw-Hill Book Co.).

One of the most beautiful spectacles for telescopic observation is Saturn when the planet is in such a position that its rings present their broadest aspect, at which time the planet is three times as bright as when the rings are presented edgewise.

In fact, when the rings are edgewise they are not visible through small telescopes. The rings are composed of millions of particles in a flattened circular band about 41,500 miles from inner to outer edge and not more than 10 miles in thickness.

Symbols

Planets, etc.

☉ the sun	♄ Saturn
☾ the moon	♅ Uranus
☿ Mercury	♆ Neptune

Eclipses in 1947

(1) *Total eclipse of the sun, May 20.* This is visible in South America and Africa. The path of totality begins in the Pacific Ocean, approximately 300 miles west of Concepción, Chile; it travels across Chile, Argentina, Paraguay, and part of Brazil. The path then crosses the Atlantic and enters Africa at Liberia; it goes eastward along the coast and crosses French Equatorial Africa and Belgian Congo; it ends near Nairobi, Kenya. The longest duration of totality (5m 14s) takes place in the Atlantic, while at Santiago, Chile, totality lasts 2m 23s, and at Bahia [São Salvador], Brazil, 4m 16s. The sun is in partial eclipse from all stations in South America south of a line from Guayaquil, Ecuador, to the mouth of the Orinoco River.

The path of totality, about 100 miles in width, enters the coast of South America at Pichilemu, Chile, and the center-line of the shadow passes over or close to the following stations: Santiago, Chile (at 8:10 A.M., 60th-meridian time), Mendoza, Tostado, and Corrientes, Argentina; Villarica and Armisticio, Paraguay; Santa Helena, Brazil (at 9:20 A.M., 45th-meridian time), Agua Boa, Ibiá, Chapada de Conquista, Santarem, and Bahia, Brazil (the time at Bahia being 9:49 A.M., 45th-meridian time).

(2) *Partial eclipse of the moon, June 3.* This is invisible in North America. In general, the eclipse is visible in the South Atlantic, Europe, Africa, Asia, the Indian

Ocean, Australia, Antarctica, and the western Pacific Ocean. The eclipse is a small one, only about 0.02 of the moon being covered by the shadow of the earth. Mid-eclipse occurs at 11:15 P.M., 60th-meridian-east standard time (2:15 P.M., E.S.T.).

(3) *Annular eclipse of the sun, November 12.* In the annular phase, this is visible in northern South America, and in the partial phase, in the western and south-western parts of North America and the greater part of the northern half of South America. The path of the annular eclipse begins in the Pacific, south of the Aleutian Islands, and goes southeastward and eastward, entering the coast of Peru at Lobitos at 4:40 P.M., 75th-meridian time. It ends in Brazil at a point approximately 670 miles N.W. of Manaus. The maximum duration of the annular phase (4m 3s) occurs in the Pacific, west of the Galápagos Islands. At Lobitos, the duration is 3m 40s.

The northern and western parts of South America are under the partial phases, as far south as a line from Concepción, Chile, to Porto Alegre, Brazil, and as far east as a line from Belém to Porto Alegre. The middle of the partial phases in the United States occurs at the following stations at the indicated times, and with the tabulated magnitudes of eclipse—the magnitude being the proportion of the solar disc eclipsed:

Station	Time	Mag.	Station	Time	Mag.
Portland, Ore.	11:03 a.m., P.S.T.	0.28	Phoenix, Ariz.	12:30 p.m., M.S.T.	0.31
Berkeley, Cal.	11:05 a.m., P.S.T.	0.39	Denver, Col.	12:42 p.m., M.S.T.	0.14
Sacramento, Cal.	11:06 a.m., P.S.T.	0.37	St. Louis, Mo.	2:22 p.m., C.S.T.	0.05
Carson City, Nev.	11:09 a.m., P.S.T.	0.33	Little Rock, Ark.	2:24 p.m., C.S.T.	0.11

A curious thing about comets is that that tails always trail from the head in a direction away from the Sun, so that when a comet is moving away from the Sun, the tail stretches out in front of the head. A comet's tail is so tenuous as to be almost

a vacuum. The Earth passed through the tail of Halley's Comet in May, 1910, and on that occasion astronomers heard nothing, felt nothing and saw nothing to indicate that such passage had any observable effect on the Earth.

Astronomical Data

The Sun

There are countless millions of far distant, superheated, self-luminous gaseous bodies called stars and each one is in itself a sun. Our Sun—the star around which our whole solar system revolves—is at a mean distance of 93,003,000 miles from the Earth, has a diameter of 865,400 miles, a surface temperature of about 11,000° F. and an interior temperature estimated at millions of degrees. It has a surface area approximately 12,000 times that of the Earth and in volume or bulk it is about 1,306,000 times the size of the Earth. It is, nevertheless, a star of only average size and temperature.

The Sun rotates on its axis and, by observation of Sun-spots (great whirling storms in the Sun's atmosphere) and Faculae (bright streaks or areas on the Sun's surface), astronomers have discovered that the rotational speed varies from approximately 26½ days at its equator to

approximately 34 days near its poles. The Sun is just one star of the great Milky Way Galaxy that is rotating on its galactic axis at a rate that gives the Sun a galactic traveling speed of 175 miles per second. Furthermore, the Sun is moving toward a point known as "the apex of the Sun's way" in the constellation Hercules at a speed of about 12 miles per second.

What we see when we look at the Sun is the glowing surface called the Photosphere. Extending above this surface is the Sun's atmosphere consisting of two layers, one extending outward for a few hundred miles from the Sun's surface and called the Reversing Layer for spectroscopic reasons, the other an outer layer extending several thousand miles and called the Chromosphere because of its reddish color due mostly to superheated hydrogen, helium and calcium. Solar "prominences" occasionally burst out from this layer and

extend hundreds of thousands of miles above the Sun's surface. Beyond these layers of solar atmosphere and extending to great height is the outermost observable solar feature, the magnificent Corona of exceedingly slight density that provides an awesome spectacle for observers during total eclipses of the Sun.

Comets

In ancient times comets were supposed to be omens of sudden death, war, revolution or other dire events in human affairs and practically nothing was known of their true nature. They still offer puzzling problems to modern astronomers and, with about 1000 listed, new ones are being discovered and charted each year. In general, comets consist of a nucleus (sometimes lacking) surrounded by a head or "coma" (from the Greek word for hair because of its hazy appearance) from which extends the great tail that makes the passage of a comet through our skies such a striking spectacle. Comets come in varying sizes but the average diameter of the heads of

a large number of observed comets is about 80,000 miles and the tail length may stretch out to more than 100,000,000 miles. The density of comets is so low, however, that we can see the stars through them and there is more actual material in one cubic inch of ordinary air than in 2000 cubic miles of the tail of a comet.

The luminous tails of comets were believed, for many centuries, to be merely clouds high in our atmosphere. Tycho Brahe, eccentric Danish astronomer, proved that the comet he observed in 1577 was a celestial object far beyond the limit of the Earth's atmosphere. But the great forward step in the study of comets came when Edmund Halley, who became England's Astronomer Royal, carefully observed a comet in 1682, checked with previous observations, calculated its orbit and predicted its return to our skies in 1758 or 1759. Halley died in 1742 but the comet, now named after him, reappeared on schedule and a search through ancient records indicated that it had been observed in repeated appearances as far back as 240

B. C. Its last appearance was marked by its perihelion passage in 1910 and its next visit to our skies will occur in 1986. Halley's fulfilled prediction was the first definite proof that comets have regular orbits and time schedules or are, as the astronomers say, "periodic". The known "periods" (time intervals between appearances) of comets vary from the 3.3 years of Encke's Comet to thousands of years for wider travelers. No known bright comets are scheduled for appearance in our sky this year.

The Polar Auroras

It has been definitely established that Sun-spots are the direct cause of the greatest electrical show on Earth, a double feature, the Aurora Borealis (Northern Lights) and the Aurora Australis (Southern Lights). Sun-spots are magnetic storms of vast dimensions on the surface of the Sun and they shoot out electrified particles into space. Those that come toward the Earth are drawn toward the Earth's magnetic poles and consequently these magnetic poles are the radiating centers of

those spectacular electromagnetic displays in the sky that we commonly call the "Northern Lights" or the "Southern Lights", depending upon whether we see them in the northern or southern hemisphere. The electrical particles from the Sun-spots strike the upper regions of our atmosphere where the component gases (nitrogen, oxygen and extremely minor amounts of argon, helium, neon, hydrogen and carbon dioxide) are very much rarefied and cause them to vibrate and glow in colors characteristic of the various elements, just as a neon sign glows when an electric charge is passed through it. The Sun-spots that cause auroral displays also cause the magnetic storms that interfere with radio reception, telephone, telegraph and cable traffic and other electromagnetic devices such as compasses and various aviation accessories.

There is an almost infinite variety to the auroral display. The lights may sweep across the sky in waves, in streamers or in folds like draped curtains. Or it may be a stationary glow. Sometimes there is little

or no color in these waves, sheets or streamers of light. At other times the lights may be rich in red or green or pastel shades. Rose color and lavender and violet and purple are common. Blue is rare but has been seen. The "Northern Lights" have been seen as far south as New Orleans and the Florida peninsula and the "Southern Lights" have been seen as far north as New Zealand and Australia, but the maximum occurrence of these auroral displays is along the borders of the Arctic and Antarctic regions. Since these are atmospheric displays, our atmosphere must extend to the extreme height at which auroral lights are observed. Prof. Carl Störmer of the University of Oslo found this to be about 600 miles. He further found that no auroral lights came closer to the Earth's surface than 50 or 60 miles.

The International Date Line

A moment's thought will convince anyone that, since the Sun is always shining on our rotating Earth and thus what we call "daylight" is continuous, there must be some artificial means of separating one day from another for calendar purposes, some point or line at which, by international agreement, a different day begins, otherwise one day would last forever. The International Date Line is the place on the Earth's surface where days begin and end, or the place where, if we are traveling westward, Tuesday morning changes on the tick of midday into Wednesday afternoon. If the date line is crossed from West to East at the same moment, the reverse takes place and Wednesday morning, on the same tick of 12 m., changes to Tuesday afternoon. In one case the traveler may be said to "gain a day" and in the other case to "lose a day". One of Edgar Allan Poe's short stories, "Three Sundays In A Week", is based on this apparent paradox.

The International Date Line coincides, as nearly as practicable, with the 180th Meridian, which lies almost entirely on the waters of the Pacific Ocean. Deviations of the date line from the meridian are merely for the local convenience of inhabitants of island groups or land masses traversed by the meridian where one time belt is desirable for commercial transactions and domestic life.

The Change of Seasons

It is enough to state that the Earth is nearer to the Sun in January than it is in July to convince those who live in the northern hemisphere that there must be some other explanation than that for the seasonal changes on our globe. The reason for the change in seasons is that the axis of rotation of the Earth is tipped to the plane of its orbit around the Sun at an angle of approximately $23\frac{1}{2}$ degrees (more

accurately, it varies in 1947 from $23^{\circ} 26' 49''$ to $23^{\circ} 26' 52''$) and consequently there is a proportional shifting of the angle of the Sun's rays falling on different portions of the Earth's surface at different times in the year.

On or about June 21 the north end of the Earth's axis is tipped to its limit toward the Sun. In the northern hemisphere this is our Summer Solstice. We then have our longest days and receive a maximum of heat and light from the Sun whose perpendicular rays are falling on the Tropic of Cancer, $23\frac{1}{2}$ degrees north of the Equator. Six months later, on or about Dec. 21, the Earth has reached a position in its orbit that finds the north end of its axis tipped at its maximum away from the Sun. This is our Winter Solstice. We then have our shortest days and receive a minimum of heat and light from the Sun that is hovering over the Tropic of Capricorn, $23\frac{1}{2}$ degrees south of the Equator. Conditions are reversed in the southern hemisphere for obvious reasons. Their Winter is our Summer; their Summer our Winter. Twice a year, at the equinoxes in March and September, the Sun is on the Equator, the day is of equal length all over the world and each hemisphere receives the same amount of light and heat from the rays of the Sun.

If the effect in the change of the angle of the Sun's rays on the Earth's surface were instantaneous, our coldest period would be at the Winter Solstice and our warmest period at the Summer Solstice, but due to the blanket of atmosphere around the Earth and the cumulative effect in the heating or cooling of the Earth's surface, we have "the lag of the seasons" that brings our warmest and coldest periods some five or six weeks after the Sun is "farthest north" or "farthest south".

The Moon

The planet Mars has two tiny satellites or moons, Jupiter has eleven, Saturn nine, Uranus four and Neptune one. The Earth, like Neptune, has one satellite that is uniformly called The Moon. It is a globe of approximately 2160 miles in diameter with a surface deeply pitted by great craters. It has no atmosphere that astronomers can detect and shines only by reflected light of the Sun. Though it seems bright to us at "full moon", it reflects only about 7 percent of the light poured on it by the Sun.

The path of the Moon on its travels around the Earth is elliptical, with the Earth at one focus of the ellipse. The distance of the Moon from the Earth varies from 221,463 miles (perigee) to 252,710 miles (apogee), the average distance being 238,857 miles. The really curious thing about the Moon is that it revolves around

the Earth in 27 days, 7 hours, 43 minutes, 11.47 seconds and *rotates on its axis in exactly the same time*, which is why we always see the same side of the Moon. Due to what are known as "librations in latitude and longitude" and also a "diurnal libration", we do see "around the edge of the Moon" at different times and in this manner a total of 59 percent of the Moon's surface has been observed, but the other 41 percent never has been seen by human eye.

Although the Moon revolves around the Earth in approximately $27\frac{1}{4}$ days, it is, on the average, a matter of $29\frac{1}{2}$ days (29 days, 12 hours, 44 minutes, 2.78 seconds) from one New Moon to the other because the Earth is moving around the Sun while the Moon is moving around the Earth and the "New Moon" depends upon the relative positions of the three bodies. If the planes of orbit of the Earth and the Moon coincided, there would be an eclipse of the Moon at every "Full Moon" and an eclipse of the Sun at every "New Moon", but the (approximately) 5-degree angle between the planes of orbit of the Earth and the Moon causes the Moon on most of its revolutions to miss the Earth's shadow and the Moon's shadow on most trips to miss falling on the Earth. The tidal effects of the Moon are, of course, well known. The "Spring Tides" occur at "Full Moon" and "New Moon" and the "Neap Tides" at "First Quarter" and "Last Quarter".

The Atmosphere

The atmosphere of the Earth—the blanket of air that surrounds our globe and is essential to life—is of interest to astronomers because of its effect on the light that comes to us from heavenly bodies. Air has weight and volume. It refracts (bends or changes the direction of) light rays that enter it. Due to this refraction, we are able to see the Sun and the Moon before they rise and after they set. The "twinkling" of the stars is caused by convection currents in the air that have a rapidly changing refractive effect on the light from the stars. Our twilight is produced by the diffusion in the atmosphere of light from the Sun when it is below the horizon. Meteors become visible when they are heated to incandescence by friction with the atmosphere when, from outer space, they plunge into it at terrific speed.

Prof. Carl Störmer of the University of Oslo estimated the height of the atmosphere at a little more than 600 miles, but about half of it by weight is below 18,000 feet. Although we may remark blandly that something is "as light as air", the Earth's atmosphere in bulk is of such enormous weight that at sea level it exerts a pressure of approximately 14.7 pounds per square inch. At higher levels, of course, the pressure is less.

Chemically, the atmosphere is composed of nitrogen (approximately 78 percent by volume), oxygen (approximately 21 percent by volume), and extremely minor amounts (about 1 percent in all by volume) of argon, neon, helium, hydrogen and carbon dioxide. There is also present in the air a varying amount of water vapor, which is commonly complained of as "humidity" when the percentage is high in warm weather.

Meteors and Meteorites

Meteorites are meteors that have come down to Earth. Meteors are masses of mineral or metal or both that plunge into the Earth's atmosphere at great speed and become incandescent from the resultant friction so that they are seen in the sky as "fireballs" (bolides) or "shooting stars". The "fireballs" are the larger, make a greater flash across the sky and sometimes explode. Meteors come in all sizes but most of them verge on the microscopic and burn up completely in the flash that makes them visible from 40 to 60 miles above the Earth's surface. Millions of them enter our atmosphere every twenty-four hours and probably not more than one or two a day survive to strike the ground as meteorites.

The largest meteorite ever found is located near Grootfontein, Southwest Africa, and its weight is estimated between 50 and 70 tons. The second largest meteorite (the Ahnighito, weight $36\frac{1}{2}$ tons) was found by Admiral Peary, Arctic explorer, at Cape York, Greenland, and is now on exhibition in the Hayden Planetarium, New York City. The largest meteorite found on United States soil is the Willamette (weight $15\frac{1}{2}$ tons), which fell near Portland, Ore., and is now in the American Museum of Natural History, New York City.

Craters produced by the fall of meteorites have been found in many countries. The first to be recognized and the largest known is Meteor Crater in Arizona, a depression about 4,000 feet in diameter, about 600 feet deep, and with exterior walls rising 150 feet above the surrounding plain. Meteor craters have been found near Odessa, Texas; Haviland, Kansas; in the Arabian Desert; in Central Australia and—a notable group of fifty or more—in the region of the Stony Tunguska River in northern Siberia.

Many meteors travel in swarms, believed in some cases to be disintegrated comets. The Persid shower that occurs annually Aug. 10–12 is thought by some astronomers to be all that remains of Tuttle's Comet and the Leonid shower, which reaches a maximum in mid-November every 33 years, similarly is suspected of being what is left of Tempel's Comet. The Leonid shower of 1833 was the greatest meteor display of which astronomers have record.

Important Meteor Showers

Date	Meteor stream	Radiant in constellation
Jan. 1-4	Quadrantids	Bootes
Feb. 5-10	Alpha Aurigids	Auriga
Mar. 10-12	Zeta Bootids	Bootes
Apr. 19-23	Lyrids	Hercules
May 1-6	May Aquarids	Aquarius
May 30	Eta Pegasids	Pegasus
Jun. 27-30	Pons-Winnecke meteors	Draco
Jul. 14	Alpha Cygnids	Cygnus
Jul. 26-31	Delta Aquarids	Aquarius
Aug. 10-14	Perseids	Cassiopeia
Aug. 10-20	Kappa Cygnids	Cygnus
Aug. 21-31	Zeta Draconids	Draco
Sept. 22	Alpha Aurigids	Auriga
Oct. 2	Quadrantids	Bootes
Oct. 9	Giacobinids	Draco
Oct. 18-23	Orionids	Orion
Nov. 14-18	Leonids	Leo
Dec. 10-13	Geminids	Gemini

Projection Planetariums

Dr. Robert G. Aitken, Director Emeritus of the Lick Observatory, called the Zeiss Projector in planetarium use "the most remarkable instrument that has ever been devised to exhibit impressively, and with the illusion of reality, the motions of the heavenly bodies and the phenomena that result from these motions". The first of these projectors was invented and developed by Dr. Walter Bauersfeld at the Carl Zeiss plant at Jena, Germany, and the first planetarium in which it was put to use was in the Deutsches Museum in Munich, May, 1925. Between that time and the outbreak of World War II, twenty-seven other such Zeiss Projectors were constructed and shipped for use in planetariums spread around the world. Five planetariums for the use of the Zeiss Projector were erected in the United States. There were also Zeiss Projector planetariums in Vienna, The Hague, Brussels, Stockholm, Moscow, Paris, Milan, Rome, Tokyo and Osaka. Some smaller planetariums, with other projectors, have been built and are in operation in various places in the United States and Canada.

The Zeiss Projector planetariums in the United States are, in the order in which they were built:

Adler Planetarium, 900 E. Achsah Bond Drive, Chicago 5, Ill.
Director, Wagner Schlesinger.

Fels Planetarium, 20th St., Benjamin Franklin Parkway, Philadelphia 3, Pa.
Director, Roy K. Marshall.

Griffith Planetarium, P.O. Box 9866, Los Feliz Station, Los Angeles 27, Cal.
Director, Dinsmore Alter.

Hayden Planetarium, 81st St., Central Park West, New York 24, N. Y.
Director, Gordon A. Atwater.

Buhl Planetarium, Federal and West Ohio St., Pittsburgh 12, Pa.
Director, Arthur L. Draper.

Astronomical Photography

Since almost all astronomical research is now carried on by photographing the heavenly bodies, cameras and telescopes designed for this purpose are of the utmost importance. The old-fashioned astronomer who made great discoveries by long hours of peering through the eye-piece of his telescope has practically vanished from the great observatories. By photography records are secured that may be studied by other astronomers as well as by the one who made the photograph.

One of the improvements in this field, the Spectroheliograph, was developed about 1890 by two men working independently on the problem at a considerable distance from one another, George Ellery Hale in the United States and H. Deslandres in France. With this instrument the Sun's atmosphere, including the hydrogen prominences, may be photographed on any clear day. Before its invention, astronomers had to wait for a total eclipse of the Sun to make such studies. In 1924 Professor Hale improved the Spectroheliograph to the extent that it is possible to observe the Sun in the light of a single element and to see the prominences on any clear day.

Another advance in photographic instruments has been the designing and developing within the past ten years of the Coronagraph by Bernard Lyot of the Paris Observatory and the Pic du Midi Observatory. With this instrument the Sun's corona may be observed or photographed from high altitudes on any clear day. There is one Lyot Coronagraph installed at the Pic du Midi Observatory, another at Arosa, Switzerland, and another at Climax, Colorado, a station of the Harvard Observatory.

What many astronomers consider the greatest advance in the making of astronomical instruments in the last fifty years was the production of the Schmidt Camera. The details of construction and method of operation of this camera were made known in 1930 by Bernhard Schmidt of the Hamburg Observatory at Bergedorf, Germany. The Schmidt Camera takes photographs with large fields of vision and sharp definition at much greater speed than was possible with earlier apparatus. Schmidt Cameras as fast as $f/0.6$ have been made, and those with a speed of $f/1$ are common. These remarkable cameras have been installed at many observatories in various parts of the world.

Longitude, Latitude, Magnetic Declination of U. S. and Canadian Cities

The last column shows, in degrees, the magnetic declination, which is the angle that the magnetic meridian makes with the true, or geographic, meridian. When the value in degrees is marked w, the north end of the compass needle points west of true north by that number of degrees; when the value is e, the north end of the needle points east of true north by that many degrees.

CHRONOLOGY

GREAT HISTORICAL EVENTS

Compiled by
Encyclopaedia Britannica

Before the Christian Era—(B. C.)

- 4004—Creation of world, according to Archbishop Usher's chronology. (Science estimates earth is at least 2,000,000,000 years old.)
- 4000—The Flood, mentioned in the Bible. (Date set by science; Archbishop Usher fixed it at 2348.)
- 3100–1800—Egyptian pyramids built.
- 2700—Huang-Ti founds Chinese Empire.
- 2000—Indo-Europeans invade northern Greece.
- 1556—Athens, Greece, founded by Cecrops.
- 1400—Moses leads Israelites out of Egypt.
- 1194–1184—*The Trojan War*. Doric Greeks emerge supreme after legendary siege of Troy.
- 753—Rome founded by Romulus.
- 562—Buddha born.
- 551—Confucius born.
- 500—Rise of Maya civilization in Mexico.
- 500–479—*Persian Wars*. Persians, in four expeditions against Greece (493, 490, 480 and 479), fail in efforts at subjugation.
- 490—Battle of Marathon. Greeks under Miltiades defeat Persians.
- 431–404—*Peloponnesian War*. Spartans, under Lysander, take Athens in 404 to become supreme in Greece.
- 390—Barbarian Gauls sack Rome.
- 334–330—Alexander the Great conquers Greece, Persia, Egypt, and part of India.
- 264–146—*The Punic Wars*. Romans, in conquest against Carthaginians, seize Sicily and Spain, and destroy Carthage (later rebuilt by Caesar, destroyed by Arabs in 689 A. D.)
- 45—Caesar becomes dictator for life.
- 44—Caesar murdered, Anthony seizes Rome.
- 32–31—*War between Anthony and Octavius*. Octavius defeats Anthony, conquers Egypt.
- 30—Suicide of Anthony and Cleopatra.

27—Octavius becomes Emperor Augustus; Roman Empire established.

4—Birth of Christ (four years before so-called Christian era).

The Christian Era—(A. D.)

- 29—Crucifixion of Christ. Date set by some scientific calculations; Roman Catholic Church holds that Jesus died on Friday, April 3, 33.
- 64—Rome burns, Emperor Nero blames Christians.
- 79—Pompeii destroyed as Mt. Vesuvius erupts.
- 253–291—*The Franks invade Gaul* and spread over northwest Europe.
- 306—*Constantine the Great, first Christian Emperor, defeats the Franks*.
- 330—Constantine the Great, first Christian Emperor, changes Byzantium to Constantinople and makes it the seat of the Roman Empire.
- 400—Beginning of the Dark Ages. Visigoths overrun Europe.
- 597—Gregory, Bishop of Rome, establishes the Papacy.
- 611—Mohammed proclaims Islamism.
- 625–640—Mohammedanism sweeps the East.
- 700–800—Christianity spreads over northern Europe. Charlemagne founds a new western Roman Empire.
- 930—Vikings establish first parliament in Iceland.
- 982—Erik the Red (Thorvaldson), father of Leif Ericson, discovers Greenland.
- 1000—Leif Ericson sails from Iceland, discovers North American continent.
- 1066—*Battle of Hastings*.
- 1096–1291—*The Crusades*. European Christians, in seven periods of conflict, oppose the Moslems and the Turks, developing commerce and extending Christianity.
- 1206—Mogul (Tartar) Empire established by Genghis Khan.
- 1215—Magna Charta proclaimed at Runnymede, England.

- 1233—Pope Gregory IX establishes Inquisition in Spain.
- 1268—Mongol Emperor Kublai Khan establishes reign at Peking (now Peiping), China.
- 1337-1453—*Hundred Years War*. England loses lands in France.
- 1431—Joan of Arc burned at the stake.
- 1453—*Turks capture Constantinople*.
- 1485—Battle of Bosworth Field. Ends Wars of the Roses. Richard III slain.
- 1492—Christopher Columbus discovers America (Oct. 12).
- 1497—Amerigo Vespucci discovers South America; John Cabot sails from England to Newfoundland.
- 1513—Ponce de Leon lands in Florida (April 8); Balboa discovers Pacific Ocean (Sept. 25).
- 1517—Beginning of the Reformation in Germany.
- 1534—Papal power in England abolished.
- 1522—One of Magellan's ships circumnavigates the globe.
- 1564—Shakespeare born.
- 1571—*Tatars devastate Russia*; Moscow burned.
- 1571—Battle of Lepanto. Don John of Austria routs Turkish fleet.
- 1588—*Spanish Armada* destroyed by British (July 21-29).
- 1607—Jamestown, Va., settled by English Cavaliers under Capt. John Smith.
- 1618-1648—*Thirty Years' War*. German Protestants, England, Holland, France and Sweden against Roman Catholics of Germany and Spain and Italy. Peace of Westphalia ends conflict, Alsace going to France, Swiss independence being recognized, and German secularized states being given religious freedom.
- 1619—First representative assembly in America, Jamestown (July 30); first Negro slaves land in America from Dutch ship at Jamestown (August). First boatload of women landed at Jamestown, Va.
- 1620—Pilgrims land at Plymouth Rock (Dec. 21).
- 1644—Manchu Dynasty established in China, lasting until 1912.
- 1665—The Great Plague in London.
- 1676—Nathaniel Bacon leads Virginia farmers in tax rebellion.
- 1704—British capture Gibraltar from Spain.
- 1752—Benjamin Franklin, flying kite, discovers lightning to be identical with electricity.
- 1756-1763—*Seven Years' War*. France, Austria and Russia against England and Prussia. England wins Canada and supremacy in India and the West Indies, Prussia retaining Silesia.
- 1757—Battle of Plassey. Clive defeats French; marks beginning of British supremacy in India.
- 1765—Stamp Act passed by British Parliament. Stamp Act Congress in New York threatens boycott unless repealed.
- 1773—Boston Tea Party (Dec. 16).
- 1774—First Continental Congress, Philadelphia (Sept. 5).
- 1775-1783—*American Revolution*. Colonies revolt against the British.
- 1775—Battles of *Lexington* and *Concord* (April 19) and *Bunker Hill* (June 17).
- 1776—Declaration of American Independence (July 4); Battle of *Fort Mifflin* (June 28).
- 1777—Congress adopts *Stars and Stripes* (June 14); Battles of *Ticonderoga*, (July 6); *Brandywine* (Sept. 11); *Germantown* (Oct. 4); Burgoyne surrenders at Saratoga (Oct. 17).
- 1778—Battle of *Monmouth* (June 28); *Wyoming Massacre* (July 3).
- 1779—Battle of *Savannah* (Oct. 8-9).
- 1780—Battle of *King's Mountain* (Oct. 7). Maj. Andre hanged (Oct. 2) as spy conniving with Benedict Arnold.
- 1781—Battles of *Cowpens* (Jan. 17); *Yorktown* (Sept. 28-Oct. 19). Lord Cornwallis and British surrender.
- 1783—Peace treaty signed by United States and Britain (Sept. 3). Massachusetts outlaws slavery.
- 1787—U. S. Constitution drawn up at Philadelphia (May 14).
- 1789—First U. S. Congress meets (April 6); Gen. Washington inaugurated as first President (April 30).
- 1789-1799—*French Revolution*. Bastille in Paris destroyed (1789); *war with Germany*, France declared a republic (1792); King Louis and Queen beheaded, Reign of Terror begins (1793); Napoleon Bonaparte heads army; peace with Prussia (1795); *war in Italy* (1796); Napoleon made First Consul of the Republic (1799).
- 1790—Battle of *Poltava*. Russians under Peter the Great defeat Swedes under Charles XII.
- 1801—Britain and Ireland united; first parliament of the United Kingdom.
- 1803-1806—Journey of Lewis and Clark overland to U. S. Northwest.
- 1805—Battle of *Trafalgar*. Nelson's death and great victory over Napoleon (Oct. 21).
- 1807—Robert Fulton launches first steamboat, the *Clermont* (Aug. 17).

- 1812-1814—*War of 1812*. Declared (June 18) by U. S. because of blockade of ports by British, then engaged in struggle against Napoleon; *Fort Dearborn (Chicago) Massacre* by Indian allies of British (Aug. 15); *Detroit* surrendered to British (Aug. 16).
- 1813—Battle of *Leipzig* (Oct. 16-18); defeat of Napoleon.
- 1814—Napoleon deposed (March); Louis XVIII king of France. British burn the White House (Aug. 24); Battle of *Plattsburg* won by Americans (Sept. 11); U. S. signs treaty with Britain at Ghent, Belgium (Dec. 24).
- 1815—Battle of *New Orleans* (Jan. 8, 1815); Napoleon flees Elba (Feb. 26), returns to France (March 1), and is defeated by Wellington in the Battle of *Waterloo* (June 18).
- 1816—Clay's American System (First protective tariff) passed by Congress.
- 1819—The *Savannah* becomes first steamboat to cross the Atlantic, March 28-June 20.
- 1820—Missouri Compromise permits slavery in that state.
- 1823—Monroe Doctrine declares (Dec. 2) that no European power may seize territory or set up a government on American continent.
- 1828—Baltimore & Ohio establishes first passenger railroad in U. S. (July 4).
- 1830—Revolt in France; Charles X flees, Louis Philippe king.
- 1832—South Carolina nullifies U. S. protective tariff law.
- 1835—Texas proclaims independence from Mexico (Nov. 13).
- 1836—Battle of the *Alamo* (March 6).
- 1837—Queen Victoria rules England.
- 1846-1848—*Mexican War*. U. S. declares war (May 13, 1846) in boundary dispute; peace ratified (February, 1848); Texas boundary set at Rio Grande.
- 1848—Gold discovered in California (Jan. 24); French depose Louis Philippe, set up Second Republic.
- 1853—Commodore Matthew C. Perry, U. S. N., meets the Lord of Toda on Kurihama Beach, Japan (July 14), resulting in commercial treaty (1854).
- 1854-1856—*Crimean War*. Russia loses claim to Greek Christians under Turkish flag.
- 1856—John C. Fremont runs as first Republican Presidential candidate.
- 1857—Dred Scott decision of U. S. Supreme Court (March 6) holds a Negro slave not a citizen.
- 1858—Lincoln-Douglas debates in Illinois.
- 1859—John Brown's Raid on Harpers Ferry (Oct. 16).
- 1860—South Carolina secedes from the Union (Dec. 20).
- 1861—Seceding states proclaim Confederacy (Feb. 4); Jefferson Davis president.
- 1861-1865—*American Civil War*. Outstanding events: Battle of *Bull Run* (July 21, 1861); Battle of *Monitor and Merrimac* (March 9, 1862); *Shiloh* (April 6-7, 1862); *Seven Days* battle (June 26-July 2, 1862); *Antietam Creek* (Sept. 16-17, 1862); Lincoln's Emancipation Proclamation (Jan. 1, 1863); Battle of *Chancellorsville* near Kitty Hawk, N. C. (Dec. 17), (May 2-4, 1863), *Gettysburg* (July 1-3, 1863); Grant's capture of *Vicksburg* (July 4, 1863); Battle of *Chickamauga* (Sept. 19-20, 1863); *Lookout Mountain* (Nov. 24, 1863); *Sherman's March through Georgia* (ended Dec. 20, 1864); Battle of *Wilderness* (May 5-6, 1864); *Spotsylvania* (May 10, 1864); surrender of Gen. Lee at Appomattox (April 9, 1865), ending the conflict. Slavery ended and the Union preserved.
- 1865—Lincoln shot fatally on April 14 by John Wilkes Booth, died April 15.
- 1867—Alaska purchased from Russia by the U. S.
- 1869—Central Pacific and Union Pacific rail lines joined at Ogden, Utah (May 10), completing first transcontinental railroad.
- 1870-1871—*Franco-Prussian War*. Ended with Treaty of Frankfurt (May 10, 1871).
- 1871—Great fire in Chicago (Oct. 8-10), 18,000 buildings destroyed.
- 1873—Financial panic in New York.
- 1876—Battle of the *Little Big Horn* in Montana, massacre of Gen. Custer and 276 soldiers by the Sioux (June 25).
- 1881—Czar Alexander II of Russia assassinated by nihilists (March 13); President Garfield fatally shot (July 2).
- 1883—Pendleton Act establishes Civil Service Commission and Merit System.
- 1893—Charles E. Duryea tests first gasoline automobile at Springfield, Mass. (April 19).
- 1894-1895—*Chinese-Japanese War*. Japan wins Formosa.
- 1898—*Spanish-American War*. U. S. battleship *Maine* blown up in Havana harbor (Feb. 15); Dewey destroys the Spanish fleet at *Manila* (May 1); Charge of *San Juan Hill* (July 1);

- Cervera's fleet destroyed off *Santiago*, Cuba, by U. S. ships (July 3); peace signed (Aug. 12) with Spain ceding the Philippines and Puerto Rico. Radium discovered by the Curies.
- 1899—*Boer War* begins (Oct. 11) with resistance of the Dutch to the British government in the Transvaal (Boers surrendered May 31, 1902). Filipinos revolt (June 12); U. S. forces capture rebel leader, Aguinaldo (March 23, 1901).
- 1901—President McKinley fatally shot (Sept. 6); Marconi signals letter "S" by radio from England to Newfoundland (Dec. 12).
- 1903—Wright brothers make first flight near Kitty Hawk, N. C., December 17.
- 1904-1905—*Russo-Japanese War* over conflicts in Manchuria. *Port Arthur* surrendered to the Japanese (Jan. 2, 1905); peace treaty signed (Sept. 5); Japan emerges as a major power.
- 1906—San Francisco destroyed by earthquake and fire (April 18).
- 1911—First transcontinental flight (84 hours' flying time), New York to Pasadena, Calif. (Sept. 17-Nov. 4), by Charles P. Rogers; Roald Amundsen discovers South Pole (Dec. 14).
- 1912—Republic established in China (Feb. 12).
- 1912-1913—*Balkan Wars*. Bulgaria, Serbia, Greece and Montenegro allied successfully against Turkey; later Bulgaria attacked Serbia and Greece.
- 1913—Federal Reserve System established.
- 1914—Archduke Francis Ferdinand of Austria-Hungary assassinated at Sarajevo, Bosnia (June 28) by a Serb student, precipitating World War I.
- 1914-1918—*World War I*. Central Powers (Austria-Hungary, Germany, Bulgaria, Turkey) against the Allies (Serbia, Russia, Great Britain, France, Belgium, Japan, Greece, Rumania, Montenegro, Portugal, Italy and the United States). Underlying cause was German desire for expansion. Outstanding events: 1914—Austria declares war on Serbia (July 28); Germany declares war on Russia (Aug. 1); Britain declares war on Germany; President Wilson proclaims U. S. neutral (Aug. 4); first British Expeditionary Force lands in France (Aug. 16); Germans defeat Russians at *Tannenberg*, East Prussia (Aug. 31); Battle of the *Marne* (Sept. 6-10). 1915—German U-boat blockade of Great Britain begins (Feb. 18); steamship *Lusitania* sunk by German submarines (May 7). 1916—Battle of *Jutland* (May 31); Battles of the *Somme* (July-November); Germans turned back at *Verdun* (Sept. 3). 1917—Germany begins unrestricted submarine warfare; U. S. severs relations (Feb. 3), declares war (April 6); first American troops in France (June 26); first U. S. casualties (Nov. 3). (Among memorable battles in which U. S. troops participated were *Cambrai*, the *Somme*, the *Marne*, *St. Mihiel*, *Belleau Wood*, and the *Argonne*.) 1918—President Wilson's 14 Points of Peace speech (Jan. 8); Battle of the *Somme* (March 21-April 6); Battle of the *Aisne* (May 27-June 5); German retreat across the *Marne* (July 19); U. S. troops take *St. Mihiel* (Sept. 13); Battle of the *Meuse-Argonne* (Sept. 20-Nov. 11); British break *Hindenburg line* (Sept. 27); U. S. troops capture *St. Etienne* (Oct. 6); Allies take *Cambrai* (Oct. 9); Ostend, Bruges, and Lille fall to Allies (Oct. 17); Germans accept Wilson's terms (Oct. 20); U. S. troops reach Sedan (Nov. 7); cease firing order issued, armistice signed (Nov. 11).
- 1914—U. S. troops land at Vera Cruz, Mexico (April 21).
- 1916—Rasputin, the Mad Monk, slain in Petrograd (now Leningrad); Pancho Villa, Mexican robber-general, raids Columbus, N. M. (March 9).
- 1917—*Russian Revolution*. Bolsheviks, under Nicolai Lenin, seize power (Nov. 7).
- 1919—Treaty of Versailles signed (June 28); U. S. Senate rejects League of Nations (Nov. 19).
- 1920—National Prohibition goes into effect (Jan. 16); Woman Suffrage Amendment ratified in U. S. (Aug. 26).
- 1921—U. S., Great Britain, France and Japan agree to naval limitations.
- 1922—Fascist coup in Italy, Mussolini forms cabinet (Oct. 27-29); 14 Russian republics form Union (Dec. 20).
- 1923—Munich beer hall putsch led by Hitler is put down (March 9).
- 1924—Teapot Dome oil scandal.
- 1925—William Jennings Bryan and Clarence Darrow in Scopes evolution trial in Tennessee.
- 1926—Richard E. Byrd flies to the North Pole.
- 1927—Charles A. Lindbergh flies solo across Atlantic (May 20-21).
- 1928—Kellogg Peace Pact signed.
- 1929—German airship *Graf Zeppelin* flies around the world, August.
- 1929—Stock market collapses, depression begins (Oct. 29).

HEADLINES OF THE YEARS

1930-1945

Compiled by

The

NEW YORK

Herald

Tribune

1930 On a crisp fall morning in October, 1929, the N. Y. Stock Market plunged downward. In a few hours, thousands of paper fortunes and some real ones were wiped out. The nation awoke as if at the shrill clatter of an alarm clock. This was the end of an era. Some months before that historic morning in Wall Street, the nation's economic machinery had been creaking ominously and slowing down. Now, as winter came on, unemployment spread, gloom and worry were in the air. In this uneasy atmosphere 1930 came in.

Jan. 9 Humbert, Italian Crown Prince, and Princess Marie of Belgium wed in Rome.

22 George V opens five-power naval parley in London.

26 Primo de Rivera quits after ruling Spain with iron fist 6½ years.

Feb. 2 William Howard Taft, III, resigns as Chief Justice; Pres. Hoover names Charles E. Hughes.

20 Richard E. Byrd and party quit Antarctica after year.

Mar. 6 Communists in nationwide demonstration meet with tear gas at White House.

7 Hjalmar Schacht resigns as Reichsbank head, protesting Young Plan terms.

10 Wickersham Committee reports complete breakdown of prohibition enforcement.

11 Babe Ruth signs biggest contract in baseball history, \$160,000 for 2 years.

13 Discovery of ninth planet (Pluto) announced by U. S. astronomers.

25 German liner *Europa* makes new transatlantic record, 4 days, 17 hours, 6 minutes.

28 William T. Cosgrave resigns as president of Eire after defeat in Eire.

April 20 Charles A. Lindbergh sets cross-continent air record, 14 hours, 45 minutes.

22 Navy pact signed by U. S., Britain, Japan, France and Italy.

May 5 Mahatma Gandhi arrested.

7 Senate rejects John J. Parker for Supreme Court because of anti-labor record.

17 European Federation urged by Aristide Briand in notes to twenty-six nations.

June 14 House passes Smoot-Hawley tariff.

22 Son born to Lindberghs.

July 7 Sir Arthur Conan Doyle, creator of Sherlock Holmes dies, promises to communicate from spirit world. (*Never does.*)

17 Britain rejects Briand's plan for a United States of Europe as unnecessary.

Aug. 17 Dale Jackson and Forest O'Brine set endurance air record—647 hours over St. Louis.

23 Bodies of S. A. Andree and companions who tried to cross North Pole in balloon in 1896 found.

25 Samuel Seabury named to investigate N. Y. C. Magistrates Courts.

Sept. 2 Dieudonne Coste and Maurice Bellonte complete Paris-to-N. Y. non-stop in 37 hours, 17 minutes. J. P. Crater, New York Supreme Court Justice wanted in investigation missing. (*Never found.*)

6 Argentine troops seize capital. 1,100 dead or hurt as Junta ousts Martinez.

23 Soviets selling Old Masters; Mellon buys \$800,000 worth.

27 Robert T. Jones wins golf grand slam by taking U. S. Amateur.

Oct. 5 British air minister and 45 killed as R-101, world's largest airship, crashes over France.

9 Forty-six U. S. warships decommissioned as Navy economizes.

24 Military chiefs seize Rio, capture Brazil's president; mobs riot, twenty-seven dead.

Nov. 2 Haile Selassie crowned Emperor of Ethiopia in barbaric ceremony.

4 Franklin D. Roosevelt reelected Governor of N. Y. Democrats gain throughout nation.

14 Police cars and trucks rush food to 8,849 hungry N. Y. families.

17 Strikes sweep Spain; riots in Barcelona as 200,000 workers quit.

19 Vatican linked by phone to outside world; first call from Cardinal Hayes.

21 Stalin in first interview with U. S. reporter urges U. S. trade with Soviet Union.

Dec. 2 Hoover asks Congress for \$150,000,000 to aid unemployed.

11 New York's Bank of United States, with 62 branches, 400,000 depositors, closed by State—insolvent.

12 Sinclair Lewis, accepting Nobel prize at Stockholm, derides U. S. culture, traditions, standards.

28 Treasury reveals 511 in 1928 had incomes of \$1,000,000 or more; 26 had \$5,000,000 or more.

DIED: Kenneth Hawks, Jan. 2; Mabel Normand, Feb. 23; William Howard Taft, Mar. 8; A. Conan Doyle, July 7.

1931 All the world was restless. Rioting in Cuba and Spain, revolutionary rumblings in South and Central America (the Marines were in Nicaragua), Fascist bluster in Italy told of world-wide ferment in economics and politics. Here in the U. S. the depression deepened. A worried President summoned groups of anxious businessmen to the White House; neighborhood soup kitchens were set up to feed the hungry. Christmas shoppers looked away as they passed jobless, shivering men selling apples on street corners. A song that caught the imagination was "Brother, Can You Spare a Dime?" The answer, as 1931 began, was generally "No."

Jan. 2 Eight U. S. Marines killed, 2 wounded in ambush by Nicaraguan rebels.

9 Soviet budget 16 billions, a world's record, with immense outlays for industry; private trade sinks to vanishing point.

20 Wickersham Board favors dry law revision; Hoover opposes modification, urges further trial of "noble experiment."

29 U. S. apologizes to Italy for alleged slur by Maj. Gen. Smedley Butler on Mussolini.

Feb. 5 Malcolm Campbell sets new speed record in auto, 245.733 miles per hour at Daytona, Fla.

24 Supreme Court holds 18th (Prohibition) Amendment constitutional.

27 The New York *World* suspends; sold by Pulitzers to The *Telegram*.

U. S. Senate passes soldiers' bonus.

Mar. 23 N. Y. Legislature orders investigation of N. Y. City affairs; Gov. Roosevelt calls on Mayor James J. Walker to meet charges.

28 Paul von Hindenburg assumes rule of Reich as dictator "to curb radical excesses."

31 Knute Rockne killed in air crash over Kansas.
1,000 die in earthquake at Managua, Nicaragua.

April 7 Anton J. Cermak elected Mayor of Chicago, defeating "Big Bill" Thompson.

14 Alfonso signs abdication, quits Spain with family. Niceto Alcalá Zamora president.

28 Roosevelt clears Walker; holds charges "too general."

May 1 Empire State, tallest building in world, opens; 102 stories, 1,100 feet.

7 Francis (Two-Gun) Crowley, youthful killer, captured after spectacular battle with N. Y. police.

Arturo Toscanini cuffed, slapped by Italian youths at Bologna for refusal to play Fascist anthem.

28 Auguste Piccard and Henry Kipper up 52,493 feet over Alps in balloon testing stratosphere rays.

30 Mussolini closes "Catholic Action" in Italy charging political activity.

June 6 Navy to drop base at Guam, no longer of military value.

20 Hoover proposes world debt moratorium for one year; Congress backs plan to save Reich.

July 2 Post and Gatty back at Roosevelt Field, completing circuit of globe in 8 days, 15 hours, 51 minutes. Previous record (Graf Zeppelin) 12½ days.

Aug. 9 Revolt fails in Cuba; ex-President Mario G. Menocal, rebel leader, flees.

24 J. Ramsay MacDonald resigns as Prime Minister of Britain.

Sept. 19 Japan seizes Mukden, Manchuria.

Oct. 24 Al Capone gets eleven years and \$50,000 fine for tax fraud.

25 George Washington Bridge opens.

Nov. 4 Japan is cited before League of Nations for trespassing in Manchuria.

5 MacDonald is Prime Minister, Stanley Baldwin is Lord President of Council in Britain.

11 Charles G. Dawes ordered to Paris to aid League in settling Manchurian conflict.

12 \$59,000,000 Naval appropriations slash ordered by Hoover.

29 Japan rejects, while China accepts, League survey in Manchuria.

Dec. 2 Dr. Robert A. Millikan brings from Germany pictures of atom smashing with cosmic rays.

8 Chancellor Heinrich Brüning of Germany slashes wages and prices by decree . . . says he will use martial law to curb Hitler.

22 War debt moratorium is ratified in Senate.

DIED: Nellie Melba, Feb. 22; Ella V. Wendel, Mar. 13; Arnold Bennett, Mar. 27; Knute Rockne, Mar. 31; Nicholas Longworth, Apr. 9; Mrs. White-law Reid, Apr. 29; George F. Baker, May 2; David Belasco, May 14; Ralph Barton, May 20.

1932 People were dissatisfied with Prohibition. The Wickersham Committee survey disclosed the monumental traffic in alcohol, the organized and amply financed gangsterism that everyone knew about. Hoover and Congress vacillated. The Depression still plagued industry, merchandising, real estate. The nation's business seemed stalled on dead center. That gloomy, listless December, the nation's ear was tuned to shuffling cards, and public interest focussed on a bridge table where Sidney Lenz and the Culbertsons played an epic contract bridge match to determine the merits of their systems of bidding.

- Jan.** 9 Bruening notifies world Germany is unable to pay reparations.
 12 Hattie W. Caraway, Ark., elected to U. S. Senate, first woman elected to that body.

- Aug.** 30 Hermann W. Goering elected Reichstag president; Von Papen continued as Chancellor.
 31 Germany demands arms equal to other nations.
- Sept.** 1 Mayor Walker of New York resigns during ouster proceedings before Roosevelt.
 9 39 killed, 72 hurt as ferry blows up in East River.
 30 London: mass demonstrations of hunger marchers stopped by police in Whitehall.
- Nov.** 6 Supreme Court orders retrial of Scottsboro Case.
 8 Roosevelt wins in Democratic landslide: Congress wet, overwhelmingly Democratic.
 22 Roosevelt confers with Hoover at White House.
- Dec.** 5 Repeal loses by six votes in House.
 21 House votes 3.2 beer.

1933 Roosevelt was in; Hoover out. Roosevelt was fitting cabinet pieces together, making plans. Hoover was packing his papers. In the long pause from November to March, the rolls of jobless mounted and the nation grew more jittery. From Germany, increasingly turbulent and truculent, the name "Adolf Hitler" came more and more into the news. It was the year of the N. R. A. and the "blue eagle" and the year Prohibition ended. "The only thing we have to fear is fear itself," said Roosevelt in his inaugural speech.

- Jan.** 4 Iowa farmers threaten to lynch insurance company representative for farm foreclosure.
- 5 Ex-President Calvin Coolidge dies of heart attack at Northampton, Mass.
- 19 Soviet exiles 45,000 Cossacks to Siberia as grain slackers.

- 21 Roosevelt orders silver purchased and coined in new inflation move.
- 22 Crown Prince born to Emperor Hirohito and Empress Nagato of Japan.
- 23 200 dead in French railroad wreck 17 miles east of Paris.
- 24 Assassins stab to death Armenian Archbishop marching to altar in New York church.
- DIED: Calvin Coolidge, Jan. 5; Thos. J. Walsh, Mar. 2; Anton J. Cermak, Mar. 6.

The New Deal delved into the alphabet and came up with multi-lettered agencies. Mr. Roosevelt's resonant voice roused and reassured the nation in fireside chats. The Blue Eagle flapped. People talked about Section 7-A, codes, N. R. A., C. C. C., farm relief, cracking down on chiselers, and boondoggling. The little guy (it seemed) was coming into his own at last. Prohibition was finished. The nation enjoyed its first legal alcoholic holiday in fifteen years. New York had double cause to celebrate: Tammany was out in the cold for the first time since 1918.

- Jan. 4 Roosevelt notifies Congress recovery program will cost \$10,000,000,000 by June 30, 1935.
- 10 Van Der Lubbe, Dutch communist, beheaded for Reichstag fire.
- 11 6 Navy planes fly from California to Hawaii in 24¾ hours.
- 31 Dollar cut to 59.6 cents (gold value).
- Feb. 6 20 dead in Paris riots as Daladier's government resigns.
- 12 France paralyzed by general strike. Civil war in Austria, 500 dead.
- 17 Britain, France, Italy send note to Hitler backing Dolfuss government in Austria.
- 19 Nazis send ultimatum to Dolfuss.
- Mar. 1 Henry Pu-yi becomes Emperor Kang-teh of Manchukuo. (Manchukuo was Japan's new name for Manchuria.)
- 10 Roosevelt orders return of air mail to civilian lines after ten Army casualties in 20 days.
- 15 Samuel Insull, disguised as woman, flees Athens to evade extradition to U. S.

- Nov. 4 Charles Kingsford-Smith flies from Honolulu to California in 14 hours, 59 minutes.
- 6 Democrats gain Congress strength in New Deal election victories;
- 21 Japan asks naval parity; warns of intention to terminate 1922 Washington agreement.
- Dec. 3 France and Germany sign Saar Treaty.
- 5 Russia "purges" [executes] 66 for plotting with Germans against Stalin regime.
- 19 Japanese Privy Council votes to abrogate Washington Naval Treaty of 1922.
- 26 Ethiopia protests to League of Nations against Italian seizures.
- 29 Japan formally denounces 1922 naval treaty.

DIED: Albert I of Belgium, Feb. 17; Wm. H. Woodin, May 3; Von Hindenburg, Aug 2.

1935 In Europe the dictators grew more arrogant. Mussolini cried aloud his dreams of Roman grandeur from the Quirinal balcony. In far-off Ethiopia dark warriors primed muskets and sharpened spears. Hitler eyed Austria and the Ruhr.

But why worry? America was climbing out of the Depression, we hoped, business was stirring and money was channeled through relief rolls to the distressed and the hungry. Except for outraged cries from the Liberty League, the New Deal forged ahead.

- Jan.** 2 Bruno Richard Hauptmann goes on trial at Flemington, N. J., for kidnap slaying of the Lindbergh baby.
- 4 Roosevelt asks 3,500,000 jobs to end dole.
- 7 Oil control unconstitutional, Supreme Court decides in first New Deal test.

- 3 Italians bomb Adowa, kill 1,700.
- 23 Dutch Schultz shot by gangsters in Newark, N. J., cafe; dies next day.
- Nov.** 3 King George II recalled to Greek throne in plebiscite.
- 11 Army pilots climb 14 miles in stratosphere flight.
- 22 First airmail flight across Pacific to Manila.
- 27 Japanese strike at Peiping.
- Dec.** 9 Supreme Court denies Hauptmann appeal; to die Jan. 13.
- 14 Thomas G. Masaryk resigns as President of Czechoslovakia.
- 22 Anthony Eden becomes England's Foreign Secretary; urges sanctions against Italy.
- DIED:** Sen. Bronson Cutting, May 6; Aircraftman T. E. Shaw ("Lawrence of Arabia"), May 19; Jane Addams, May 21; Col. Alfred Dreyfus, 75, July 12; Billy Sunday, 72, Nov. 6.

- 1936** The fuse was lit in Ethiopia and North China. As war rumbled along those far-off horizons, the U. S. sidled behind a "Neutrality Act" and fought shy of foreign entanglements. This time, we said, we will have no truck with foreign wars. As for domestic conflict, John L. Lewis had just punched Bill Hutcheson in the nose and the boys were choosing up sides for Labor's great civil war between the A. F. of L. and C. I. O. It was, in fact, an exciting time for Labor, what with the generous new Wagner Act and the introduction of the sit-down strike. The New Deal was in the saddle, FDR had signed the Social Security Act and another national election was coming up.
- Jan.** 3 President Roosevelt reaffirms backing of drastic neutrality law.
6 A. A. A. crop control program declared unconstitutional by the Supreme Court.
15 Japanese withdraw from naval conference at London.
20 King George V, of England, dies at 70; Prince of Wales, 41, succeeds to the throne as Edward VIII.
27 Bonus bill becomes law after seventeen years of wrangling.
- Feb.** 13 Leon Blum clubbed by group of royalists; Action Française, royalist party, is outlawed as a result.
17 Tennessee Valley Authority's power program upheld by Supreme Court.

22 Senate defeats Court plan, burying it in committee by 70 to 20.

24 Alabama frees 5 of 9 Scottsboro defendants.

30 Tientsin set afire by Jap planes.

Aug. 1 Japs thrust south toward Nanking to widen "incident war"; Central China in panic.

12 Senator Hugo Black named to Supreme Court.

15 863 die as Chinese planes bomb Shanghai.

17 Black confirmed; Senate rejects rumors of Senator's Klan affiliations.

23 Japs land at Shanghai; 250 killed as shell explodes in international quarter.

Nov. 29 Britain and France agree to give Hitler colonies in exchange for peace.

Dec. 10 Japanese attack, sack Nanking.

11 Italy quits League over Ethiopia.

13 U. S. gunboat *Panay* sunk by Jap planes.

16 Tokyo apologizes for *Panay*, ousts air chief.

19 Russia executes 8 more officials for treason.

Erich von Ludendorff, last German war lord dies.

21 Roosevelt bars "isolation"; doesn't want 'peace at any price.'

25 U. S. accepts Tokyo apology on *Panay*.

DIED: Martin Johnson, Jan. 13; Jean Harlow, June 7; Sen. Jos. T. Robinson, July 14; Andrew Mellon, Aug. 26; Newton D. Baker, Dec. 25.

1938 The Stock Market sagged and slumped, industry was again in the doldrums. Roosevelt blamed a business recession. "Pump Priming" was the word in Washington, where they talked of fresh billions to get things moving again.

The President was working on a plan for an enlarged Navy. The program sounded logical, for in Europe the machinery of war gathered momentum ominously, while the democratic nations fumed and hesitated. Hitler's troops were poised for Austria; the stage was set for Munich.

Jan. 19 Franco air raids kill 700 in Barcelona and Valencia.

28 Roosevelt asks billion dollars for "two-ocean Navy."

Feb. 5 Hitler seizes army control; Ribbentrop becomes Foreign Minister.

16 Austria, yielding to Hitler's threat, puts Nazis in cabinet.

21 Hitler defies foes, says Nazis seek colonies, Pan-German unity. Anthony Eden resigns as British Foreign Minister, charging Chamberlain seeks to "buy peace."

22 Commons approves Chamberlain policy.

Mar. 4 Rev. Martin Niemoller imprisoned by Nazis.

8 Richard Whitney & Co. bankrupt, suspends; Whitney indicted for grand larceny.

12 Hitler strikes in Austria; Nazis seize government as army moves in.

18 Mexico expropriates foreign oil interests.

29 U. S. protests Mexican oil seizures.

April 4 Loyalist Spain severed as Rebels cut sea road.

11 Austrians vote 99.75 percent for Anschluss.

16 Britain and Italy sign pact to maintain peace.

May 2 Hitler in Rome, pledges amity with Duce.

9 League yields, allowing France and Britain to recognize Italy's conquest in Ethiopia.

June 15 Wage-Hour Bill enacted.

17 France votes universal conscription in wartime.

20 France closes frontier, halting aid to Loyalists.

23 Germany puts entire nation under forced labor.

July 4 50,000 jailed in Austria during 3½ months of Nazi terror.

9 14 Jews, 44 Arabs, dead in Palestine riots.

12 Howard Hughes flies around the world in 3 days, 19 hours, 14 minutes (record).

18 Douglas Corrigan lands in Ireland in "wrong-way" flight.

Aug. 1 Japanese and Russians in border skirmish.

3 Mexico rejects U. S. protest, cites U. S. New Deal to justify oil seizures.

11 Russian-Japanese truce.

Sept. 1 Hitler demands autonomy for Sudeten Germans.

5 Prague yields to Nazi pressure on nearly all German demands.

10 Hitler and Goering promise protection to Sudeten Germans.

16 Britain and France, after parley, urge Czechs to surrender Sudetenland.

26 Roosevelt appeals to Hitler and Czechs for peaceful settlement of problems.

30 Britain, France, Italy, Germany in parley at Munich agree to dismemberment of Czechoslovakia. Chamberlain returns to cheering London crowds with "peace in our time."

Oct. 1 Nazi troops cross Czech border; Czechs yield to Polish demand for Teschen.

3 Hitler makes triumphant entry in Sudetenland, and—

5 forces Britain and France to yield more Czech territory.

30 "Attack from Mars" in radio sketch by Orson Welles causes widespread panic.

Nov. 2 Hungary gets slice of Czechoslovakia, too.

10 Assassination of German envoy in Paris by Herschel Grynszpan looses Nazi wrath at Jews over all Reich; Jews herded into camps, fined \$400,000,000.

Mexico agrees to pay for oil and land seizures.

13 Mother Cabrini first American to be beatified in Vatican.

18 Hitler recalls German Ambassador from U. S. in protest against Roosevelt statement.

23 Jews in Germany fined 20 percent of all property.

Dec. 7 French, German peace pact signed.

DIED: Benj. N. Cardozo, July 9; Samuel Insull, 78, July 16; Cardinal Hayes, 70, Sept. 4.

1939 After Munich (Sept. 30, 1938) a murky twilight settled over the world; a time of uneasiness and fear. Britain armed feverishly, the U. S. stepped up plane production. The cause of the Spanish Loyalists disintegrated. Bundists, American Firsters and Communists grew hoarse denouncing warmongers. Congress stood firm for neutrality.

New York was excited about a World's Fair—the World of Tomorrow. While the assorted glamour and gadgets of this bright glimpse of the future were assembling on Flushing Meadow, a very different world was being shaped by forces unleashed in Europe. It was not the World of Tomorrow we expected. In its vast changes, economic and political upheavals, its waste and tumult and pain, it was to surpass the most extravagant forecasts.

Jan. 4 President Roosevelt calls for extensive defense program.

5 Felix Frankfurter named to Supreme Court.

7 Tom Mooney pardoned.

20 Hitler removes Hjalmar H. G. Schacht; appoints Walther Funk to head Reichsbank.

25 80,000 dead in Chilean earthquake; cities wrecked, destruction in 6 provinces.

26 Barcelona yields; Loyalists flee to North, Franco in pursuit.

30 Hitler pledges aid to Italy in war, calls for colonies, foreign trade, and denounces "defamation in U. S."

Feb. 10 Pope Pius XI dies at 81 after seventeen years' reign.

13 Justice Louis D. Brandeis retires at 82.

18 Golden Gate International Exposition opens in San Francisco.

20 Dorothy Thompson ejected by Bundists in tumultuous rally at New York's Madison Square Garden.

27 Franco officially recognized by France and England.

Sit-down strikes outlawed by Supreme Court.

Mar. 2 Eugenio Cardinal Pacelli elected Pope in third ballot; becomes Pius XII.

14 Hitler orders Slovakia to decide on complete break from Prague rule; Britain and France decline to interfere.

15 Hitler takes Czechs "under protection." Republic breaks up; Hungary and Rumania march in also.

16 Hungary annexes Carpatho-Ukraine.

22 Hitler and troops enter Memel, which is annexed to Reich.

- DIED:** Jacob Ruppert, 71, Jan. 13; Pius XI, 81, Feb. 10; Ralph Pulitzer, June 14; Claude Swanson, July 7; Lawrence Gilman, 61, Sept. 9; Cardinal Mundelein, Oct. 2; Pierce Butler, 73, Nov. 16.

1940 After the blitz in Poland—stalemate, boredom. It seemed a phony war. The French army moped behind the Maginot Line; German work gangs poured concrete along the Westwall. In London the war correspondents in their new uniforms talked it over like critics at a play; found it dull.

In the U. S. they were playing the "Star-Spangled Banner" in the theaters ("Life With Father" had just opened) and people grew misty-eyed when Kate Smith sang "God Bless America!" Wendell L. Willkie was about to write a short piece on national affairs called "We, the People." A new force was rising to challenge U. S. complacency, disturb the apathy of the American people.

Jan. 3 F.D.R. asks wartime powers, urges higher taxes for defense.

12 Navy's 5-year program calls for 150 ships costing \$2,500,000,000.

15 F. B. I. seizes eighteen persons in fantastic plot to seize the government.

- DIED:** Senator William E. Borah, 74, Jan. 19; E. S. Harkness, 66, Jan. 29; Lord Tweedsmuir (John Buchan), Feb. 11; Raymond Ingersoll, 64, Feb. 24; Samuel Untermyer, 81, Mar. 16; Mrs. W. K. Vanderbilt, 76, April 20; Walter P. Chrysler, 65, Aug. 18; Leon Trotsky, August 21; Sen. Ernest Lundeen, Aug. 31; Giulio Gatti-Casazza, 71, Sept. 2; Speaker William B. Bankhead, 66, Sept. 15; Dr. Glenn Frank, 52, Sept. 15; Tom Mix, 60, Oct. 12; Neville Chamberlain, 71, Nov. 10; Sen. Key Pitman, 68, Nov. 10; Lord Lothian, 58, Dec. 12.

1941 This was the winter of the long blitz. The Luftwaffe rained bombs methodically on England. The Nazi war machine had rolled through the Balkans and was pushing across the rim of North Africa toward Suez, threatening the British life line. Lend-lease was about to begin, over the bitter protests of isolationists. Already plants were expanding. The cry was for machine tools, aluminum, mechanics. While Selective Service took the youngsters, the able-bodied, the unmarried, industry's demands started a feverish migration from farms and towns to San Diego, Hartford, Paterson, Seattle, Kansas City, Detroit, Bridgeport. The "Arsenal of Democracy" was beginning its gigantic task. The training of the first raw conscripts had started. In newly staked-out Army camps thousands of wooden barracks and mess halls rose to the clatter of hammer and saw.

- Jan.** 1 ASCAP strike bars most U. S. music from air.
 Britain mobilizes to combat fire bombs.
 5 British take 25,000 Italian prisoners in North Africa.

- DIED: Amy Mollison, 32, Jan. 6; Kenneth F. Simpson, Jan. 24; Gen. John Metaxas, 69, Jan. 29; Sir Frederick K. G. Banting, Feb. 23; Former King Alfonso, Feb. 28; Lawrence Hills, Mar. 28; Virginia Woolf, April 2; August Hecksher, 92, April 26; Lou Gehrig, 37, June 2; Arthur Curtiss James, 74, June 4; Ex-Kaiser, Wilhelm, June 4; Senator Pat Harrison, 59, June 22; Ignace Jan Paderewski, 80, June 29; Mrs. James Roosevelt, 86, Sept. 6; Louis D. Brandeis, 84, Oct. 5; Simon Guggenheim, 73, Nov. 2.

1942 Those little Japanese, they must be crazy! So we mumbled and fumed that Sunday afternoon. They were crazy, but they had sunk half our fleet (except the carriers), crippled a great naval base, reduced our Pacific sea power dangerously. They had driven us to panic, then into rage and confusion. We shook that off. We were in it now, up to our ears. The confusion cleared. The carping clamor of the isolationists died out—to be followed almost immediately by a shrill Communist clamor for a second front.

Russia was in desperate straits that winter. The war tempo came to America. Blackouts, air-raid wardens, civilian defense, censorship, draft boards, ration books, Knudsen-Hillman. No more automobiles. Already our planes were streaming onto English airfields; shiploads of trucks and tanks were unloading on the Persian Gulf for transit to Russia. We were in Iceland, Bermuda, on the shoulder of South America. We were in it—for keeps.

- Jan. 2 MacArthur gives up Manila; fights on for Bataan, Corregidor.
- 13 Donald Nelson made war production chief.
- 16 Carole Lombard killed in plane crash during cross-country tour for Victory Loan drive.
- 28 U. S. troops land in North Ireland.

- 19 British invade Burma.
- 25 Darlan, French turncoat and civilian administrator in Africa, assassinated.
- 27 Soviet drive toward Rostov cuts off 22 Nazi divisions behind Stalingrad; Russians off on road to Berlin.

DIED: Carole Lombard, Jan. 16; Brig. Gen. Cornelius Vanderbilt, 68, March 1; John Barrymore, 60, May 29.

1943 The war maps showed a U. S. Army pushing the Nazis back in Tunisia; Rommel's Afrika Korps streaming through Tripoli in retreat. American men, tanks and planes were in action at last.

MacArthur had stopped the Japs on New Guinea, was building a base in Australia. Our Navy had rallied in the Pacific and was getting ready to take the offensive. At home the shrill outcry for a second front mingled with the drive to sell war bonds, scrap metal drives. Beneath these surface excitations was the steady roar of machinery, the surge and thunder of blast furnaces and rolling mills. The blueprint stage was past. We were making the stuff.

Eighteen miles northwest of Knoxville that winter, woodsmen were clearing a Tennessee hillside. A building operation was about to begin, Manhattan Project, at Oak Ridge, something connected with science, and the war.

Jan. 11 F. D. R. calls for \$100 billions for war.

24 Eisenhower named to command invasion.

26 Nazi pocket battleship *Scharnhorst* sunk by British off northern Norway.

U. S. seizes railroads to bar strike. Marines land on Cape Gloucester, New Britain.

DIED: George Washington Carver, Jan. 5; Carlo Tresca, Jan. 11; Alexander Woollcott, Jan. 28; J. P. Morgan, 75, March 13; Leslie Howard, June 2; Mrs. William Brown Meloney, June 23.

1944 Through the big staging depots behind the seaport cities endless streams of men moved toward the docks. Trainloads, busloads; sunburned, hardened soldiers loaded with gear, men of college age, weaned from family and home; tough, casual young Americans on their way to war.

Railway stations and bus terminals eddied with hurrying, uniformed figures. Broadway and Main Street were overrun. War had reached concert pitch. England bulged with uniformed men, fighter and bomber pilots, tanks, trucks, matériel. Ships in great sprawling convoys were moving across the Atlantic; tankers, troopships, supply ships, ammunition ships, LST's, LCI's, assembling around the rim of the British Isles for D-Day.

In the Pacific, Task Force 58 with its new fast Essex class carriers was ranging from the Solomons to the Gilberts and Marshalls. The Navy was about to begin its swift relentless conquest of the Pacific stepping stones to Japan.

- Jan. 4 Russian army over Polish line.
- 11 F.D.R. calls for a national service law to prevent strikes.
- 18 Army returns railroads to their owners as strike threat is removed.

- Oct. 4 American forces break through the German Westwall.
- 20 U. S. troops invade the Philippines.
- Aachen falls to the Americans after nineteen days.
- Nov. 7 President Roosevelt reelected for a fourth term.
- 16 Allies launch general offensive on 300-mile front.
- 25 Cordell Hull resigns as Secretary of State.
- 27 Edward Stettinius Jr., named Secretary of State.
- Dec. 16 Americans land on Mindoro, 150 miles from Manila.
- 16 German counteroffensive is launched in Belgium.
- 24 Americans halt the Nazis on the ninth day with help of 7,000-plane raid.
- 25 Nazis move forward again.
- 27 The Germans are stopped again.

DIED: Count Galeazzo Ciano, Jan. 11; William T. Dewart, 68, Jan. 27; William Allen White, 75, Jan. 29; Sen. Charles L. McNary, Feb. 25; Irvin S. Cobb, 67, March 10; William Cardinal O'Connell, 84, April 22; Frank Knox, 70, April 28; Norman H. Davis, July 2; Lt. Gen. Leslie J. McNair, July 27; Manuel Quezon, Aug. 1; Al Smith, Oct. 5; Wendell L. Willkie, 52, Oct. 7; Archbishop of Canterbury, 63, Oct. 26; Charles Dana Gibson, 77, Dec. 23.

1945 It was mostly downhill now. The great American war potential had delivered the goods. America's industrial strength, translated into tanks, trucks, planes, jeeps, was closing in on Germany. The Battle of the Bulge was the Nazis' last desperate stroke and it didn't quite come off. Along the Pacific seaboard, Navy convoys were loading for Iwo and Okinawa. From newly captured Saipan and Tinian B-29's were pounding Japan's industrial centers to rubble. The war had come to its last decisive phase. Here at home the nation churned with ultimate activity. Everyone had a job, everyone had money. Hotels, night clubs, theaters, roadhouses, juke joints reflected the tension and hysteria. Victory was in the air.

- Jan.** 9 General Douglas MacArthur lands invasion force in Lingayen Gulf, Luzon, wins 15-mile beachhead.
12 German line crumbles, Allies regain 100 square miles in "Bulge."
17 Russians take Warsaw by encirclement.

- HEBREW CONGREGATIONS, UNION OF AMERICAN. (1873) 32 W. 6th St., Cincinnati 2, Ohio; adm. sec., Rabbi Louis I. Egelson.

- HIBERNIANS IN AMERICA, ANCIENT ORDER OF.** (1836) 1648 Westmont Ave., Pittsburgh, Pa.; sec., Leo Kelly.
- HISTORICAL ASSOCIATION, AMERICAN.** (1884) Study Rm. 274, Library of Congress Annex, Washington 25, D. C.; 3,585; exec. sec., Guy Stanton Ford.
- HOME MISSIONS COUNCIL OF NORTH AMERICA.** (1908) 297 Fourth Ave., New York 10, N. Y.; exec. secretaries, Miss Edith E. Lowry & Mark A. Dawber.
- HORTICULTURAL SOCIETY, THE AMERICAN.** (1922) 821 Washington Loan & Trust Bldg., Washington 4, D. C.; 1,200; sec., Dr. V. T. Stoutmeyer.
- HOSPITAL ASSOCIATION, AMERICAN.** (1899) 18 E. Division St., Chicago 10, Ill.; 5,470; exec. sec., George Bugbee.
- HUGENOT SOCIETY OF AMERICA.** (1883) 122 East 58th St., New York, N. Y.; 425; sec., Margaret A. Jackson.
- INFANTILE PARALYSIS, NATIONAL FOUNDATION FOR.** (1938) 120 Broadway, New York, N. Y.; exec. sec., Peter J. A. Cusack.
- IRON AND STEEL INSTITUTE, AMERICAN.** (1908) 350 Fifth Ave., New York 1, N. Y.; sec., George S. Rose.
- IZAAK WALTON LEAGUE OF AMERICA, INC.** (1922) Merchandise Mart, Chicago; pres., Tappan Gregory.
- JEWISH FEDERATION AND WELFARE FUNDS, COUNCIL OF.** (1932) 165 West 46th St., New York 19, N. Y.; 255 Federations, Welfare Funds and Community Councils; exec. dir., H. L. Lurie.
- JEWISH WAR VETERANS OF THE U. S.** (1896) 276 Fifth Ave., New York 1, N. Y.; 150,000; nat. sec., Beatrice Wigeton.
- JEWISH WELFARE BOARD, NATIONAL.** (1917) 145 East 32nd St., New York 16, N. Y.; sec., Joseph Rosenzweig; 390,000.
- JEWISH WOMEN, NATIONAL COUNCIL OF.** (1893) 65,000; 1819 Broadway, New York 23, N. Y.; exec. dir., Flora R. Ruthenberg.
- KINDERGARTEN ASSOCIATION, NATIONAL.** (1909) 8 W. 40th St., New York 18, N. Y.; exec. sec., Bessie Lock.
- KIWANIS INTERNATIONAL.** (1915) 154,000 business & prof. leaders; 2,340 clubs in U. S. & Canada; 530 North Michigan Ave., Chicago 11, Ill.; sec., O. E. Peterson.
- KNIGHTS OF COLUMBUS.** (1882) 45 Wall St., New Haven, Connecticut; 459,034; sup. sec., Joseph F. Lamb, P. O. Drawer 1670, New Haven 7, Conn.
- KNIGHTS OF PYTHIAS.** (1864) 1054 Midland Bank Bldg., Minneapolis 1, Minn.; 350,000; sup. keeper of records and seal, Carl B. Bach.
- KNIGHTS TEMPLAR, GRAND ENCAMPMENT.** (1814) 428 Chamber of Commerce, Indianapolis 4; gr. rec., Adrain Homersby.
- LEGAL AID SOCIETIES, NATIONAL ASS'N. OF.** (1911) pres., Louis Fabricant, 11 Park Place, New York 7, N. Y.
- LIBRARY ASSOCIATION, AMERICAN.** (1876) 520 N. Michigan Ave., Chicago 11, Ill.; 15,000; exec. sec., Carl H. Milam.
- LIONS CLUB, INTERNATIONAL ASS'N.** (1917) 332 S. Michigan Ave., Chicago, Ill.; 165,000; sec. gen., Melvin Jones.
- LUTHER LEAGUE OF AMERICA.** 1228 Spruce St., Philadelphia 7, Pa.; exec. sec. Rev. Joseph W. Frease.
- MANUFACTURERS, NATIONAL ASSOCIATION OF.** (1895) 14 West 49th St., New York 20, N. Y.; 12,000; sec., Noel Sargent.
- MASONS, F. & A., GRAND LODGE OF THE STATE OF N. Y.** (1781) Masonic Hall, 71 West 23rd St., New York 10, N. Y.; 242,720; gr. sec., Charles M. Johnson. There are 15,264 lodges with a membership of 2,565,391 in the 48 states, District of Columbia and Puerto Rico.
- MATHEMATICAL SOCIETY, AMERICAN.** (1868) 531 West 116th St., New York 27, N. Y.; 2,700; sec., Prof. J. R. Kline.
- MAYFLOWER DESCENDANTS, GENERAL SOCIETY OF.** (1897) Winslow House, Plymouth, Mass.; 6,602.
- MEDICAL ASSOCIATION, AMERICAN.** (1847) 535 N. Dearborn St., Chicago 10, Ill.; 124,755; sec. & gen. mgr., Dr. Olin West.
- MEDICAL WOMEN'S ASSOCIATION, AMERICAN.** (1915) 50 W. 50th St., New York 20, N. Y.; 2,000; sec., Dr. Carrol LeFleur Dirch, 1214 North Dearborn St., Chicago, Ill.
- MERCHANT MARINE INSTITUTE, AMERICAN.** (1938) 11 Broadway, New York, N. Y.; 60; sec., R. J. Baker.
- METEOROLOGICAL SOCIETY, AMERICAN.** (1919) Blue Hill Observatory, Milton 26, Mass.; 1,600; sec., Charles F. Brooks.
- METHODIST EPISCOPAL CHURCH, EPWORTH LEAGUE OF THE.** (1890) 740 Rush St., Chicago, Ill.
- MILITARY AND NAVAL OFFICERS WORLD WARS, NEW YORK SOCIETY OF.** (1920) 625 Madison Ave., New York, N. Y.; 800; sec., Lt. Col. H. W. Muller.
- MILITARY ORDER OF THE LOYAL LEGION OF THE U. S.** (1865) 1805 Pine St., Philadelphia 3, Pa.; 1,869; rec.-in-chief, Kane S. Green.
- MISSIONARY ASSOCIATION, AMERICAN.** (1846) 287 Fourth Ave., New York 10, N. Y.; gen. sec., Fred L. Brownlee.
- MOOSE, LOYAL ORDER OF.** (1888) Mooseheart, Illinois; 593,391; sup. sec., Malcolm R. Giles.
- MUSIC CLUBS, NATIONAL FEDERATION OF.** (1898) 4,700 clubs; 320 Wait Ave., Ithaca, New York; pres., Mrs. Vincent H. Ober; sec., Mrs. W. A. Goforth.
- NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE.** (1909) 20 West 40th St., New York 18, N. Y.; exec. sec., Walter White.

- NATIONAL GRANGE, THE.** (1867) 744 Jackson Place, N. W., Washington, D. C.; 800,000; master, A. S. Goss.
- NATURALISTS, AMERICAN SOCIETY OF.** (1883) 55; pres., Prof. Fay-Cooper Cole, Dept. of Anthropology, Univ. of Chicago.
- NAVY LEAGUE OF THE U. S.** (1902) Mills Bldg., Washington 6, D. C.; 10,000; sec., Evelyn M. Collins.
- NEWSPAPER PUBLISHERS' ASSOCIATION, AMERICAN.** (1887) 370 Lexington Ave., New York 17, New York; 671 daily newspapers; gen. mgr., Cranston Williams.
- NEW YORK ACADEMY OF MEDICINE.** (1842) 2 East 103rd St., New York, N. Y.; dir., Herbert B. Wilcox.
- NURSES ASSOCIATION, AMERICAN.** (1896) 50 W. 50th St., New York, N. Y.; 178,550; exec. sec., Miss Alma H. Scott.
- ODD FELLOWS, INDEPENDENT ORDER OF.** (1819) 1,406,838; 16 W. Chase St., Baltimore, Md.; Grand Sire, D. D. Monroe.
- PORT.** (American Federation) (1921) 212 Fifth Ave., New York, N. Y.; pres., George Backer.
- OWLS, ORDER OF.** (1904) Owl Bldg., 311 Wethersfield Ave., Hartford, Conn.; 245,000; sup. sec., T. B. Kleiman.
- PAN AMERICAN UNION.** (1890) 17th St., and Constitution Ave., Washington 6, D. C.; 21 American Republics; dir. gen., L. S. Rowe.
- PARENTS AND TEACHERS, NATIONAL CONGRESS OF.** (1897) 600 S. Michigan Blvd., Chicago 5, Ill.; 3,054,950; sec., Mrs. H. S. Klein.
- PETROLEUM INSTITUTE, AMERICAN.** (1919) 50 West 40th St., New York 20, N. Y.; 4,000; sec., Lacy Walker.
- PHARMACEUTICAL ASSOCIATION, AMERICAN.** (1852) 2215 Constitution Ave., Washington, D. C.
- PHILATELIC SOCIETY, AMERICAN** (1886) P. O. Box 800, State College, Pa.; 7,000; exec. sec., H. Clay Musser.
- PHYSICAL SOCIETY, AMERICAN.** (1899) Columbia University, New York 27, N. Y.; 5,000; sec., Dr. Karl K. Darrow.
- PHYSICIANS, AMERICAN COLLEGE OF.** (1915) 4200 Pine St., Philadelphia 4, Pa.; 5,198; exec. sec., E. R. Loveland.
- PIGRIMS OF THE UNITED STATES.** (1904) 17 E. 42nd St., New York, N. Y.
- PLANNED PARENTHOOD FED. OF AMERICA.** (1921) sec., Mrs. Walter N. Rothschild; 10,000; 501 Madison Ave., New York, N. Y.
- POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF.** (1889) 3457 Walnut St., Philadelphia 4, Pa.; 9,500; sec., Dr. J. P. Lichtenberger.
- PREVENTION OF CRUELTY TO ANIMALS, AMERICAN SOCIETY FOR THE.** (1866) 50 Madison Ave., New York 10, N. Y.; 6,500; exec. vice pres., Sydney H. Coleman.
- PREVENTION OF WAR, NATIONAL COUNCIL FOR.** (1921) 1613 18th St., N. W., Washington 6, D. C.; exec. sec., Frederick J. Libby.
- PSYCHIATRIC ASSOCIATION, AMERICAN.** (1844) 9 Rockefeller Plaza, New York 20, N. Y.; 3,659; exec. ass't., Austin M. Davies.
- PUBLIC HEALTH ASSOCIATION, AMERICAN.** (1872) 1790 Broadway, New York 19, N. Y.; 9,800; exec. sec., Dr. Reginald M. Atwater.
- PUBLIC HEALTH NURSING, NATIONAL ORGANIZATION FOR.** (1912) 1790 Broadway, New York 19, N. Y.; gen. dir., Ruth Houlton.
- PUBLIC HOUSING CONFERENCE, NATIONAL.** (1931) 1,000; 122 E. 22nd St., N. Y. C.; exec. dir., Helen Alfred.
- RAILROADS, ASSOCIATION OF AMERICAN.** (1934) Transportation Bldg., Washington 6, D. C.; 137 railroad systems; sec., J. H. Forester.
- RED CROSS, AMERICAN NATIONAL.** (1881) 17th St., Washington 13, D. C.; 17,281,502 junior; 29,000,000 senior.
- RED MEN, IMPROVED ORDER OF.** (1834) 1521 W. Girard St., Philadelphia 30, Pa.; 149,459; Gr. Chief of Records, Herbert F. Stetser.
- REFORMED CHURCH OF THE U. S., BOARD OF FOREIGN MISSIONS OF THE.** (1838) 1505 Race St., Philadelphia 2, Pa.; sec., Rev. A. V. Casselman, D.D.
- ROOSEVELT MEMORIAL ASSOCIATION.** (1919) Theodore Roosevelt House, 28 E. 20th St., New York 3, N. Y.; sec. Hermann Hagedorn.
- ROSE SOCIETY, AMERICAN.** (1898) Box 687, Harrisburg, Pa.; 5,300; sec., R. C. Allen.
- ROTARY INTERNATIONAL.** (1905) 35 East Wacker Drive, Chicago 1, Ill.; 5,201 clubs; 225,750 members; sec., Philip Lovejoy.
- ROYAL ARCANUM, SUPREME COUNCIL OF THE.** (1877) 407 Shawmut Ave., Boston 18, Mass.; 55,000; sec., Herbert F. Hotchkiss, Station A, Boston 18, Mass.
- SAFETY COUNCIL, INC., NATIONAL.** (1913) 5216; 20 N. Wacker Drive, Chicago 6, Ill.; managing dir., W. H. Cameron.
- SALVATION ARMY.** (1865) 120 W. 14th St., New York City; nat'l. sec., Com. Edward J. Parker.
- SCHOOLS & COLLEGES ASSOCIATION, AMERICAN.** (1914) 30 Rockefeller Plaza, New York City; 500.
- SCIENCE, AMERICAN ASS'N. FOR THE ADVANCEMENT OF.** (1848) Smithsonian Institution Bldg., Washington 25, D. C.; 25,485; permanent sec., Dr. F. R. Moulton.
- SCIENCES, NATIONAL ACADEMY OF.** (1863) 2101 Constitution Ave., N. W., Washington 25, D. C.; 352 members, 41 foreign associates; home sec., Dr. Fred E. Wright.

- SEAMEN'S SERVICE, UNITED.** (1942) 39 Broadway, New York 6, N. Y.; exec. dir., Douglas P. Falconer.
- SEEING EYE, INC., THE.** (1929) 15,367; school at Morristown, N. J.; pres., Henry A. Colgate, treas., Herman J. Cook.
- SOCIAL HYGIENE ASSOCIATION, AMERICAN.** (1914) 1790 Broadway, New York 19, N. Y.; 18,000; sec., Dailey B. Durritt.
- SONS OF THE AMERICAN REVOLUTION, NATIONAL SOCIETY OF.** (1889) 1227 16th St., N. W., Washington 6, D. C.; 16,000; sec. gen., Frank D. Steele.
- SONS OF CONFEDERATE VETERANS.** (1896) Rm. 301-6 Law Bldg., Richmond, Va.; 15,000.
- SONS OF THE REVOLUTION, GENERAL SOCIETY.** (1876) In 30 states & Dist. of Col.; 10,000; gen. sec., Loyt Garrod Post, 4 Linwood Place, White Plains, N. Y.
- SPANISH WAR VETERANS, UNITED.** (1898) 40 G St., N. E., Washington 13, D. C.; 90,000; com. gen., P. J. Gallan.
- STANDARDS ASSOCIATION, AMERICAN.** (1918) 29 West 39th St., New York 18, N. Y.; sec., P. G. Agnew.
- STATISTICAL ASSOCIATION, AMERICAN.** (1839) 1603 K St., N. W., Washington 6, D. C.; 3,034; sec., Lester S. Kellogg.
- STEBEN SOCIETY OF AMERICA.** (1919) 369 Lexington Ave., New York City.
- STUDENT ASSEMBLY, UNITED STATES.** pres., Mary Lou Rogers, Swarthmore College, Swarthmore, Pa.
- STUDENT FEDERATION OF AMERICA, NATIONAL.** (1925) 1410 H St., N. W., Washington, D. C.; pres., John Darnell.
- SURGEONS, AMERICAN COLLEGE OF.** (1913) Sec., Warfield M. Firor, MD.; Johns Hopkins Hospital, Baltimore, Md.
- TRAVELERS AID SOCIETY.** (1907) 144 E. 44th St., New York 17, N. Y.; 4,528; gen. dir., Katherine E. Young.
- TUBERCULOSIS ASSOCIATION, NATIONAL.** (1904) 1790 Broadway, New York 19, N. Y.; mgr. dir., Dr. Kendall Emerson.
- UNITED NATIONS ASSOCIATION.** (Formerly League of Nations Ass'n., 1923); 7,300; 8 W. 40th St., New York 18, N. Y.; dir., Clark M. Eichelberger.
- UNITED SERVICE ORGANIZATIONS (USO).** 350 Fifth Ave., New York 1, N. Y.; sec., Randall J. LaBoeuf, Jr.
- UNIVERSITY PROFESSORS, AMERICAN ASS'N. OF.** (1915) 1155 16th St., N. W., Washington 6, D. C.; 15,872; gen. sec., Ralph E. Himstead.
- UNIVERSITY WOMEN, AMERICAN ASS'N. OF.** (1881) 1634 I St., N. W., Washington 6, D. C.; 70,943; gen. dir., Dr. Kathryn McHale.
- VETERANS ASSOCIATION, AMERICAN.** (1932) 271 Madison Ave., New York 16, N. Y.; 13,000; sec., John P. Dunlap, Jr.
- VETERANS OF FOREIGN WARS OF THE U. S.** (1899) Broadway & 34th St., Kansas City 2, Mo.; 250,000; adjt. gen., R. B. Handy, Jr.
- WAR OF 1812, GENERAL SOCIETY OF THE.** (1814) 441 Lexington Ave., New York, N. Y.; 600; pres. gen., J. Hall Long; sec. gen., John Harmon Noble.
- WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL.** (1874) 1730 Chicago Ave., Evanston, Ill.; 500,000; corr. sec., Miss Lilly Grace Matheson.
- WOMEN OF THE U. S., INC., NATIONAL COUNCIL FOR.** (1888) 17 affiliated organizations; 5,000,000 members; 501 Madison Ave., New York; exec. sec., Mrs. Charlotte Payne.
- WOMEN VOTERS, NATIONAL LEAGUE OF.** (1920) 726 Jackson Pl., N. W., Washington 6, D. C.; 60,000; sec., Mrs. Daniel Earley.
- WOMEN'S CLUBS, GENERAL FEDERATION OF.** (1890) 1734 N St., N. W., Washington 6, D. C.; 16,500 clubs; 2,500,000 women; exec. sec., Mrs. Thalia S. Woods; pres., Mrs. La Fell Dickinson.
- WOMEN'S CLUBS, NATIONAL FEDERATION OF BUSINESS & PROFESSIONAL.** (1919) 1819 Broadway, New York 23, N. Y.; 79,000; exec. sec., Louise Franklin Bache.
- WOMEN'S INTERNATIONAL LEAGUE FOR PEACE & FREEDOM.** (1915) 1734 F St., N. W., Washington 6, D. C.; 8,000; exec. sec., Dorothy Detyer.
- WOMEN'S VOLUNTARY SERVICES, AMERICAN.** (1940) 345 Madison Ave., New York City; 325,000; founder & pres., Mrs. Alice T. McLean.
- WOODMEN CIRCLE, SUPREME FOREST.** (1895) 3303 Farnam St., Omaha 2, Nebr.; 133,417; nat'l. sec., Clara B. Cassidy.
- WOODROW WILSON FOUNDATION.** (1922) 45 E. 65th St., New York 21, N. Y.; exec. dir., Mrs. Burnett Mahon.
- WORLD CALENDAR ASSOCIATION.** (1930) Int'l. Bldg., 630 Fifth Ave., New York 20, N. Y.; 12,800; sec., Miss Harriet A. Lillee.
- YOUNG MEN'S CHRISTIAN ASSOCIATION, NATIONAL COUNCIL OF.** 347 Madison Ave., New York 17, N. Y.; 1,466,824; gen. sec., Eugene E. Barnett.
- YOUNG MEN'S HEBREW ASSOCIATION.** (1874) 220 Fifth Ave., New York, N. Y.; 6,000; sec., Fabian M. Crystal.
- YOUNG WOMEN'S CHRISTIAN ASSOCIATIONS OF THE U. S. OF AMERICA, NAT'L ORGANIZATION OF.** (1906) 600 Lexington Ave., New York 22, New York; 622,000; sec. of nat'l. bd., Mrs. William Crawford White.
- YOUNG WOMEN'S HEBREW ASSOCIATION.** (1903) 220 Fifth Ave., New York, N. Y.; sec., Mrs. Benjamin Marshall.
- YOUTH CONGRESS, AMERICAN.** (1934) 4,500,000; 230 Fifth Ave., New York; exec. sec., Joseph Gooden.
- ZIONIST ORGANIZATION OF AMERICA.** (1897) 1720 16th St., N. W., Washington 9, D. C.; 150,000; Dr. Sidney Marks.
- ZOOLOGISTS, AMERICAN SOCIETY OF.** (1890) 1,059; sec., L. V. Domm, Univ. of Chicago, Chicago 37, Ill.

NOBEL PRIZES

The Nobel prizes are awarded under the will of Alfred Bernhard Nobel, Swedish chemist and engineer, who died in 1896. The interest of the fund is divided annually among the persons who have made the most outstanding contributions in the field of physics, chemistry, and physiology or medicine, who have produced the most distinguished literary work of an idealist tendency, and who have contributed most toward world peace.

The prizes for physics and chemistry are awarded by the Swedish Academy of Science in Stockholm, the one for physiology or medicine by the Caroline Medical Institute in Stockholm, that for literature by the academy in Stockholm, and that for peace by a committee of five elected by the Norwegian Storting.

The distribution of prizes was begun on December 10, 1901, the anniversary of Nobel's death. The amount of each prize varies with the income from the fund and since 1936 has stood at approximately £8,000.

Year	Literature	Peace
1901	René F. A. Sully Prudhomme (France)	Henri Dunant (Switzerland) and Frederick Passy (France)
1902	Theodor Mommsen (Germany)	Elie Ducommun and Albert Gobat (Switzerland)
1903	Björnsterne Björnson (Norway)	Sir William R. Cremer (England)
1904	Frédéric Mistral (France) and José Echegaray (Spain)	Institut de Droit International (Belgium)
1905	Henryk Sienkiewicz (Poland)	Bertha von Suttner (Austria)
1906	Giosuè Carducci (Italy)	Theodore Roosevelt (U. S.)
1907	Rudyard Kipling (England)	Ernesto T. Moneta (Italy) and Louis Renault (France)
1908	Rudolf Eucken (Germany)	Klas P. Arnoldson (Sweden) and Frederik Bajer (Denmark)
1909	Selma Lagerlöf (Sweden)	Auguste M. F. Beernaert (Belgium) and Baron Paul H. B. B. d'Estournelles de Constant de Rebecque (France)
1910	Paul von Heyse (Germany)	The Bureau International Permanent de la Paix (Switzerland)
1911	Maurice Maeterlinck (Belgium)	Tobias M. C. Asser (Holland) and Alfred H. Fried (Austria)
1912	Gerhart Hauptmann (Germany)	Elihu Root (U. S.)
1913	Rabindranath Tagore (India)	Henri La Fontaine (Belgium)
1914	No award	No award
1915	Romain Rolland (France)	No award
1916	Verner von Heidenstam (Sweden)	No award
1917	Karl Gjellerup (Denmark) and Henrik Pontoppidan (Denmark)	International Red Cross
1918	No award	No award
1919	Carl Spitteler (Switzerland)	Woodrow Wilson (U. S.)
1920	Knut Hamsun (Norway)	Léon Bourgeois (France)
1921	Anatole France (France)	Karl H. Branting (Sweden) and Christian L. Lange (Norway)
1922	Jacinto Benavente (Spain)	Fridtjof Nansen (Sweden)
1923	William B. Yeats (Ireland)	No award
1924	Wladyslaw Reymont (Poland)	No award
1925	George Bernard Shaw (England)	Sir Austen Chamberlain (England) and Charles G. Dawes (U. S.)
1926	Grazia Deledda (Italy)	Aristide Briand (France) and Gustav Stresemann (Germany)
1927	Henri Bergson (France)	Ferdinand Buisson (France) and Ludwig Quidde (Germany)
1928	Sigrid Undset (Sweden)	No award
1929	Thomas Mann (Germany)	Frank B. Kellogg (U. S.)
1930	Sinclair Lewis (U. S.)	Lars O. J. Söderblom (Sweden)
1931	Erik A. Karlfeldt (Sweden)	Jane Addams (U. S.) and Nicholas M. Butler (U. S.)
1932	John Galsworthy (England)	No award
1933	Ivan G. Bunin (Russia)	Sir Norman Angell (England)
1934	Luigi Pirandello (Italy)	Arthur Henderson (England)
1935	Eugene O'Neill (U. S.)	Carl von Ossietzky (Germany)
1936	Eugene O'Neill (U. S.)	Carlos de S. Lamas (Argentina)
1937	Roger Martin du Gard (France)	Lord Cecil of Chelwood (England)

Nobel Prizes—(cont.)

Year	Literature	Peace
1938	Pearl S. Buck (U. S.)	Office International Nansen pour les Réfugiés (Switzerland)
1939	Frans Emil Sillanpää (Finland)	No award
1940-1943	No awards	
1944	Johannes V. Jensen (Denmark)	International Red Cross
1945	Gabriela Mistral (Chile)	Cordell Hull (U. S.)
1946	Hermann Hesse (Switzerland)	Emily Greene Balch (U. S.) and John R. Mott (U. S.)

Year	Physics	Chemistry	Medicine
1901	Wilhelm C. Roentgen, for discovery of Roentgen rays.	Jacobus H. van 't Hoff, for discovery of laws of chemical dynamics and osmotic pressure in solutions.	Emil A. von Behring, for work on serum therapy against diphtheria.
1902	Hendrik A. Lorentz and Pieter Zeeman, for work on influence of magnetism upon radiation.	Emil Fischer, for experiments in sugar and purin groups of substances.	Sir Ronald Ross, for work on malaria.
1903	Henri A. Becquerel, for work on discovery of spontaneous radioactivity. Pierre and Marie Curie, for investigation of phenomena of radiation discovered by H. Becquerel.	Svante A. Arrhenius, for his electrolytic theory of dissociation.	Niels R. Finsen, for his treatment of lupus vulgaris, with concentrated light rays.
1904	John Strutt, Lord Rayleigh, for discovery of argon in investigating gas density.	Sir William Ramsay, for discovery and determination of the place of inert gaseous elements in the air.	Ivan P. Pavlov, for work on the physiology of digestion.
1905	Philipp Lenard, for work with cathode rays.	Adolph von Baeyer, for work on organic dyes and hydroaromatic combinations.	Robert Koch, for work on tuberculosis.
1906	Joseph J. Thomson, for investigations on passage of electricity through gases.	Henri Moissan, for isolation of fluorine, and introduction of electric furnace named after him.	Camillo Golgi and Santiago Ramon y Cajal, for work on the structure of the nervous system.
1907	Albert A. Michelson, for spectroscopic and metrologic investigations carried out with his precision optical instruments.	Eduard Buchner, for discovery of cell-less fermentation and investigations in biological chemistry.	Charles L. A. Laveran, for work with protozoa in the generation of disease.
1908	Gabriel Lippmann, for method of reproducing colors by photography.	Ernest Rutherford, for investigations into disintegration of elements and chemistry of radioactive substances.	Paul Ehrlich and Elie Metchnikoff, for work on immunity.
1909	Guglielmo Marconi and Ferdinand Braun, for development of wireless.	Wilhelm Ostwald, for work on catalysis and investigations into principles governing chemical equilibrium and reaction rates.	Theodor Kocher, for work on the thyroid gland.
1910	Johannes D. van der Waals, for work with the equation of state for gases and liquids.	Otto Wallach, for work in the field of alicyclic compounds.	Albrecht Kossel, for achievements in the chemistry of the cell.

Year	Physics	Chemistry	Medicine
1911	Wilhelm Wien, for his laws governing the radiation of heat.	Marie S. Curie, for discovery of elements radium and polonium.	Allvar Gullstrand, for work on the dioptrics of the eye.
1912	Gustaf Dalén, for discovery of automatic regulators used in lighting lighthouses and light buoys.	Victor Grignard, for reagent discovered by and named after him; and Paul Sabatier, for the methods of hydrogenating organic compounds.	Alexis Carrel, for work on vascular ligature and grafting of blood vessels and organs.
1913	Onnes H. Kamerlingh, for work leading to production of liquid helium.	Alfred Werner, for linking up atoms within the molecule.	Charles Richet, for work on anaphylaxy.
1914	Max von Laue, for discovery of defraction of Roentgen rays passing through crystals.	Theodore W. Richards, for determining atomic weight of many chemical elements.	Robert Bárány, for work on physiology and pathology of the vestibular system.
1915	W. H. Bragg and W. L. Bragg, for analysis of crystal structure by means of X rays.	Richard Willstätter, for research into coloring matter of plants, especially chlorophyll.	No award.
1916	No award.	No award.	No award.
1917	Charles G. Barkla, discovery of Roentgen radiation of the elements.	No award.	No award.
1918	Max Planck, for discoveries in connection with quantum theory.	Fritz Haber, for synthetic production of ammonia.	No award.
1919	Johannes Stark, discovery of Doppler effect in Canal rays and decomposition of spectrum lines by electric fields.	No award.	Jules Bordet, for discoveries in connection with immunity.
1920	Charles E. Guillaume, for discoveries of anomalies in nickel steel alloys.	Walther Nernst, for work in thermochemistry.	August Krogh, discovery of regulation of motor mechanism of capillaries.
1921	Albert Einstein, for discovery of the law of the photoelectric effect.	Frederick Soddy, for investigations into origin and nature of isotopes.	No award.
1922	Niels Bohr, for investigations of structure of atoms and radiations emanating from them.	Francis W. Aston, for discovery of isotopes in nonradioactive elements and for discovery of the whole number rule.	In 1923 the prize for 1922 was divided between Archibald V. Hill for discovery relating to heat-production in muscles and Otto Meyerhof, for correlation between consumption of oxygen and production of lactic acid in the muscles.
1923	Robert A. Millikan, for works on elementary charge of electricity and photoelectric phenomena.	Fritz Pregl, for method of microanalysis of organic substances discovered by him.	Frederick G. Banting and John J. R. MacLeod, for discovery of insulin.
1924	Karl M. G. Siegbahn, for investigations in X-ray spectroscopy.	No award.	Willem Einthoven, for discovering the mechanism of the electrocardiogram.
1925	James Franck and Gustav Hertz, for discovery of laws governing impact of electrons upon atoms.	In 1926 the 1925 prize was awarded to Richard Zsigmondy, for exposition of the heterogeneous nature of colloid solutions.	No award.

Nobel Prizes—(cont.)

Year	Physics	Chemistry	Medicine
1926	Jean Perrin, for works on discontinuous structure of matter and discovery of the equilibrium of sedimentation.	The Svedberg, for work on disperse systems.	Johannes Fibiger, for discovery of the Spiroptera carcinoma.
1927	Arthur H. Compton, for discovery of Compton phenomenon; and Charles T. R. Wilson, for the method of perceiving the paths taken by electrically charged particles.	In 1928 the 1927 prize was awarded to Heinrich Wieland, for investigations of bile acids and kindred substances.	Julius Wagner-Jauregg, for use of malaria inoculation in treatment of dementia paralytica.
1928	In 1929 the 1928 prize was awarded to Owen W. Richardson, for work on the phenomenon of thermionics and discovery of the Richardson Law.	Adolf Windaus, for investigations on constitution of the sterols and their connection with vitamins.	Charles Nicolle, for work on typhus exanthematicus.
1929	Prince Louis Victor de Broglie, for discovery of the wave character of electrons.	Arthur Harden and Hans K. A. S. von Euler-Chelpin, for research of fermentation of sugars.	Christiaan Eijkman, for discovery of the anti-neuritic vitamins; and Sir Frederick G. Hopkins, for discovery of growth-promoting vitamins.
1930	Sir Chandrasekhara V. Raman, for work on diffusion of light and discovery of the Raman effect.	Hans Fischer, for work on coloring matter of blood and leaves and for his synthesis of hemin.	Karl Landsteiner, for discovery of human blood groups.
1931	No award.	Carl Bosch and Friedrich Bergius, for invention and development of chemical high-pressure methods.	Otto H. Warburg, for discovery of the character and mode of action of the respiratory ferment.
1932	In 1933 the prize for 1932 was awarded to Werner Heisenberg, for creation of the quantum mechanics.	Irving Langmuir, for work in realm of surface chemistry.	Sir Charles S. Sherrington and Edgar D. Adrian, for discoveries of the function of the neuron.
1933	Erwin Schroedinger and P. A. M. Dirac, for discovery of new fertile forms of the atomic theory.	No award.	Thomas H. Morgan, for discoveries on hereditary function of the chromosomes.
1934	No award.	Harold C. Urey, for discovery of heavy hydrogen.	George H. Whipple, George R. Minot, and William P. Murphy, for discovery of liver therapy against anaemias.
1935	James Chadwick, for discovery of the neutron.	Frédéric and Irène Curie Joliot, for synthesis of new radioactive elements.	Hans Spemann, for discovery of the organizer-effect in embryonic development.
1936	Victor F. Hess, for discovery of cosmic radiation; and Carl D. Anderson, for discovery of the positron.	Peter J. W. Debye, for investigations on dipole moments and diffraction of X rays and electrons in gases.	Sir Henry H. Dale and Otto Loewi, for discoveries on chemical transmission of nerve impulses.
1937	Clinton J. Davisson and George P. Thomson, for discovery of diffraction of electrons by crystals.	Walter N. Haworth, for research on carbohydrates and Vitamin C.	Albert Szent-Györgyi von Nagyrápolt, for discoveries on biological combustion.

Year	Physics	Chemistry	Medicine
1938	Enrico Fermi, for identification of new radioactivity elements and discovery of nuclear reactions effected by slow neutrons.	Richard Kuhn, for carotinoid study and vitamin research.	Corneill Heymans, for importance of sinus and aorta mechanisms in the regulation of respiration.
1939	Ernest Orlando Lawrence, for the development of the cyclotron.	Adolf Friedrich Johann Butenandt, for work on sexual hormones (declined the prize) and Leopold Ruzicka, work with polymetylenes.	Gerhard Domagk, antibacterial effect of pron-tocilate.
1940-42	No awards.		
1943	Otto Stern, for detection of magnetic momentum of protons.	George Hevesy De Heves, for work on use of isotopes as chemical indicators.	Henrik Dam, Edward A. Doisy for the discovery of the chemical nature of Vitamin K.
1944	Isidor Isaac Rabi, for work on magnetic movements of atomic particles.	Otto Hahn, for work on atomic fission.	Joseph Erlanger and Herbert Spencer Gasser, for work on functions of the nerve threads.
1945	Wolfgang Pauli, for work on atomic fissions.	Artturi Ilmari Virtanen, for research in the field of conservation of fodder.	Sir Alexander Fleming, Ernst Boris Chain, and Sir Howard Florey, for discovery of penicillin.
1946	Percy Williams Bridgman, studies and inventions in high-pressure physics.	James B. Sumner, crystallizing of enzymes. John H. Northrop and Wendell M. Stanley, preparing enzymes and virus proteins in pure form.	Hermann J. Muller, hereditary effects of X-ray on genes.

The Hall of Fame

The Hall of Fame for Great Americans, an open air colonnade 630 feet long, situated on the campus of New York University, contains busts of 75 of the 77 persons honored for national achievements. The names are chosen every five years by a committee of 100 men and women selected from all states. The last election was in 1945.

Name	Elected	Name	Elected
John Adams	1900	Ulysses Simpson Grant	1900
John Quincy Adams	1905	Asa Gray	1900
Louis Agassiz	1915	Alexander Hamilton	1915

Pulitzer Prizes in Journalism

Meritorious Public Service

- 1917 No award
 1918 *The New York Times*
 1919 *Milwaukee (Wis.) Journal*
 1920 No award
 1921 *Boston Post*
 1922 *The World* (New York, N. Y.)
 1923 *Memphis (Tenn.) Commercial Appeal*
 1924 *The World* (New York, N. Y.)
 1925 No award
 1926 *The Enquirer Sun* (Columbus, Ga.)
 1927 *Canton (O.) Daily News*
 1928 *Indianapolis (Ind.) Times*
 1929 *The Evening World* (New York, N. Y.)
 1930 No award
 1931 *Atlanta (Ga.) Constitution*
 1932 *Indianapolis (Ind.) News*
 1933 *New York World-Telegram*
 1934 *Medford (Ore.) Mail Tribune*
 1935 *The Sacramento (Calif.) Bee*
 1936 *The Cedar Rapids (Iowa) Gazette*
 1937 *St. Louis (Mo.) Post-Dispatch*
 1938 *The Bismarck (N. D.) Tribune*
 Special Bronze Plaque to:
Edmonton (Alberta) Journal
 1939 *The Miami (Fla.) Daily News*
 1940 *Waterbury (Conn.) Republican and American*
 1941 *St. Louis (Mo.) Post-Dispatch*
 1942 *Los Angeles (Calif.) Times*
 1943 *The World-Herald* (Omaha, Neb.)
 1944 *The New York Times*
 1945 *The Detroit (Mich.) Free Press*
 1946 *The Scranton (Pa.) Times*

Editorial

- 1917 *New York Tribune*
 1918 *The Courier-Journal* (Louisville, Ky.)
 1919 No award
 1920 *Evening World-Herald* (Omaha, Neb.)
 1921 No award
 1922 *The New York Herald*
 1923 *The Emporia (Kans.) Gazette*
 1924 *The Boston Herald*
 1925 *Charleston (S. C.) News and Courier*
 1926 *The New York Times*
 1927 *The Boston Herald*

- 1928 *Montgomery (Ala.) Advertiser*
 1929 *Norfolk (Va.) Virginian-Pilot*
 1930 No award
 1931 *Fremont (Neb.) Tribune*
 1932 No award
 1933 *The Kansas City (Mo.) Star*
 1934 *Atlantic (Ia.) News Telegraph*
 1935 No award
 1936 *The Washington Post*
 (FELIX MORLEY)
 Scripps-Howard newspapers
 (GEORGE B. PARKER)
 1937 *The Sun* (Baltimore, Md.)
 (JOHN W. OWENS)
 1938 *The Register and Tribune*
 (Des Moines, Ia.)
 (W. W. WAYMACK)
 1939 *The Oregonian* (Portland, Ore.)
 (RONALD G. CALLVERT)
 1940 *St. Louis (Mo.) Post-Dispatch*
 (BART HOWARD)
 1941 *Daily News* (New York, N. Y.)
 (REUBEN MAURY)
 1942 *New York Herald Tribune*
 (GEOFFREY PARSONS)
 1943 *The Register and Tribune*
 (Des Moines, Iowa)
 (FORREST W. SEYMOUR)
 1944 *The Kansas City (Mo.) Star*
 1945 *The Providence (R. I.) Journal-Bulletin*
 (GEORGE W. POTTER)
 1946 *The Delta Democrat-Times* (Greenville, Miss.)
 (HODDING CARTER)

Correspondence

- 1929 PAUL SCOTT MOWRER
 1930 LELAND STOWE
 1931 H. R. KNICKERBOCKER
 1932 WALTER DURANTY
 CHARLES G. ROSS
 1933 EDGAR ANSEL MOWRER
 1934 FREDERICK T. BIRCHALL
 1935 ARTHUR KROCK
 1936 WILFRED C. BARBER
 1937 ANNE O'HARE MCCORMICK

- 38 ARTHUR KROCK
- 39 LOUIS P. LOCHNER
- 40 OTTO D. TOLISCHUS
- 41 Group award*
- 42 CARLOS P. ROMULO
- 43 HANSON W. BALDWIN
- 44 ERNEST TAYLOR PYLE
- 45 HAROLD V. (HAL) BOYLE
- 46 ARNALDO CORTESI

*In place of an individual Pulitzer Prize for foreign correspondence, the Trustees approved the commendation of the Advisory Board that a bronze plaque or scroll be designed and executed to recognize and symbolize the public services and the individual achievements of American news reporters in the war zones of Europe, Asia, and Africa from the beginning of the present war.

- 1943 GEORGE WELLER
- 1944 PAUL SCHOENSTEIN and associates
- 1945 JACK S. McDOWELL
- 1946 WILLIAM L. LAURENCE

Special Citation

- 1941 *The New York Times* for the public educational value of its foreign news report, exemplified by its scope, by excellence of writing and presentation, and supplementary background information, illustration, and interpretation.
- 1944 BYRON PRICE, Director of the Office of Censorship, for the creation and administration of the newspaper and radio codes.
- 1945 The cartographers of the American press whose maps of the war fronts have helped notably to clarify and increase public information on the progress of the Armies and Navies.

Pulitzer Prizes in Letters

- 1921 *The Age of Innocence*. By EDITH WHARTON
- 1922 *Alice Adams*. By BOOTH TARKINGTON
- 1923 *One of Ours*. By WILLA CATHER

Pulitzer Prizes in Letters—(cont.)

- 1924 *The Able McLaughlins*. By MARGARET WILSON
- 1925 *So Big*. By EDNA FERBER
- 1926 *Arrowsmith*. By SINCLAIR LEWIS
- 1927 *Early Autumn*. By LOUIS BROMFIELD
- 1928 *The Bridge of San Luis Rey*. By THORNTON WILDER
- 1929 *Scarlet Sister Mary*. By JULIA PETERKIN
- 1930 *Laughing Boy*. By OLIVER LA FARGE
- 1931 *Years of Grace*. By MARGARET AYER BARNES
- 1932 *The Good Earth*. By PEARL S. BUCK
- 1933 *The Store*. By T. S. STRIBLING
- 1934 *Lamb in His Bosom*. By CAROLINE MILLER
- 1935 *Now in November*. By JOSEPHINE WINSLOW JOHNSON
- 1936 *Honey in the Horn*. By HAROLD L. DAVIS
- 1937 *Gone With the Wind*. By MARGARET MITCHELL
- 1938 *The Late George Apley*. By JOHN PHILLIPS MARQUAND
- 1939 *The Yearling*. By MARJORIE KINNAN RAWLINGS
- 1940 *The Grapes of Wrath*. By JOHN STEINBECK
- 1942 *In This Our Life*. By ELLEN GLASGOW
- 1943 *Dragon's Teeth*. By UPTON SINCLAIR
- 1944 *Journey in the Dark*. By MARTIN FLAVIN
- 1945 *A Bell for Adano*. By JOHN HERSEY
- 1939 *Abe Lincoln in Illinois*. By ROBERT SHERWOOD
- 1940 *The Time of Your Life*. By WILLIAM SAROYAN
- 1941 *There Shall Be No Night*. By ROBERT SHERWOOD
- 1943 *The Skin of Our Teeth*. By THORNTON WILDER
- 1945 *Harvey*. By MARY CHASE
- 1946 *State of the Union*. By RUSSEL CROUSE and HOWARD LINDSAY

*No awards in 1917, 1919, 1942, 1944.

History

Drama*

- 1918 *Why Marry?* By JESSE LYNCH WILLIAMS
- 1920 *Beyond the Horizon*. By EUGENE O'NEILL
- 1921 *Miss Lulu Bett*. By ZONA GALE
- 1922 *Anna Christie*. By EUGENE O'NEILL
- 1923 *Icebound*. By OWEN DAVIS
- 1924 *Hell-Bent Fer Heaven*. By HATCHER HUGHES
- 1925 *They Knew What They Wanted*. By SIDNEY HOWARD
- 1926 *Craig's Wife*. By GEORGE KELLY
- 1927 *In Abraham's Bosom*. By PAUL GREEN
- 1928 *Strange Interlude*. By EUGENE O'NEILL
- 1929 *Street Scene*. By ELMER L. RICE
- 1930 *The Green Pastures*. By MARC CONNELLY
- 1931 *Alison's House*. By SUSAN GLASPELL
- 1932 *Of Thee I Sing*. By GEORGE S. KAUFMAN, MORRIE RYSKIND & IRA GERSHWIN
- 1933 *Both Your Houses*. By MAXWELL ANDERSON
- 1934 *Men in White*. By SIDNEY KINGSLEY
- 1935 *The Old Maid*. By ZOE AKINS
- 1936 *Idiot's Delight*. By ROBERT E. SHERWOOD
- 1937 *You Can't Take It With You*. By MOSS HART and GEORGE S. KAUFMAN
- 1938 *Our Town*. By THORNTON WILDER
- 1917 *With Americans of Past and Present Days*. By His Excellency J. J. JUSSELAND, Ambassador of France to the United States
- 1918 *A History of the Civil War, 1861-1865*. By JAMES FORD RHODES
- 1919 No award
- 1920 *The War with Mexico*. By JUSTIN H. SMITH
- 1921 *The Victory at Sea*. By WILLIAM SOWDEN SIMS in collaboration with BURTON J. HENDRICK
- 1922 *The Founding of New England*. By JAMES TRUSLOW ADAMS
- 1923 *The Supreme Court in United States History*. By CHARLES WARREN
- 1924 *The American Revolution—A Constitutional Interpretation*. By CHARLES HOWARD MCILWAIN
- 1925 *A History of the American Frontier*. By FREDERIC L. PAXSON
- 1926 *The History of the United States*. By EDWARD CHANNING
- 1927 *Pinckney's Treaty*. By SAMUEL FLAGG BEMIS
- 1928 *Main Currents in American Thought*, 2 vols. By VERNON LOUIS PARRINGTON
- 1929 *The Organization and Administration of the Union Army, 1861-1865*. By FRED ALBERT SHANNON
- 1930 *The War of Independence*. By CLAUDE H. VAN TYNE
- 1931 *The Coming of the War: 1919*. By BERNADOTTE E. SCHMITT
- 1932 *My Experiences in the World War*. By JOHN J. PERSHING
- 1933 *The Significance of Sections in American History*. By FREDERICK J. TURNER
- 1934 *The People's Choice*. By HERBERT AGAR
- 1935 *The Colonial Period of American History*. By CHARLES MCLEAN ANDREWS
- 1936 *The Constitutional History of the United States*. By ANDREW C. MC LAUGHLIN
- 1937 *The Flowering of New England*. By VAN WYCK BROOKS
- 1938 *The Road to Reunion, 1865-1900*. By PAUL HERMAN BUCK
- 1939 *A History of American Magazines*. By FRANK LUTHER MOTT
- 1940 *Abraham Lincoln: The War Years*. By CARL SANDBURG

- 1941 *The Atlantic Migration, 1607-1860.* By MARCUS LEE HANSEN
 1942 *Reveille in Washington.* By MARGARET LEECH
 1943 *Paul Revere and the World He Lived In.* By ESTHER FORBES
 1944 *The Growth of American Thought.* By MERLE CURTI
 1945 *Unfinished Business.* By STEPHEN BONSAI
 1946 *The Age of Jackson.* ARTHUR M. SCHLESINGER, JR.

Biography

- 1917 *Julia Ward Howe.* By LAURA E. RICHARDS and MAUDE HOWE ELLIOTT assisted by FLORENCE HOWE HALL
 1918 *Benjamin Franklin, Self-Revealed.* By WILLIAM CABELL BRUCE
 1919 *The Education of Henry Adams.* By HENRY ADAMS
 1920 *The Life of John Marshall.* By ALBERT J. BEVERIDGE
 1921 *The Americanization of Edward Bok.* By EDWARD BOK
 1922 *A Daughter of the Middle Border.* By HAMLIN GARLAND
 1923 *The Life and Letters of Walter H. Page.* By BURTON J. HENDRICK
 1924 *From Immigrant to Inventor.* By MICHAEL IDVORSKY PUPIN
 1925 *Barrett Wendell and His Letters.* By M. A. DEWOLFE HOWE
 1926 *The Life of Sir William Osler.* By HARVEY CUSHING
 1927 *Whitman.* By EMORY HOLLOWAY
 1928 *The American Orchestra and Theodore Thomas.* By CHARLES EDWARD RUSSELL
 1929 *The Training of an American. The Earlier Life and Letters of Walter H. Page.* By BURTON J. HENDRICK
 1930 *The Raven.* By MARQUIS JAMES
 1931 *Charles W. Eliot.* By HENRY JAMES
 1932 *Theodore Roosevelt.* By HENRY F. PRINGLE
 1933 *Grover Cleveland.* By ALLAN NEVINS
 1934 *John Hay.* By TYLER DENNETT
 1935 *R. E. Lee.* By DOUGLAS S. FREEMAN
 1936 *The Thought and Character of William James.* By RALPH BARTON PERRY
 1937 *Hamilton Fish.* By ALLAN NEVINS
 1938 *Pedlar's Progress.* By ODELL SHEPARD
 1939 *Andrew Jackson (2 vols).* By MARQUIS JAMES
 1939 *Benjamin Franklin.* By CARL VAN DOREN
 1940 *Woodrow Wilson. Life and Letters, Vol. VII and VIII.* By RAY STANNARD BAKER
 1941 *Jonathan Edwards.* By OLA ELIZABETH WINSLOW
 1942 *Crusader in Crinoline.* By FORREST WILSON
 1943 *Admiral of the Ocean Sea.* By SAMUEL ELIOT MORISON
 1944 *The American Leonardo: The Life of Samuel F. B. Morse.* By CARLETON MABEE

- 1945 *George Bancroft: Brahmin Rebel.* By RUSSEL BLAINE NYE
 1946 *Son of the Wilderness.* By LINNIE MARSH WOLFE

Poetry*

- *Previous to the establishment of this prize in 1922, the 1918 and 1919 awards had been made from gifts provided by the Poetry Society.
- 1918 *Love Songs.* By SARA TEASDALE
 1919 *Old Road to Paradise.* By MARGARET WIDDEMER
 1922 *Corn Huskers.* By CARL SANDBURG
 1922 *Collected Poems.* By EDWIN ARLINGTON ROBINSON
 1923 *The Ballad of the Harp-Weaver; A Few Figs from Thistles; Eight Sonnets in American Poetry, 1922, A Miscellany.* By EDNA ST. VINCENT MILLAY
 1924 *New Hampshire: A Poem with Notes and Grace Notes.* By ROBERT FROST
 1925 *The Man Who Died Twice.* By EDWIN ARLINGTON ROBINSON
 1926 *What's O'Clock.* By AMY LOWELL
 1927 *Fiddler's Farewell.* By LEONORA SPEYER
 1928 *Tristram.* By EDWIN ARLINGTON ROBINSON
 1929 *John Brown's Body.* By STEPHEN VINCENT BENET
 1930 *Selected Poems.* By CONRAD AIKEN
 1931 *Collected Poems.* By ROBERT FROST
 1932 *The Flowering Stone.* By GEORGE DILLON
 1933 *Conquistador.* By ARCHIBALD MACLEISH
 1934 *Collected Verse.* By ROBERT HILLYER
 1935 *Bright Ambush.* By AUDREY WURDEMANN
 1936 *Strange Holiness.* By ROBERT P. TRISTRAM COFFIN
 1937 *A Further Range.* By ROBERT FROST
 1938 *Cold Morning Sky.* By MARYA ZATURENSKA
 1939 *Selected Poems.* By JOHN GOULD FLETCHER
 1940 *Collected Poems.* By MARK VAN DOREN
 1941 *Sunderland Capture.* By LEONARD BACON
 1942 *The Dust Which Is God.* By WILLIAM ROSE BENET
 1943 *A Witness Tree.* By ROBERT FROST
 1944 *Western Star.* By STEPHEN VINCENT BENET
 1945 *V-Letter and Other Poems.* By KARL SHAPIRO
 1946 No award

Music

- 1943 WILLIAM SCHUMAN
 1944 HOWARD HANSON
 1945 AARON COPLAND
 1946 LEO SOWERBY

Special Award

- 1944 *Oklahoma!* By RICHARD RODGERS and OSCAR HAMMERSTEIN, 2ND

List of Academy Awards for Production, Acting, and Direction

Year	Production		Direction
1928	<i>Wings</i> , Paramount	Frank Borzage	<i>Seventh Heaven</i> } joint
1929	<i>Broadway Melody</i> , M-G-M	Lewis Milestone	<i>Two Arabian Nights</i> } awards
1930	<i>All Quiet on the Western Front</i> , Universal	Frank Lloyd	<i>The Divine Lady</i>
1931	<i>Cimarron</i> , RKO	Lewis Milestone	<i>All Quiet on the Western Front</i>
1932	<i>Grand Hotel</i> , M-G-M	Norman Taurog	<i>Skippy</i>
1933	<i>Cavalcade</i> , Fox	Frank Borzage	<i>Bad Girl</i>
1934	<i>It Happened One Night</i> , Columbia	Frank Lloyd	<i>Cavalcade</i>
1935	<i>Mutiny on the Bounty</i> , M-G-M	Frank Capra	<i>It Happened One Night</i>
1936	<i>The Great Ziegfeld</i> , M-G-M	John Ford	<i>The Informer</i>
1937	<i>The Life of Emile Zola</i> , Warner	Frank Capra	<i>Mr. Deeds Goes to Town</i>
1938	<i>You Can't Take It With You</i> , Columbia	Leo McCarey	<i>The Awful Truth</i>
1939	<i>Gone With the Wind</i> , Selznick	Frank Capra	<i>You Can't Take It With You</i>
1940	<i>Rebecca</i> , Selznick	Victor Fleming	<i>Gone With the Wind</i>
1941	<i>How Green Was My Valley</i> , 20th Century-Fox	John Ford	<i>The Grapes of Wrath</i>
1942	<i>Mrs. Miniver</i> , M-G-M	John Ford	<i>How Green Was My Valley</i>
1943	<i>Casablanca</i> , Warner	William Wyler	<i>Mrs. Miniver</i>
1944	<i>Going My Way</i> , Paramount	Michael Curtiz	<i>Casablanca</i>
1945	<i>The Lost Weekend</i> , Paramount	Leo McCarey	<i>Going My Way</i>
		Billy Wilder	<i>The Lost Weekend</i>

	Actress		Actor
1928	Janet Gaynor	<i>Seventh Heaven</i>	Emil Jannings
1929	Mary Pickford	<i>Coquette</i>	Way of All Flesh
1930	Norma Shearer	<i>Divorcee</i>	Warner Baxter
1931	Marie Dressler	<i>Min and Bill</i>	In Old Arizona
1932	Helen Hayes	<i>Sin of Madelon Claudet</i>	George Arliss
1933	Katharine Hepburn	<i>Morning Glory</i>	Lionel Barrymore
1934	Claudette Colbert	<i>It Happened One Night</i>	Fredric March
1935	Bette Davis	<i>Dangerous</i>	Dr. Jekyll and Mr. Hyde
1936	Luise Rainer	<i>The Great Ziegfeld</i>	Charles Laughton
1937	Luise Rainer	<i>The Good Earth</i>	Private Life of Henry VIII
1938	Bette Davis	<i>Jezebel</i>	Clark Gable
1939	Vivien Leigh	<i>Gone With the Wind</i>	<i>It Happened One Night</i>

FORMS OF ADDRESS

To make the forms of address applicable to women as well as men, it is to be assumed that feminine titles may be used wherever masculine titles are shown:

Mrs. or Miss
Madam: or Dear Madam:
My dear Madam Secretary:
My dear Madam Commissioner:
My dear Madam Mayor:

Mr.
Sir: or Dear Sir:
My dear Mr. Secretary:
My dear Mr. Commissioner:
My dear Mr. Mayor:

FEDERAL GOVERNMENT OFFICIALS

Title	If personal name is not used (formal)	If personal name is used (informal)
The President	The President The White House Washington 25, D. C. My dear Mr. President:	The Honorable . . . (full name) The White House Washington 25, D. C. My dear President . . . :
	Oral: Mr. President	
The Vice President	The President of the Senate United States Senate Washington 25, D. C. Sir:	The Honorable . . . (full name) The Vice President of the United States Washington 25, D. C. My dear Mr. Vice President: My dear Mr. . . . (full name)
Cabinet Member	(formal, diplomatic) The Honorable The Secretary of . . . Washington 25, D. C. Sir:	(informal) The Honorable . . . (full name) Secretary of . . . Washington 25, D. C. My dear Mr. Secretary: My dear Mr. . . . :
	The Honorable The Attorney General Washington 25, D. C. Sir:	The Honorable . . . (full name) The Postmaster General Washington 25, D. C. My dear Mr. Postmaster Gen- eral My dear Mr. . . . :
	(business form) The Secretary of . . . Washington 25, D. C. Dear Sir:	or to an Administrator: My dear Mr. Administrator:
	Oral: Mr. Secretary	
The Speaker of the House	The Speaker of the House of Representatives Washington 25, D. C. Sir:	The Honorable . . . (full name) Speaker of the House of Rep- resentatives Washington 25, D. C. My dear Mr. Speaker: My dear Mr. . . . (full name)
Senator	Hon. . . . (full name) United States Senate Washington 25, D. C.	Hon. . . . (full name) United States Senate Street number City and State
	(alike for men and women) (alike in both formal and informal)	
	My dear Senator:	
	My dear Senator . . . (full name):	
	My dear Mr. (Mrs. or Miss) . . . (full name):	
	Dear Sir or Dear Madam (rare)	

Oral: Senator

Title	If personal name is not used (formal)	If personal name is used (informal)
Representative	Hon. . . . (full name) House of Representatives Washington 25, D. C.	Hon. . . . (full name) Representative in Congress Street number City and State
	(alike for men and women) (alike in both formal and informal)	
	My dear Congressman: (Congresswoman*)	
	My dear Mr. or Mrs. or Miss . . . :	
	Dear Sir or Dear Madam (rare)	

*The term "Congressman" seems likely to become general for both men and women, similar to "chairman," "spokesman," "juryman," etc.

JUDICIAL OFFICERS

The Chief Justice of the United States	The Chief Justice of the United States Washington 13, D. C.	The Honorable . . . (full name) Chief Justice of the U. S. Washington 13, D. C.
	My dear Mr. Chief Justice:	Mr. Chief Justice . . . (last name) Supreme Court of the U. S. Washington 13, D. C.
Associate Justice of the Supreme Court of the United States	My dear Mr. Chief Justice:	My dear Mr. Chief Justice: The Honorable . . . (full name) Justice, Supreme Court of the United States Washington 13, D. C. Mr. Justice . . . (last name) Supreme Court of the U. S. Washington 13, D. C. My dear Mr. Justice:

DIPLOMATIC REPRESENTATIVES

Ambassador	His Excellency The Ambassador of . . . Washington, D. C.	His Excellency Mr. or personal title Ambassador of . . . Washington, D. C.
	Sir: or My dear Mr. Ambassador:	Excellency: . . . (full name) . . . The American Ambassador Foreign Capital, Country
Minister or Envoy	Sir:	My dear Mr. Ambassador: My dear Mr. . . . : (personal)
	His Excellency The Minister of . . . Washington, D. C.	His Excellency Mr. or personal title Minister of . . . Washington, D. C.
	The Honorable The American Minister Foreign Capital, Country	The Honorable . . . (full name) . . . The American Minister Foreign Capital, Country
	Sir: or My dear Mr. Minister:	My dear Mr. Minister: My dear Mr. . . . : (personal)

STATE AND CITY OFFICIALS

Governor	The Governor or The Honorable The Governor of . . . State Capital, State	Hon. . . . (full name) Governor of . . . State Capital, State
	Sir:	My dear Governor: My dear Governor . . . (name): Dear Sir:

STATE AND CITY OFFICIALS—(cont.)

MILITARY AND NAVAL OFFICERS AND ENLISTED MEN

Officers and enlisted men in the Army and Navy should be addressed by their titles rather than by "Mr." Titles of rank or rating are usually abbreviated in addresses. The business salutation for all ranks, rates and grades is: Dear Sir:

ARMY

My dear General . . . :
(similarly for Lt. Gen., Maj. Gen. and
Brig. Gen.)
My dear Colonel . . . :
(similarly for Lt. Colonel)
My dear Major . . . :

An Officer and His
Wife

Colonel and Mrs. . . (full
name)
Lieut. and Mrs. . . . (full
name)

Army or Navy Chap-
lain

The Chaplain of . . .
My dear Chaplain:

NAVY

My dear Admiral . . . :
(similarly for Vice Adm. and Rear Adm.)

My dear Captain . . . :

My dear Commander . . . :
(but not for Lt. Commander)

Captain and Mrs. . . . (full
name)
Lt. Comdr. and Mrs. . . . (full
name)
Lieut. (jg) and Mrs. . . . (full
name)

The Salutations are the same as those given under Salutations to Military and Naval Officers.

Chaplain . . . (full name)
My dear Chaplain:
My dear Chaplain . . . :
Dear Chaplain . . . :

SCIENTIFIC INVENTIONS AND DISCOVERIES

Source: Encyclopaedia Britannica.

DISCOVERIES AND INVENTIONS IN CHEMISTRY

- 1766—CAVENDISH. Discovery of "inflammable air" (hydrogen) as distinct substance and demonstration (1781) that it burned to form water.
- 1774—PRIESTLEY. Discovery of oxygen.
- 1783—LAVOISIER. First quantitative synthesis of water.
- 1803—DALTON. Atomic theory; laws of chemical combination.
- 1809—GAY-LUSSAC. Laws of gases.
- 1811—AVOGADRO. Molecular hypothesis.
- 1828—WÖHLER, LIEBIG. Synthesis of urea; foundation of organic chemistry.
- 1841—FARADAY. Induction of electric current.
- 1860—BUNSEN, KIRCHHOFF. Invention of the spectroscope.
- 1868—LOCKYER. Discovery of helium on the sun by use of spectroscope.
- 1869—MENDELEEV. Periodic table of elements, established families of elements.
- 1887—ARRHENIUS. Ionic theory of dissociation in solution.
- 1896—BECQUEREL. Radioactivity of uranium.
- 1899—CURIE. Discovery of radium.
- 1908—ONNES (Kamerlingh). Liquefaction of helium.
- 1912—LAUE, BRAGG. X-ray structures of crystals.
- 1913—MOSELEY. Atomic numbers.
- 1919—ASTON. Mass spectroscopy for separation of isotopes.
- 1932—UREY. Discovery of deuterium.
- 1934—JOLIO, CURIE. Artificial radioactivity.

INVENTIONS AND DISCOVERIES IN APPLIED CHEMISTRY

- 1650—GLAUBER. Manufacture of hydrochloric acid.
- 1839—GOODYEAR. Process for vulcanizing rubber.
- 1846—SCHÖNBEIN. Invention of gun cotton.
- 1856—BESSEMER. Air blast converter for manufacture of steel.
- 1858—HOFMANN. Discovered aniline in coal tar; aniline dyes.
- 1861—SOLVAY. Manufacture of soda from salt.
- 1862—NOBEL. Invention of dynamite.
- 1873—LINDE. Introduced ammonia refrigeration.
- 1886—HALL. Manufacture of aluminum by electrolytic action.
- 1891—FRASCH. Method for mining sulphur.
- 1908—BAKELAND. Phenol-formaldehyde resins (bakelite).
- 1913—HABER. Synthesis of ammonia from nitrogen and hydrogen.
- 1915—LANGMUIR. Tungsten filaments.
- 1923—MIDGLEY. Tetraethyl lead gasoline.
- 1930—CAROTHERS. Nylon plastic.
- 1930—IPATIEFF. High-octane gasoline.
- 1930—CAROTHERS and COLLINS. Neoprene, synthetic rubber.

DISCOVERIES AND INVENTIONS IN ELECTRICITY

- 1745—VON KLEIST. Leyden jar condenser.
- 1752—FRANKLIN. Lightning rod and the nature of lightning.
- 1791—GALVANI. Theory of animal electricity.
- 1800—VOLTA. Current electricity and electric battery.
- 1826—OHM. Laws of electrical resistance.
- 1828—HENRY. Electromagnetism and induction.
- 1831—FARADAY. Electromagnetic induction.
- 1832—MORSE. Electric telegraph perfected.
- 1832—GAUSS. System of absolute electric measurements.
- 1838—PAGE. Induction coil.
- 1870—GRAMME. First industrial dynamo.
- 1876—BELL. Telephone.
- 1878—CROOKES. Discovery of cathode ray.
- 1878—EDISON. First electric incandescent lamp.
- 1855—STANLEY. Electric transformer.
- 1892—TESLA. Alternating current motor.
- 1892—STEINMETZ. Laws of alternating current.
- 1895—ROENTGEN. Discovery of X-rays.
- 1896—MARCONI. Practical wireless.
- 1897—THOMSON. Isolation of the electron.
- 1904—FLEMING. First diode radio tube.
- 1907—DE FOREST. Triode radio tube.
- 1914—COOLIDGE. Tungsten filament lamp.
- 1925—BAIRD. Televisor, precursor of television.

MECHANICAL INVENTIONS AND DISCOVERIES

- 1769—WATT. Steam engine patented.
- 1783—MONTGOLFIER. Hot-air balloon.
- 1785—CARTWRIGHT. Power loom.
- 1786—REED. Machine-cut nails.
- 1787—FITCH. Steamboat.
- 1793—WHITNEY. Cotton gin; mass production of interchangeable gun parts, 1798.
- 1797—NEWBOLD. Cast-iron plow.
- 1807—FULTON. First successful steamboat.
- 1816—DAVY. Miner's safety lamp.
- 1829—STEPHENSON. First successful steam railroad.
- 1833—McCORMICK. Reaper.
- 1835—COLT. Revolver.
- 1837—ERICSSON. Screw propeller.
- 1846—HOE. Rotary printing press.
- 1846—HOWE. Sewing machine.
- 1852—OTIS. Improved power elevator.
- 1858—FIELD. Successful Atlantic cable.
- 1861—GATLING. Machine gun.
- 1868—SHOLES, GLIDDEN. Typewriter.
- 1869—WESTINGHOUSE. Air brake for railroads.
- 1877—EDISON. Phonograph.
- 1888—DUNLOP. Pneumatic tire.
- 1893—EDISON. Motion pictures.
- 1897—DIESEL. First successful heavy oil engine.
- 1903—WRIGHT BROTHERS. Airplane.
- 1905—SPERRY. Gyrocompass.
- 1909—BRÉGUET. Helicopter.

DISCOVERIES AND INVENTIONS IN PHYSICS

- 1687—NEWTON. Law of gravity.
- 1785—COULOMB. Fundamental laws of electrical attraction.
- 1798—THOMPSON (Baron Rumford). Mechanical theory of heat.
- 1815—FRESNEL. Diffraction of light.
- 1840—JOULE. Measurements of electric current.
- 1847—HELMHOLTZ. Law of conservation of energy.
- 1873—MAXWELL. Electromagnetic theory of light.
- 1896—BECQUEREL. Discovery of radioactivity.
- 1897—WILSON. Development of cloud chamber to detect subatomic particles.
- 1897—THOMSON. Discovery of electrons.
- 1901—PLANCK. Quantum theory.
- 1902—MICHELSON. Velocity of light.
- 1905—EINSTEIN. Special theory of relativity.
- 1911—RUTHERFORD. Theory of atomic nucleus.
- 1913—BOHR. Electron theory.
- 1924—DE BROGLIE. Wave nature of the electrons.
- 1931—LAWRENCE. Invention of the cyclotron.
- 1932—CHADWICK. Discovery of the neutron.
- 1932—ANDERSON. Discovery of the positron.
- 1934—FERMI. Use of slow neutrons in atom smashing.
- 1938—HAHN. Discovery of uranium fission.
- 1941—FERMI, *et al.* Atomic pile for generation of power.

DISCOVERIES IN PHYSIOLOGY AND MEDICINE

- 1628—HARVEY. Circulation of blood and function of the heart.
- 1665—HOOKE. First observation and naming of "cells."
- 1675—LEEUEWENHOEK. Observation of bacteria by microscope.
- 1688—REDI. All life comes from life.
- 1737—LINNAEUS. System for classifying plants and animals.
- 1768—SPALLANZANI. Disproved spontaneous generation.
- 1796—JENNER. Vaccination for smallpox.
- 1819—LAËNNEC. Invention of stethoscope.
- 1839—SCHWANN. All living matter composed of cells.
- 1842—LONG. First to use ether as anesthetic in surgery. (Jackson, Morton, and Long disputed first use of ether.)
- 1859—DARWIN. Evolution and theory of natural selection.
- 1865—MENDEL. Laws of heredity.
- 1867—LISTER. Antiseptic surgery.
- 1882—METCHNIKOV. Function of white blood corpuscles discovered.
- 1882—PASTEUR. Rabies preventive.
- 1882—KOCH. Tuberculosis bacteria discovered.
- 1892—WEISMANN. Developed theory of germ plasm in heredity.
- 1894—KITAZATO. Discovery of bacillus of plague.
- 1894—ROUX. Perfection of diphtheria antitoxin.
- 1897—ELJKMAN. Cause of beriberi, vitamin deficiency.
- 1900—REED, *et al.* Cause of yellow fever.

Discoveries in Physiology and Medicine—(cont.)

- 1900—DE VRIES. Nature of mutations and their role in heredity.
- 1901—TAKAMINE. Isolation of adrenaline, first hormone isolated.
- 1905—BINET. Intelligence tests.
- 1906—WASSERMANN, *et al.* Test for syphilis.
- 1907—SHULL. Development of hybrid corn.
- 1907—WILLSTÄTTER. Constitution of chlorophyll.
- 1908—FREUD. Doctrine of psychoanalysis.
- 1909—MORGAN. Theory of the gene and detailed mechanics of heredity.
- 1910—PAVLOV. Mechanism of the conditioned reflex.
- 1912—CUSHING. Relation of pituitary gland to growth.
- 1912—EHRlich. Salvarsan.
- 1913—GOLDBERGER. Cause and control of pellagra.
- 1913—SCHICK. Test of susceptibility to diphtheria.
- 1913—McCOLLUM. Isolation of vitamin A.
- 1922—BANTIN, MACLEOD. Insulin for treatment of diabetes.
- 1924—STEENBOCK. Production of vitamin D by ultraviolet irradiation.
- 1926—MINOT, WHIPPLE, and MURPHY. Liver treatment of anemia.
- 1932—DOMAGK. Sulfa drugs as bactericides.
- 1936—STANLEY. Molecular nature of viruses.
- 1946—DU VIGNEAUD. Synthetic penicillin.

Weights and Measures

Source: U. S. Bureau of Standards.

Fundamental Equivalents

In its original conception the meter was the fundamental unit of the metric system, and all units of length and capacity were to be derived directly from the meter which was intended to be equal to one ten-millionth of the earth's quadrant. Furthermore, it was originally planned that the unit of mass, the kilogram, should be identical with the mass of a cubic decimeter of water at its maximum density. At present, however, the units of length and mass are defined independently of these conceptions.

The International Prototype Meter is kept at the International Bureau of Weights and Measures. By definition the meter now bears no definite relation to the earth's quadrant, but is the length of a certain platinum-iridium bar when supported in a definitely specified manner, at the temperature of melting ice, and at standard atmospheric pressure (760 millimeters of mercury). The kilogram is independently defined as the mass of a definite platinum-iridium standard, the International Prototype Kilogram, which is also kept at the International Bureau of Weights and Measures. The liter is defined as the volume of a kilogram of water, at standard atmospheric pressure, and at the temperature of its maximum density, approximately 4° C. The meter is thus the fundamental unit on which are based all metric standards and measurements of length and area, and of volumes derived from linear measurements.

A supplementary definition of the meter in terms of the wave length of light was adopted provisionally by the Seventh General (International) Conference on Weights and Measures, in 1927. According to this definition, the relation* for red cadmium light waves under specified conditions of temperature, pressure, and humidity is

$$1 \text{ meter} = 1,553,164.13 \text{ wave lengths.}$$

This corresponds to a wave length (cadmium red) of

$$6438.469 \times 10^7 \text{ millimeters}$$

The kilogram is the fundamental unit on which are based all metric standards of mass. The liter is a secondary or derived unit of capacity or volume. The liter is larger by about 27 parts per million than the cube of the tenth of the meter, i.e., the cubic decimeter—that is, 1 liter=1.000027 cubic decimeters.

The conversion tables which involve the relative length of the yard and meter are based upon the relation:

$$1 \text{ meter} = 39.37 \text{ inches,}$$

contained in the act of Congress of 1866†. From this relation it follows that 1 inch=25.40005 millimeters (nearly).

In recent years engineering and industrial interests the world over have urged the adoption of the simpler relation, 1 inch=25.4 millimeters exactly, which differs from the preceding value by only 2 parts in a million. This simpler relation has not as yet been officially adopted by either Great Britain or the United States, but is in wide industrial use‡.

*J. R. Benoit, C. Fabry, and A. Perot, Nouvelle détermination du rapport des longueurs d'onde fondamentales avec l'unité métrique. Trav. et Mém. Bur. Int. Poids et Mesures 15, 131 (1913).

†United States Code, title 15, sec. 205.

‡Conversion tables (ASA B48.1—1933), computed on the basis of 1 inch=25.4 mm. exactly, may be obtained from the American Standards Association, New York, N. Y.

Units of Weights and Measures

The supplementary metric units are formed by combining the words "meter", "gram", and "liter" with the six numerical prefixes.

Prefixes and their meanings

m.	milli —one-thousandth	(0.001)
c.	centi —one-hundredth	(0.01)
d.	deci —one-tenth	(0.1)
	(the unit equals 1)	
dk.	deka —ten	(10)
h.	hecto —one hundred	(100)
k.	kilo —one thousand	(1,000)

Land area

ha.	hectare
a.	are
ca.	centare

Area

1 are	100 square meters
1 hectare	10,000 square meters

Metric units

m.	meter (for length)
gm.	gram (for weight or mass)
l.	liter (for capacity)

Area (square)

km. ²	kilometer
hm. ²	hectometer
dkm. ²	dekameter
m. ²	meter
dm. ²	decimeter
cm. ²	centimeter
mm. ²	millimeter
μ ²	micron

Volume (cubic)

km. ³	kilometer
hm. ³	hectometer
dkm. ³	dekameter
m. ³	meter
dm. ³	decimeter
cm. ³	centimeter
mm. ³	millimeter
μ ³	micron

Length

km.	kilometer
hm.	hectometer
dkm.	dekameter
m.	meter
dm.	decimeter
cm.	centimeter
mm.	millimeter
μ	micron (0.001mm.)
mμ	millimicron

Weight

kg.	kilogram
hg.	hectogram
dkg.	dekagram
gm.	gram
dg.	decigram
cg.	centigram
mg.	milligram

Capacity of containers

kl.	kiloliter	l.	liter
hl.	hectoliter	dl.	deciliter
dkl.	dekaliter	cl.	centiliter
		ml.	milliliter

Length

Fundamental Units

A meter (m.) is a unit equal to the distance between the defining lines on the International Prototype Meter when this standard is at the temperature of melting ice (0°C).

A yard (yd.) is a unit of length equal to $\frac{3600}{3937}$ of a meter.

Multiples and Submultiples

1 kilometer (km.)	=1000 meters
1 hectometer (hm.)	= 100 meters
1 dekameter (dkm.)	= 10 meters
1 decimeter (dm.)	=0.1 meter
1 centimeter (cm.)	=0.01 meter
1 millimeter (mm.)	=0.001 meter
1 micron (μ.)	=0.000001 meter=0.001 millimeter
1 millimicron (mμ.)	=0.000000001 meter=0.001 micron
1 angstrom (A.)	$\left\{ \begin{array}{l} =0.0000001 \text{ millimeter} \\ =0.0001 \text{ micron} \\ =.1 \text{ millimicron} \end{array} \right.$
1 statute mile	$\left\{ \begin{array}{l} =8 \text{ furlongs}=320 \text{ rods} \\ =1760 \text{ yards or } 5280 \text{ feet} \end{array} \right.$
1 furlong	= $\frac{1}{8}$ mile=40 rods=220 yards=660 feet
1 rod	=5 $\frac{1}{2}$ yards=16 $\frac{1}{2}$ feet=25 links
1 foot	= $\frac{1}{3}$ yard=12 inches
1 hand	=4 inches

1 sea mile	
1 geographical mile	
1 international nautical mile	=1852 meters=6076.10 feet
1 fathom	=6 feet=8 spans
1 span	= $\frac{1}{8}$ fathom=9 inches

Mass

Fundamental Units

A kilogram (kg.) is a unit of mass equal to the mass of the International Prototype kilogram.

A gram (g.) is a unit of mass equal to one-thousandth of the mass of the International Prototype Kilogram.

An avoirdupois pound (lb. avdp.) is a unit of mass equal to 0.4535924277 kilogram.

A troy pound (lb. t.) is a unit of mass equal to $\frac{5760}{7000}$ of that of the avoirdupois pound.

Multiples and Submultiples

- 1 metric ton (t.)=1000 kilograms
- 1 hectogram (hg.)= 100 grams
- 1 dekagram (dkg.)= 10 grams
- 1 decigram (dg.)= 0.1 gram
- 1 centigram (cg.)= 0.01 gram
- 1 milligram (mg.)= 0.001 gram
- 1 metric carat (c.)= 200 milligrams=0.2 gram

1 avoirdupois ounce (oz. avdp.)=1/16 avoirdupois pound=437.5 grains

1 avoirdupois dram (dr. avdp.)=1/256 avoirdupois pound=1/16 avoirdupois ounce
1 grain (grain)=1/7000 avoirdupois pound=1/5760 troy pound

1 apothecaries' pound (lb. ap.)=1 troy pound= $\frac{5760}{7000}$ avoirdupois pound

1 apothecaries' or troy ounce (oz. ap. or $\frac{3}{8}$ oz. t.)=1/12 troy pound= $\frac{480}{7000}$ avoirdupois pound
=480 grains

1 apothecaries' dram (dr. ap. or $\frac{3}{8}$)=1/96 apothecaries' pound= $\frac{1}{8}$ apothecaries' ounce=60 grains

1 pennyweight (dwt.)=1/20 troy ounce=24 grains

1 apothecaries' scruple (s. ap. or $\frac{1}{3}$)= $\frac{1}{3}$ apothecaries' dram=20 grains

1 short hundredweight (sh. cwt.)=100 avoirdupois pounds

1 long hundredweight (1 cwt.)=112 avoirdupois pounds

1 short ton (sh. tn.)=2000 avoirdupois pounds

1 long ton (1 tn.)=2240 avoirdupois pounds

Capacity

A liter is a unit of capacity equal to the volume occupied by the mass of 1 kilogram of pure water at its maximum density (at a temperature of 4° C., practically) and under the standard atmospheric pressure (of 760 mm.). It is equivalent in volume to 1.000027 cubic decimeters.

A gallon (gal.) is a unit of capacity equal to a volume of 231 cubic inches. It is used for the measurement of liquid commodities only.

A bushel (bu.) is a unit of capacity equal to the volume of 2150.42 cubic inches. It is used in the measurement of dry commodities only.

- 1 kiloliter 1000 liters (1 stere)
- 1 hectoliter 100 liters
- 1 dekaliter 10 liters
- 1 deciliter 0.1 liter
- 1 centiliter 0.01 liter

Capacity—Dry

2 pints	=1 quart
8 quarts	=1 peck
4 pecks	=1 bushel

Other Equivalents

1 mile	= { 8 furlongs	1 liquid quart = 57.75 cubic in.
	63,360 inches	1 liquid pint = 28.875 cubic in.
	1,760 yards	1 liquid gill = 7.21875 cubic in.
1 square yard	= 1,296 square in.	1 fluid ounce = 1.805 cubic in.
1 pint	= 16 fluid ounces	1 peck = 537.605 cubic in.
1 quart	= 57.8 cubic in.	1 dry quart = 67.2 cubic in.
1 U. S. gallon	= 231 cubic in.	1 dry pint = 33.6 cubic in.
1 Imperial gal.	= 277.418 cubic in.	1 board foot = 144 cu. in. (12×12×1)
1 bushel	= 32 quarts (dry)	1 cord = 128 cu. ft. (4×4×8)
1 ounce	= .91 ounce (troy)	1 barrel (dry, other than cranberry) = 105 dry qts. (7056 cu. in.)
1 ton	= .89 long ton	1 cranberry barrel = 5826 cubic inches
1 long ton	= 1.12 ton	

Other Units

CUBIT: now 18 inches long, supposed to have been the length from the elbow to the tip of the middle finger.

FATHOM: now a measure of length, 6 feet, used chiefly in measuring the depth of water.

HAND: a measure equal to a hand's breadth, 4 inches, used in measuring the height of horses.

KNOT: a unit of speed equivalent to one nautical mile, 6080.20 feet per hour.

LEAGUE: a varying measure of distance, but in English speaking countries usually three miles.

MAGNUM: a two-quart bottle, usually for champagne or certain other spirits.

MIL: a unit used in measuring the diameter of wire, being one one-thousandth of an inch.

STONE: an English weight of 14 lb.; influencing the United States in selling a barrel of flour weighing 196 lb. or 14 stone.

*VALENCE is a measure of the extent to which an atom is able to combine directly with others.

†ISOTOPES are one of two or more elements having same atomic number identical in chemical behavior. Because of their differences in mass, isotopes may be distinguished in the mass spectrophotograph and in band spectra. Now becoming increasingly important in chemical observations and discoveries of new elements and properties.

†Liquid. §Amorphous. ¶Graphite. **Crystalline. ††Compressed. ‡Cast. §§1939 atomic weight. ¶¶Exact date doubtful—born 1193 and died 1280. < Is less than. > Is greater than.

Figures in parentheses are tentative or theoretical.

Note that the number of isotopes of each element is increasing by discovery or by manufacture.

PHYSICAL CHEMISTRY: Josiah Willard Gibbs (1839-1903), Professor of Mathematical Physics at Yale, by his formulation of the "Phase Rule" and his "On the Equilibrium of Heterogeneous Substances" founded physical chemistry.

ORGANIC CHEMISTRY: Although others had experimented in organic chemistry, the origin of this branch may be ascribed to Friedrich Wöhler who synthesized urea, an organic compound, from ammonium cyanate, an inorganic in 1828.

Patents

The issuance of a patent is a contract between the United States government and the inventor which grants a monopoly on the manufacture, sale and proceeds of the invention exclusively to the inventor for a term not exceeding 17 years. To obtain the patent, the inventor must have produced some "new and useful art, machine, manufacture, or composition of matter, or some new and useful improvement thereof." In return for the monopoly or patent right, the inventor must present to the Patent Office full specifications and diagrams so that the invention or composition or process can be reproduced by other persons following the specifications. Should the inventor omit some point, however irrelevant, in his specifications or drawings in order to conceal his secret, the patent may be declared invalid.

An application for a patent must contain the following: a petition, addressed

to the commissioner of patents accompanied by a fee of \$30.00; a carefully prepared specification sheet describing the invention or composition; a drawing, if possible; a certified statement under oath that the applicant believes the invention to be new and that it was made or discovered by him. If the application is granted, the patent is awarded; an additional fee of \$30.00 is collected; and the specifications are published and furnished on request to the general public.

Applications are considered strictly in the order in which they are received. Patents are not granted for printed matter, for methods of doing business, or on devices for which claims contrary to natural laws are made. The applications for a perpetual motion machine are numerous but until a working model is presented that actually fulfills the conditions of the claim, no patent has been or will be issued.

Copyrights

A copyright, international or national, is the right obtained by authors, musicians, radio-script writers, and artists of all mediums to prevent the reproduction of their works without their consent. The United States Constitution (Article I, Section 8) empowers Congress to "promote the progress of science and the useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The possession of a copyright prevents reproduction by writing, printing, copying or imitation of the copyrighted article. This includes such works as motion picture or stage plots, characters or settings, any type of script in whole or in part of a radio production. The term "writing" has been defined to include maps, charts, music, prints, engravings, drawings, paintings, designs, photographs, photoplays, radio scripts, legitimate stage plays as well as books or any form of written or printed matter.

The first copyright statute went into effect in 1790; the present law has been on the books since 1909 and was amended in

1912. A copyright is good for 28 years on application with a corresponding renewal right for another 28 years if the renewal application is made within one year of the date of expiration. The copyright of a book or similar publication is obtained by marking each book with the word "copyright" together with the name of the owner of the copyright and the year of publication. This appears on the title page or the one immediately after it. After publication the copyright must be registered by forwarding to the Register of Copyrights, Washington, D. C., a petition for a copyright, a fee of Two Dollars (\$2.00), two copies of the best edition of the book (to be deposited in the Library of Congress), and an affidavit that the typesetting, printing, and binding have been done within the United States.

Citizens of all countries which grant reciprocal copyrights to Americans, which include most of the important literate nations, may, by international agreement, obtain copyright protection in the United States. Americans likewise receive copyrights effective in these countries.

Trade-marks

A trade-mark may be defined as a word, letter, device, symbol, or some combination of these, used in connection with merchandise, and pointing distinctly to the origin or ownership of the article to which it is applied.

Certificates of registration of trade-marks are issued under the seal of the Patent Office and may be registered by the owner if domiciled within the United States, including all territory under the jurisdiction and control of the United States. An American citizen who resides in any foreign country which by treaty or law reciprocates

similar privileges can register in the United States the trade-marks used in the products of the foreign factory.

General jurisdiction in trade-mark cases is given to the Federal Courts. Decisions of examiners on applications or oppositions are subject to appeal to the Commissioner of Patents, and from him to the Court of Appeals for the District of Columbia. In many cases, a trade-mark infringes unwittingly upon earlier trade-marks.

The maximum protection given by registration is 20 years, after which registration must again be made by application.

The Races of Mankind

by Professor Wilton Marion Krogman, Dept. of Anthropology, University of Chicago.

Classification of Man into groups called "races" rests upon the basic fact that all peoples belong to the same genus and species, *Homo sapiens*. This is important to keep in mind, for it implies that all peoples are much more alike than different.

Scientists classify Man by using a number of physical traits, most of them based upon observation rather than upon precise measurement. Examples of these are stature and head-form (determined by a breadth/length ratio), skin color, hair color, form and texture, eye color, nose shape, mouth form, shape of face with special reference to cheek-bones. Other criteria, such as arm and leg proportions, are more specialized. Two things are noteworthy here: (1) most of the physical traits are external; (2) physical traits are so variable that a single trait has virtually no diagnostic value.

We may define a *race*, simply, as a subgroup of Mankind more or less set apart by a combination of physical traits.

There are three, possibly four, great aggregates of races, usually called *stocks*: Caucasoid, Mongoloid, Negroid, and Archaic Caucasoid (or Australoid). The first three are often referred to as "White," "Yellow," and "Black." This is not really correct; peoples of North-Central India are Caucasoids, yet their skin-color is brown to dark-brown; certain tribes of Northeast Africa are Negroids, yet their skin-color is light-brown to brown. Variability also may be seen in stature: the tallest people in the world are found in Denmark and the Scottish Highlands, in East Africa, and in southernmost South America—respectively Caucasoid, Negroid, and Mongoloid. It must be re-emphasized that not one or two traits, but an aggregate of traits, of genetic origin, provides the only valid method of setting up stock or racial classification.

Caucasoids are the peoples of Europe, the adjacent shores of North Africa, and of Asia Minor and the northern half of India. The following races belong to the Caucasoid stock: Nordic, or Northwest European, Alpine or Central European, Mediterranean or Southwest European, Baltic or Northeast European, Dinaric or Southeast European, Armenoid in western Asia Minor, and Indio (often called Hindu) in North-Central India. These races are not, of course, absolutely limited to those geographical areas. For example, the Mediterranean race is found also in North Africa, especially Egypt, and in Asia Minor, where it is represented by the Beduin Arabs of Arabia. Other Caucasoid peoples are the Magyars, the Finns, and the Lapps, who show traces of Mongoloid mixtures, especially the last.

The Negroids are the peoples of Africa and Oceania, termed respectively the African Negroids and the Oceanic Negroids. The following African Negroid races are commonly recognized: Forest or West African or "True" Negro in West Africa, Sudanic in Central Africa, Nilotic in East Africa, Hamitic in Northeast and North Africa, Bantu (better Bantu-speaking) in South Africa, and Bushman-Hottentot in the Kalahari Desert of South Africa. The Oceanic Negroids are commonly called Melanesian or Papuan, and are found chiefly in Borneo, New Caledonia, the Solomons, the Hebrides and Fiji.

Of special interest among Negroids are Pygmies, who average about four feet in stature. They are found in Africa in the Congo region, in the Ituri Forest, and in Oceania on the Andaman Islands, the Malay Peninsula, the Philippines, and Borneo.

The Mongoloids are basically the peoples of Asia, but are also in the Western Hemisphere as the American Indians, and are represented in Malaysia and in Oceania. The Mongoloids are usually divided into the following races: Sinic of China and Japan, Palearctic of Siberia, Turkic and Tungic or Mongolic of Central Asia, and Malayan of Malaysia. In the Western Hemisphere they are found as Eskimos and the Indians of the Americas. In Polynesia, i.e., in Samoa, Tonga, Hawaii and west to Easter Island, the Mongoloid stock is a basic element, with some Caucasoid and some Negroid (Melanesian?) admixture.

The Archaic Caucasoids are found in Australia as the Australian aborigines and in Japan as the Ainu. They may possibly be an element in Melanesia and in Ceylon and South India, e.g., the Toda, the Vedda, and other tribes.

This is a brief survey of the "stocks" and "races" of the world. There is much inter-mixing and some over-lapping. This leads to two very important biological observations: 1) *there are no pure races*; 2) *there are no superior or inferior races*. We know from history that all peoples, upon contact, have crossed their genetically-based physical traits. We know from human anatomy that in fundamental structure all peoples are identical.

As far as biological Man is concerned, what he is is related to his cultural environment, rather than to any innate (or inherited) ability or aptitude. There is no "German race," only a German nationality; there is no "Jewish race," only a Jewish socio-religious community; there is no "Aryan race," only an Aryan language; there is no "master race," only a political bombast!

RELIGION

RELIGIONS OF THE WORLD

Religion	Area of greatest concentration	Estimated number of adherents	Percentage of world population
Roman Catholic	Italy, France, United States	315,000,000	15.
Orthodox Eastern (including Greek and Russian Orthodox)	U. S. S. R. and eastern Mediterranean	117,700,000	5.

"Protestant" Groups over 50,000.....	212,336	41,943,104	36,942,911
Other Groups.....	22,019	1,791,557	1,590,622
Total.....	253,762	72,492,669	59,717,107

The summary of latest official reports of church membership, reveals a total of 72,492,669 persons, the highest ever reported. On July 1, 1944, the total population of the continental United States was estimated by the Bureau of the Census to be 138,100,874 persons. The total reported for church membership in 1943-1944 is 52.5 percent of the total population, the highest ever reported. In 1890 the proportion of church membership to population was 22.2 percent. The proportion of church membership officially reported has steadily increased since 1890. The Decennial Church Census, carried out under a 1929 Act of Congress, will not be undertaken until early in 1947.

*In many cases estimated.

History of Leading Religious Groups in the United States

Source: Yearbook of American Churches.

Advent Christian Church.—A branch of the original Adventist group, which, under Jonathan Cummings, withdrew and organized in 1861. This group held to the belief in the utter extinction of the wicked after the resurrection.

Seventh Day Adventists.—This body developed out of the Adventist movement (1833-1844), which emphasized the imminent personal return of Jesus Christ. It emphasized the observance of the seventh-day Sabbath and in 1863 was numerous enough to organize a conference. At present it has twelve world divisions and carries on extensive publishing and medical work.

Assemblies of God.—Independent, pentecostal, evangelical, missionary churches associated for cooperative effort in district and general councils. Organized in Arkansas in 1914.

Northern Baptist Convention.—The early historical local independency of Baptist churches in America tended to impede the formation of any general organization until in 1814 a General Missionary Convention was formed to permit Baptists to express themselves in terms of missionary activities. In 1845, the state conventions in the South withdrew to organize the Southern Baptist Convention. In 1907, the Northern Baptist Convention was organized, a delegated body under whose direction the many agencies of the Baptists in the North and West now operate.

Southern Baptist Convention.—In 1845, Southern Baptists withdrew from the General Missionary Convention over the question of slavery and other matters and formed the Southern Baptist Convention.

National Baptist Convention, U.S.A., Inc.—The older and parent convention of Negro Baptists. This body is to be distinguished from the National Baptist Convention of America, usually referred to as the "unincorporated" body. The "incorporated" Convention is a constituent member of the Federal Council of the Churches of Christ in America.

National Baptist Convention of America.—This is a body usually referred to as the "unincorporated" convention, not to be confused with the "incorporated" National Baptist Convention, U.S.A., Inc., from which this body withdrew in 1916.

American Baptist Association.—A group of independent Missionary Baptist churches in the Southwest, organized into an association in 1905. They adhere strictly to the

apostolic order of church polity and cooperation.

Colored Primitive Baptists.—A group of Negro Baptists opposed to all forms of church organization.

Free Will Baptists.—This is a body of Arminian Baptists centering in North Carolina, where the first church of this group was organized in 1727.

General Baptists.—An Arminian group of Baptists, first organized in England in 1611, later, in 1714, transplanted to Virginia, and found today in the Middle West.

National Baptist Evangelical Life and Soul Saving Assembly of U.S.A.—Organized in 1921 by A. A. Banks as a charitable, educational, and evangelical organization.

Primitive Baptists.—A large group of Baptists, largely through the South, who are opposed to all centralization, to modern missionary societies, and to Sunday schools. They are sometimes called "antimissionary" Baptists.

The United American Free Will Baptist Church.—A body which set up its organization in 1901. Though ecclesiastically distinct, they are in close relations with the Free Will Baptists.

Church of the Brethren (Conservative Dunkers).—German pietists from Crefeld, Germany, under the leadership of Peter Becker, entered the colonies in 1719, and settled at Germantown, Philadelphia, Pa. They were called Dunkers (baptizers) and were immersionists. The members are conservative as to attire, oaths or affirmations, resistance to force, temperance, and the like.

Buddhist Churches of America.—This body, established in Utah in 1942, represents Buddhism in this country, the faith based on "the anatman doctrine, supplemented by the idea of karma, and nirvana, the holy ease or a blissful mental state of absolute freedom from evil."

Christian and Missionary Alliance.—An evangelistic and missionary movement, organized by the Rev. A. B. Simpson, in New York, in 1887. It stresses "the deeper Christian life and consecration to the Lord's service."

Church of Christ, Scientist.—A church founded by Mary Baker Eddy in 1879 to restore the healing power of original Christianity. As defined by Mrs. Eddy, religion is the scientific system of divine healing.

Church of God.—This body, to be differentiated from the Church of God with

headquarters at Anderson, Ind., is a holiness group and pentecostal. It began in 1866 in Tennessee, under the name of Christian Union, reorganized in 1902 as the Holiness Church. In 1907 it adopted the name above.

Church of God (Anderson, Ind.).—This group is one of the largest of the groups which have taken the name "Church of God." Its headquarters are at Anderson, Ind. It originated about 1880 and emphasizes Christian unity.

Church of God and Saints of Christ.—A Negro body organized in Kansas by William S. Crowdy, who taught that the Negro people are descendants of the ten lost tribes of Israel. His followers consequently observe the Old Testament feast days and use Hebrew names for the months.

Church of God in Christ.—Organized in Kansas in 1895, by C. P. Jones and C. H. Mason, who believed there was no salvation without holiness; incorporated 1897.

Church of the Nazarene.—One of the larger holiness bodies, organized in Chicago, October 1907. It is in general accord with the early doctrines of Methodism and emphasizes entire sanctification.

Churches of Christ.—This body is made up of a large group of churches, formerly reported with the Disciples of Christ, but since the religious census of 1906, reported separately. They are strictly congregational and have no organization larger than the local congregation. They are very conservative and do not collect or furnish statistics.

Churches of God in North America (General Eldership).—This group emerged out of a revival movement among the Germans in Pennsylvania in 1825, under the leadership of John Weinbrenner, a German Reformed minister. The Bible is the only rule of faith and practice.

Congregational Christian Churches.—Congregational churches date back to the Pilgrim Fathers and the early colonists of New England in 1620. The Christian churches date back to the Wesleyan and revival movements at the end of the eighteenth century. These two groups of churches were merged at Seattle, Wash., in 1931.

Disciples of Christ.—In the revival period of the early nineteenth century, a movement under Thomas Campbell and his son, Alexander, resulted in the establishment of a Fellowship called Christians or Disciples. Believing that sects are unscriptural, they are biblicists and immersionists.

Greek Orthodox Church (Hellenic).—Greek-speaking Orthodox Christians have been scattered parishes in the U.S. for the past seventy years. These were first under the jurisdiction of the Metropolitan of Athens and later under the Patriarchate of Constantinople. Political changes in Europe

have been reflected in this country and have brought difficulties in all branches of the Orthodox Church. In 1931, a general convention held in New York City under the presidency of Archbishop Athenagoras brought a large measure of unity and order.

Russian Orthodox Church.—The Russian Orthodox Church entered Alaska in 1792 before its purchase by the United States. In 1872, its headquarters were moved to San Francisco and in 1905 to New York.

Serbian Orthodox Church.—This body of the Eastern Orthodox Church, formerly under Russian jurisdiction, now has a diocese of its own.

Ukrainian Orthodox Church of America.—Organized in 1928, when the first convention was held. The Rt. Rev. Bishop Bohdan was consecrated by order of Oecumenical Patriarchate of Constantinople, in 1937.

Evangelical and Reformed Church.—This body was formed on June 26, 1934, at Cleveland, Ohio, by a union of the Evangelical Synod of North America and the Reformed Church in the United States. The union was unique in that it left all details to be adjusted afterwards. The constitution was declared in effect at the General Synod, which met at Lancaster, Pa., in June 1940. The merged boards were organized and on February 1, 1941, took over the work carried on by the two former denominations.

Evangelical Church.—This group had its beginning in the evangelistic movement of the early Nineteenth century. Its founder was Jacob Albright. The first classes formed in 1800 and the Church itself was organized in 1807. In doctrine this group is Arminian and in government Methodistic. In November, 1946, this church merged with the Church of the United Brethren in Christ to form the Evangelical United Brethren Church.

Evangelical United Brethren Church.—See Evangelical Church and the Church of the United Brethren in Christ.

Religious Society of Friends (Five Years Meeting).—In 1902, twelve of the fourteen yearly meetings of Friends entered into a loose confederation, forming the Five Years Meeting. Two of the original meetings (Kansas and Oregon) have withdrawn. Ohio and Philadelphia never joined. Together, however, these yearly meetings and the Five Years Meeting form what is known as the Orthodox group of Friends.

Independent Fundamental Churches of America.—Organized in 1930, at Cicero, Ill., by representatives of various independent churches.

Jehovah's Witnesses.—Jehovah's Witnesses are Christians not identified with any sect or denomination. They are associated with the corporations known as the Watch Tower Bible & Tract Society, Incorporated.

porated, and International Bible Students Association. Jehovah's Witnesses have groups in practically all cities throughout the United States, as well as in other parts of the world, for the purpose of regular Bible study. They do not keep a membership roll, nor do they compile any census regarding attendance at their meetings.

Jewish Congregations.—Jews arrived in the colonies before 1650. The first congregation is recorded in 1656, in New York City, the Shearith Israel (Remnant of Israel).

Church of Jesus Christ of Latter-Day Saints.—A group in which the Bible, the Book of Mormon, the Doctrine and Covenants and the Pearl of Great Price are regarded as the word of God. The primitive church organization is sought and the same gifts of tongues, prophecy, revelation, visions, healings and interpretation of tongues are continued.

Reorganized Church of Jesus Christ of Latter-Day Saints.—A division among the Latter-Day Saints (Mormons) occurred on the death of Joseph Smith in 1844. His son, Joseph Smith, became presiding officer of this group which has established headquarters at Independence, Mo.

American Lutheran Church.—This Church is a constituent body of the American Lutheran Conference. It is itself the result of the merger in 1930 of the Evangelical Lutheran Joint Synod of Ohio and Other States (org. 1918), the Evangelical Lutheran Synod of Iowa and Other States (org. 1854), and the Lutheran Synod of Buffalo (org. 1845).

Evangelical Lutheran Augustana Synod of North America.—This group, whose constituency originally was of Swedish extraction, is a member of the American Lutheran Conference. Organized in 1860.

Norwegian Lutheran Church of America.—In 1917, the United Norwegian Church, the Norwegian Synod, and the Hauge Synod united under the above name. In 1930, the group became a constituent part of the American Lutheran Conference.

Lutheran Free Church.—This group was organized in 1897 as the result of differences of opinion in the United Norwegian Church over the control of the Augsburg Seminary. It became a constituent part of the American Lutheran Conference in 1930.

United Danish Evangelical Lutheran Church in America.—This group was organized in 1896, the union of two Danish Lutheran groups, the Danish Church Association, and the Danish Church in North America. In 1930 it became a constituent part of the American Lutheran Conference.

Evangelical Lutheran Synod of Missouri, Ohio, and Other States.—This group, the largest constituent part of the Synodical Conference, was organized in 1847, holds to an unwavering confessionalism and is

the leader in the conservative group among the Lutherans.

The Evangelical Lutheran Joint Synod of Wisconsin and Other States.—This group, a constituent part of the Synodical Conference, was organized in Wisconsin in 1851.

United Lutheran Church in America.—This group dates back to the Ministerium of Pennsylvania, organized in 1748, and beyond that to early colonial days. It represents the union of the General Synod, the General Council, and the United Synod of the South in 1918.

The General Conference of the Mennonite Church of North America.—This is the oldest Mennonite conference in the U.S. and next to the largest numerically. It was organized in 1860 in Iowa.

Mennonite Church.—The largest group of the Mennonites, who began arriving in the U.S. in 1683, settling in Germantown, Pa. They derive their name from Menno Simons, their outstanding leader, born 1492.

African Methodist Episcopal Church.—This group was formed in Philadelphia in 1816 and extended throughout the South after the Civil War.

African Methodist Episcopal Zion Church.—This group broke away from the Methodist Episcopal Church and organized in 1821, setting up its own first conference in Philadelphia.

Colored Methodist Episcopal Church.—In 1870, the General Conference of the M.E. Church, South, approved the request of its colored membership for the formation of their conferences into a separate ecclesiastical body.

Free Methodist Church of North America.—This group grew out of a movement in the Genessee Conference of the Methodist Episcopal Church about 1850 toward more original Methodism. Organized in 1860.

The Methodist Church.—In April 1939 the Uniting Conference forming The Methodist Church was held by representatives of the Methodist Episcopal Church, the Methodist Episcopal Church, South, and the Methodist Protestant Church. The Methodist Church in the United States originated with the efforts of John and Charles Wesley, leaders of the revival movements in England in the eighteenth century. Methodist emigrants from Ireland planted Methodism in America about 1760. In 1771 Francis Asbury, one of Wesley's preachers, later a Bishop, landed in Philadelphia. The Methodist Episcopal Church was organized in 1784-85. The Methodist Episcopal Church, South, dates from 1846, the separation from the Methodist Episcopal Church having taken place over the slavery issue. The Methodist Protestant Church dates from 1830, and was organized over the issue of lay representation.

Moravian Church (Unitas Fratrum).—In 1734, Moravian missionaries of the pre-Reformation faith of John Huss came to Georgia and in 1740 to Pennsylvania. They established the Moravian Church, which is broadly evangelical, liturgical, with an episcopacy as a spiritual office and in form of government "confidential."

Pentecostal Church of God in America.—Organized in 1919 at Chicago, the first national convention was held in October 1940.

Polish National Catholic Church.—After a long period of dissatisfaction with Roman Catholic Administration in many Polish parishes, this group was organized in 1904.

Colored Cumberland Presbyterian Church.—In 1869, the Negro churches of the Cumberland Presbyterian Church were set apart by the General Assembly with their own ecclesiastical organization.

Cumberland Presbyterian Church.—In 1806, a presbytery (Cumberland) of the Presbyterian Church was dissolved by the Synod of Kentucky on account of its attitude toward revivalism. Members of the presbytery organized as an independent body in 1810 and became the Cumberland Presbyterian Church. When this body attempted to reunite with the Presbyterian Church in 1906, a minority preferred to continue as an independent church as above.

Presbyterian Church in the U.S.—This group is the branch of the Presbyterian Church which separated from the main body at the time of the Civil War. It is often called the "Southern" Presbyterian Church.

Presbyterian Church in the United States of America.—This group, distinguished by its representative form of government and its Calvinistic theology, appeared among the earliest colonists of America. Its first church was established about 1640 and its first presbytery in 1706.

United Presbyterian Church of North America.—This group dates back to the Reformed Presbyterian (Covenanter) Church (1643) and the Associate Presbyterian Church (Seceder) Church (1733), both of Scotland. These two groups appeared in America in 1774 and 1753 respectively. They reunited and became the Associate Reformed Presbyterian Church in 1782. A minority, however, continued as the Associate Presbyterian Church. In 1858 the two groups reunited and became the United Presbyterian Church.

The Protestant Episcopal Church.—This group entered the colonies with the earliest settlers (Jamestown, Va., 1607), as the Church of England. It became autonomous and adopted its present name in 1789.

Christian Reformed Church.—A group of Dutch Calvinists which dissented from the

Reformed Church in America in 1857 and which was strengthened by later accessions from the same source and by immigration.

Reformed Church in America.—This group was established by the earliest Dutch settlers of New York as the Reformed Protestant Dutch Church in 1628. It embraces many of the historic early colonial churches of New York and New Jersey and today has many strong churches in the middle and far west.

The Roman Catholic Church.—The largest single group of Christians in the U.S., the Roman Catholic Church is under the spiritual leadership of Pope Pius XII. This group dates back to the priests who accompanied Columbus on his second voyage to the New World. A settlement, later discontinued, was made at St. Augustine, Fla. The continuous history of this Church in the colonies began at St. Mary's in 1634, in Maryland.

The Salvation Army.—An evangelistic organization, with a military government, first set up by General William Booth (1829-1912) in England and introduced into America in 1880.

Evangelical Mission Covenant Church of America.—A transplantation of a free church to the U.S. in 1885. Until recently the name has been the Swedish Evangelical Mission Covenant Church.

International General Assembly of Spiritualists.—Organized in Buffalo, N. Y. in 1936 for the purpose of chartering Spiritualist churches.

Triumph of the Church and Kingdom of God in Christ.—Organized in 1902 in Georgia by Elder D. Smith, emphasizing sanctification and the second coming of Christ.

Unitarian Churches.—The Unitarian movement in Congregationalism, beginning in the eighteenth century, produced the American Unitarian Association in 1825. In 1865 a national conference was organized.

Church of the United Brethren in Christ.—Under the leadership of Philip William Otterbein, a German Reformed minister, and Martin Boehm, a Mennonite, an evangelistic movement among the Germans in Pennsylvania resulted in the establishment of this body in 1800. In November, 1946, this church joined with the Evangelical Church to form the Evangelical United Brethren Church.

The Universalist Church of America.—This group originated in the United States about 1785. "The bond of fellowship in this church as adopted at Washington in 1935 shall be a common purpose to do the will of God as Jesus revealed it and to cooperate in establishing the Kingdom for which He lived and died."

Religious Groups with 50,000 Members and Over, 1944

The Church of England

The history of the Christian Church in England begins with St. Augustine, who was sent to England in A.D. 597 by Pope Gregory the Great to convert the Saxons

Christianity. At that time, Canterbury was the capital of the kingdom of Kent. King Ethelbert gave the missionaries permission to preach in his kingdom, as his queen was a Christian princess of France. Converting the king to Christianity, Augustine was given by the pope the title of Archbishop of Canterbury and Primate of England. An old Roman temple was destroyed as the first Cathedral. This was burned down in 1067, and after a second fire in 1174, the present Cathedral was started.

Archbishop Becket was murdered in the cathedral in 1170 and buried behind the altar. He was canonized as St. Thomas of Canterbury and pilgrims came from all

over England to worship at the shrine erected to him in the rebuilt cathedral. Chaucer, in his "Canterbury Tales," writes of such a pilgrimage. The pilgrims rode at an easy pace called a Canterbury gallop, from which we get the word "canter."

Until 1534, during the reign of Henry VIII, the Church of England remained obedient to the Pope and to medieval traditions. At that time Parliament passed the Act of Supremacy, which decreed that the king and his successors should be the head of the Church of England. Thomas Cranmer was named the first protestant primate. Queen Elizabeth made the separation from Rome final. The King James version of the Bible, which is still the translation used by all English-speaking Protestants, was published in 1611. Canterbury has remained the see of the Church to this date.

Archbishops of Canterbury

Sequence	Name	Year created	Sequence	Name	Year created
1	Augustine	597	40	Thomas Becket	1162
2	Laurentius	604	41	Richard (of Dover)	1174

(Note: MB—Missionary Bishop; CO—Coadjutor; S—Suffragan)

The Right Rev. Henry Knox Sherrill, of Boston, Presiding Bishop.

- Alabama: Charles C. J. Carpenter, 2015 Sixth Ave. N., Birmingham.
- Alaska: John Boyd Bentley, The Bishop's Lodge, Nenana, Alaska.
- Albany: George Ashton Oldham, 29 Elk St., Albany, N. Y.
- Arkansas: Richard Bland Mitchell, 509 Scott St., Little Rock.
- Atlanta: John Moore Walker, 108 E. 17 St., Atlanta, Ga.
- Bethlehem: Frank William Sterrett, Bishop's House, Bethlehem, Pa.
- California: Karl Morgan Block, 1055 Taylor St., San Francisco.
- Chicago: Wallace E. Conkling; Edwin J. Randall (S); 65 E. Huron St., Chicago, Ill.
- Colorado: Fred Ingle, 1313 Clarkson St., Denver.
- Connecticut: Frederick Grandy Budlong; Walter Henry Gray (S); 207 Farmington Ave., Hartford.
- Cuba: Alex Hugo Blankenship, Calle 18, No. 154, Vedado, Havana.
- Dallas: Henry Tunis Moore, 5100 Ross Ave., Dallas, Tex.
- Delaware: Arthur R. McKinstry, Bishopstead, Wilmington.
- Easton: William McClelland, Bishop's House, Easton, Md.
- Eau Claire: William W. Horstick, 510 S. Farwell St., Eau Claire, Wis.
- Erie: Harold E. Sawyer, 323 W. Sixth St., Erie, Pa.
- Florida: Frank Alex Juhan, 324 Market St., Jacksonville.
- (South): John Durham Wing, Bishopstead, Winter Park.
- Fond du Lac: Harwood Sturtevant, 75 W. Division St., Fond du Lac, Wis.
- Georgia: Middleton Stuart Barnwell, Christ Church, Savannah.
- Harrisburg: J. Thomas Heistand, 321 N. Front St., Harrisburg, Pa.
- Honolulu: Harry S. Kennedy (MB), Queen Emma Square, Honolulu, Hawaii.
- Idaho: Frank Archibald Rhea (MB), Box 985, Boise.
- Indiana (Northern): Reginald Mallett, 710 Lincoln Way E., Mishawaka, Ind.
- Indianapolis: Richard A. Kirchoffer, 1537 Central Ave., Indianapolis, Ind.
- Iowa: Elwood L. Haines, Cathedral Close, Davenport.
- Kansas: Goodrich Robert Fenner, Bethany Grounds, Topeka.
- Kentucky: Charles Clingman, 421 S. Second St., Louisville.
- Lexington: William Robert Moody, Main St. and Bell Ct., Lexington, Ky.
- Long Island: James Pernette DeWolfe, The Cathedral House, Garden City, N. Y.; John Insley Blair Larned* (S), 170 Remsen St., Brooklyn, N. Y.
- Los Angeles: William Bertrand Stevens; Robert Burton Gooden (S), 615 S. Figueroa St., Los Angeles, Calif.
- Louisiana: John Long Jackson, 509 International Bldg., New Orleans.
- Maine: Oliver Leland Loring, 143 State St., Portland.
- Maryland: Noble C. Powell, 105 W. Monument St., Baltimore.
- Massachusetts: Henry Knox Sherrill, 155 Beacon St., Boston; Raymond Adams Heron (S), 1 Joy St., Boston.
- (Western): William Appleton Lawrence, 37 Chestnut St., Springfield.
- Michigan: Frank Whittington Creighton; Richard S. M. Emrich (S), 63 E. Hancock Ave., Detroit.
- (Northern): Herman R. Page, 503 E. Arch St., Marquette.
- (Western): Lewis Bliss Whittemore, 134 N. Division St., Grand Rapids.
- Milwaukee: Benjamin F. Price Ivins, 804 E. Juneau Ave., Milwaukee, Wis.
- Minnesota: Stephen Edwards Keeler; Benjamin T. Kemmerer (S), 1111 Nicollet Ave., Minneapolis.
- Mississippi: Duncan M. Gray, P. O. Box 953, Jackson.
- Missouri: William Scarlett, 1210 Locust St., St. Louis. (West): Robert Nelson Spencer, 415 W. 13 St., Kansas City.

*To become Bishop of the European Churches, Rome, Italy, Dec. 31, 1946.

- Montana: Henry H. Daniels, 9 Kohrs Block, Helena.
- Nebraska: Howard R. Brinker, 1111 City National Bank Bldg., Omaha.
(West): Howard R. Brinker (Provisional), 1111 City Nat. Bk. Bldg.
- Nevada: William Fisher Lewis (MB), 505 Ridge St., Reno.
- Newark: Benjamin M. Washburn; Theodore R. Lullow (S), 24 Rector St., Newark, N. J.
- New Hampshire: John Thomson Dallas, 63 Green St., Concord.
- New Jersey: Wallace John Gardner, 808 W. State St., Trenton.
- New Mexico: James Moss Stoney (MB), 318 W. Silver Ave., Albuquerque.
- New York: William Thomas Manning;* Charles Kendall Gilbert (S), Synod House, 110 St. & Amsterdam Ave., N. Y.
(Central): Malcolm Endicott Peabody, 437 James St., Syracuse. (Western): Cameron Josiah Davis, 237 North St., Buffalo.
- North Carolina: Edwin Anderson Penick, Hillsboro and St. Mary's Sts., Raleigh.
(East): Thos. Campbell Darst, 510 Orange St., Wilmington, N. C.
(Western): Robert Emmett Gribbon, 60 Ravenscroft Drive, Asheville.
- North Dakota: Douglass Henry Atwill (MB), 206 Eighth St., S., Fargo.
- Ohio: Beverly Dandridge Tucker, 2241 Prospect Ave., Cleveland.
(Southern): Henry Wise Hobson, 412 Sycamore St., Cincinnati.
- Oklahoma: Thomas Casady, P. O. Box 1091, Oklahoma City.
- Olympia: Simeon Arthur Huston, 808 American Bank Bldg., Seattle, Wash.
- Oregon: Benjamin Dunlap Dagwell, 541 Morgan Rd., Portland.
(Eastern): William Proctor Remington (MB), 613 S.E. Byers St., Pendleton.
- Panama Canal Zone: Reginald G. Gooden, Jr., P. O. Box 3435 Ancon, Canal Zone.
- Pennsylvania: Oliver J. Hart, 202 S. 19 St., Philadelphia, Pa.
- Philippine Islands: Norman S. Binsted (MB), 567 Calle Isaac Peral, Manila; Robert Franklin Wilner (S), 555 Calle Isaac Peral.
- Pittsburgh: Austin Pardue, 325 Oliver Ave., Pittsburgh, Pa.
- Puerto Rico: Charles F. Boynton (MB), Box 1729, San Juan, P. R.
- Quincy: William Leopold Essex, 601 Main St., Peoria, Ill.
- Rhode Island: James DeWolfe Perry,* 10 Brown St., Providence; Granville G. Bennett (S), 32 Westminster St., Providence.
- Rochester: Bartel H. Reinheimer, 210 Hiram Sibley Bldg., Rochester, N. Y.
- Sacramento: Archie W. N. Porter, 2600 Capitol Ave., Sacramento, Calif.
- Salina: Shirley H. Nichols, P. O. Box 345, Salina, Kans.
- San Joaquin: Francis D. Walters (MB), 1209 N. St., Fresno, Calif.
- South Carolina: Thomas N. Carruthers, 142 Church St., Charleston.
(Upper): John James Gravatt, Trinity Parish House, Columbia.
- South Dakota: William Blair Roberts (MB), 300 W. 18 St., Sioux Falls; Conrad H. Gesner (CO), 581 Portland Ave., St. Paul, Minn.
- Spokane: Edward Makin Cross, 2303 First Ave., Spokane, Wash.
- Springfield: John Chanler White, 821 S. Second St., Springfield, Ill.
- Tennessee: James Matthew Maxon,* 692 Poplar Ave., Memphis; Edmund P. Dandridge (CO), 2307 Elliston Pl., Nashville.
- Texas: Clinton Simon Quin, 1117 Texas Ave., Houston.
(North): Eugene Cecil Seaman (MB), 1516 Tyler St., Amarillo.
(West): Everett H. Jones, 108 W. French Pl., San Antonio.
- Utah: Arthur W. Moulton (MB), 444 E. First South St., Salt Lake City.
- Vermont: Vedder Van Dyck, Bishop's House, Burlington.
- Virginia: Fred Deane Goodwin, 110 W. Franklin St., Richmond. W. Roy Mason (S), Charlottesville.
(Southern): William Ambrose Brown, 618 Stockley Gardens, Norfolk.
(Southwestern): Henry Disbrow Phillips, 18 Elm Ave., S.W., Roanoke.
- Washington, D.C.: Angus Dun, Cathedral Close, Mt. St. Alban, Washington, D.C.
- West Virginia: Robt. E. L. Strider, 28 Maple Ave., Woodlawn, Wheeling.
- Wyoming: Winfred Hamlin Ziegler (MB), Box 17, Laramie.
- Liberia: Bravid Washington Harris, 281 Fourth Ave., New York 10, N. Y.

*To resign Dec. 31, 1946.

Methodist Bishops

 Carleton Lacy, Foochow, Fukien, China.
 F. H. Otto Melle, 30 Paulinen, Berlin-Lichterfelde, W. Germany.
 Shot. K. Mondol, Methodist Church, Hyderabad, India.
 J. Waskom Pickett, Byculla, Bombay, India (150 Fifth Ave., New York 11, N. Y.)
 Clement D. Rocky, 37 Cantonment Road, Lucknow, India.
 John A. Subhan, Robinson Memorial Church, Byculla, Bombay, India.
 Ralph A. Ward, 169 Ming Yuen Rd., Shanghai, China (150 Fifth Ave., New York 11, N. Y.)
 Arthur F. Wesley, Buenos Aires, Argentina.

Christian Holidays, 1947 to 1956

Source: Yearbook of American Churches.

The following table indicates when Easter and other important festival days occur during the next ten years. It also indicates the number of Sundays during Epiphany and after Pentecost for each year of the period. Easter may come as early as March 22 or as late as April 25, thus bringing a wide variation in the number of Sundays included in certain of the Christian seasons.

Year	Sundays in Epiphany	Ash Wednesday	Easter	Whitsunday	Sundays after Pentecost	First Sunday in Advent
1947.....	6	Feb. 19	Apr. 6	May 25	26	Nov. 30
1948.....	5	Feb. 11	Mar. 28	May 16	27	Nov. 28
1949.....	8	Mar. 2	Apr. 17	June 5	24	Nov. 27
1950.....	7	Feb. 22	Apr. 9	May 28	26	Dec. 3
1951.....	5	Feb. 7	Mar. 25	May 13	28	Dec. 2
1952.....	7	Feb. 26	Apr. 13	June 1	25	Nov. 30
1953.....	6	Feb. 18	Apr. 5	May 24	26	Nov. 29
1954.....	8	Mar. 3	Apr. 18	June 6	24	Nov. 28
1955.....	7	Feb. 23	Apr. 10	May 29	25	Nov. 27
1956.....	6	Feb. 14	Apr. 1	May 20	27	Dec. 2

Roman Catholic Pontiffs

Source: National Catholic Almanac.

Authorities differ concerning the correct list of the popes. The following is the official list printed in the *Annuario Pontificio* and taken from a series of portraits in the Basilica of St. Paul near Rome. One hundred and three popes have been Romans; one hundred and seven were natives of other parts of Italy; thirteen were French, eleven Greek, seven German, five Asiatic, three African, three Spanish, and two Dalmatian. Palestine, Thrace, Cilicia, Epirus, Galicia, Holland, Portugal, and England have each furnished one occupant of the papal chair.

Religious and Secular Holidays, 1947

NEW YEAR'S DAY—Wednesday, Jan. 1—A legal holiday in all states and the District of Columbia, New Year's Day has its origin in Roman times, when sacrifices were offered to Janus, the two-faced Roman deity who looked back on the past and forward to the future.

EPIPHANY—Monday, Jan. 6—The Feast of the Epiphany, falling on the twelfth day after Christmas, is observed by all branches of the Christian Church as the anniversary of the baptism of Jesus and His manifestation as the Son of God. This day is also the end of the Advent season and as "Twelfth Night" marks the beginning of the carnival season preceding Lent.

LINCOLN'S BIRTHDAY—Wednesday, Feb. 12—Observed as a legal holiday in Alaska, California, Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Dakota, Tennessee, Utah, Washington, West Virginia and Wyoming. In Massachusetts, the Governor issues a proclamation.

ST. VALENTINE'S DAY—Friday, Feb. 14—A day long held sacred to lovers, St. Valentine's Day may have come from the belief that on February 14 birds begin to mate, although this theory has no more

Religious and Secular Holidays, 1947—(cont.)

similarity than others that have been advanced. It is notable nowadays for the sending of a valentine, generally a card, embossed with a heart, to a loved one.

ASHROVE TUESDAY—Feb. 18—Falls on the Tuesday before Ash Wednesday. The word derives from the Anglo-Saxon, *scrif-tun*, meaning to "shrive" or to be confessed. The day is sometimes familiarly referred to as "Pancake Tuesday" by the English and was suggested by the need of using up the eggs and fat which were prohibited articles of diet during the 40 days of Lent. The day is occasioned by a carnival spirit (Mardi Gras, in France). In the United States, the celebration, marking the end of the carnival season, which began at the end of Advent, reached its highest popularity in New Orleans.

ASH WEDNESDAY—Feb. 19—The Wednesday after Quinquagesima Sunday, upon which begins the fast of the Lenten season. The name, from *dies cinerum*, meaning "day of ashes" is found in the earliest copies of the Gregorian Sacramentary and probably dates from at least the 11th century. The ceremony is marked by the marking of the cross on the foreheads of Roman Catholic worshippers by a priest who dips his thumb in ashes which come from burned remains of the palms used in the Palm Sunday the year before. The Protestant Church also observes the holiday but does not include the use of ashes.

WASHINGTON'S BIRTHDAY—Saturday, Feb. 22—The birthday of George Washington is celebrated as a legal holiday in every State of the Union, the District of Columbia and all territories. The observance began in 1796, three years before Washington's death.

ST. PATRICK'S DAY—Monday, March 17—St. Patrick, patron saint of Ireland, who died 493 A.D. at the venerable age of 66, has been honored in America since the first days of the nation. There are many dinners and meetings and perhaps the most notable part of the observance is the annual St. Patrick's Day parade on Fifth Avenue in New York City.

PALM SUNDAY—March 30—Is observed the Sunday before Easter to commemorate the entry of Jesus into Jerusalem. The ceremonies introducing the benediction of palms and of the procession probably had their origin in Jerusalem. It seems certain that the bearing of the palms during services was the earlier practice, then came the procession, and later the benediction of the palms.

GOOD FRIDAY—April 4—The Friday before Easter Sunday, observed by all branches of the Christian Church in commemoration of the Crucifixion, which is retold during services from the Gospel of

St. John. It is the only day of the year upon which Mass may not be said and only those who are in danger of death may receive Holy Communion. The eating of hot cross buns on this holiday is said to have originated in England.

FIRST DAY OF PASSOVER (Pesach)—Saturday, April 5—The Feast of the Passover, also called the Feast of Unleavened Bread, observed for eight days of which only the first and last days are holy days, commemorates the escape of the first born of the Jews from the Angel of Death, who took from the Egyptians their first born, thus fulfilling the prophecy of Moses. As they fled, the Jews ate unleavened bread and from that time the Jews have allowed no leavening in the home during Passover, the bread being replaced by matzoth.

EASTER SUNDAY—April 6—Observed in all Christian churches, Easter is the principal feast of the ecclesiastical year, and commemorates the resurrection of Jesus. It is celebrated on the first Sunday after the full moon which occurs on or next after March 21 and is therefore celebrated between March 22 and April 25 inclusive. This date was fixed by the Council of Nicaea in 325. The Venerable Bede, the English monk and ecclesiastical historian, claimed the word to have originated from the Anglo-Saxon *Eostre*, old Teutonic goddess of spring.

ASCENSION DAY—Thursday, May 15—Took place in the presence of His apostles 40 days after the resurrection of Jesus. It is traditionally held to have occurred on Mount Olivet in Bethany.

HEBREW PENTECOST (Shabuoth)—Sunday, May 25—The Feast of Harvest, in olden times observed at the end of the wheat harvest. The holiday is sometimes celebrated by decorating houses and synagogues with branches of trees, flowers and various plants. The word originates from the Greek meaning fifty and the day comes fifty days after Passover.

PENTECOST (Whitsunday)—May 25—In this case the day comes fifty days after Easter. It commemorates the descent of the Holy Ghost upon the Apostles fifty days after the resurrection. The sermon by the Apostle Peter which led to the baptism of 3000 who professed belief, originated the ceremonies that have since been followed. The word is believed to have come from "white Sunday" when, among the English, white robes were worn by those baptised on the day.

MEMORIAL DAY—Friday, May 30—Also known as Decoration Day, Memorial Day is a legal holiday in all the northern states and in the territories, and is also observed by the armed forces. In 1868, General John A. Logan, Commander in Chief of the Grand Army of the Republic, issued an

order designating the day as one in which the graves of soldiers would be decorated. The holiday was originally devoted to honoring the memory of those who fell in the War between the States, but is now also dedicated to the memory of the dead of all wars.

FLAG DAY—Sunday, June 14—Flag Day is not a legal holiday but is universally observed throughout the country, particularly in schools. The date originates in the resolution adopted on June 14, 1777.

INDEPENDENCE DAY—Friday, July 4—The day of the adoption of the Declaration of Independence in 1776, celebrated in all states and territories. The observance began in the next year in Philadelphia.

LABOR DAY—Monday, Sept. 1—Observed the first Monday in September in all states and territories, Labor Day was first celebrated in New York in 1882 under the sponsorship of the Central Labor Union, following the suggestion made earlier in the year by Peter J. McGuire, of the Knights of Labor, that the day be set aside in honor of labor.

JEWISH NEW YEAR (Rosh Hashanah)—Monday, Sept. 15—Based on the lunar calendar, Rosh Hashanah is the first of ten penitential days ending in the Day of Atonement.

DAY OF ATONEMENT (Yom Kippur)—Wednesday, Sept. 24—The holiest day of the Jewish year, observed over the centuries since the day was set aside by Moses, according to Biblical belief. All Jews refrain from daily pursuits and since the holiday begins at sundown of the preceding evening, fasting and services in the synagogues begin then and continue to the sundown of the following evening.

FEAST OF THE TABERNACLES (Suk-koth)—Monday, Sept. 29—The name comes from the booths or tabernacles, in which Jewish families lived while they gathered the harvest. One of the ancient customs still preserved in connection with this festival, which lasts eight days, is the hanging of fruits in synagogues to signify the harvest. Orthodox Jews still continue to build small huts in their back yards or on the roofs of houses.

COLUMBUS DAY—Sunday, Oct. 12—A legal holiday in thirty-four states, commemorating the discovery of America by Columbus in 1492. Quite likely the first celebration of Columbus Day was that organized in 1792 by the Society of St. Tammany or Columbian Order, more widely known as Tammany Hall. In 1892, a statue of Columbus was erected at the entrance to Central Park, just above Fifty-ninth Street, New York, and the plaza there was renamed Columbus Circle.

ELECTION DAY (in certain states)—Tuesday, Nov. 4—Since 1845, by Act of Con-

gress, the first Tuesday after the first Monday in November is the date for choosing Presidential electors, who meet December 3.

ARMISTICE DAY—Tuesday, Nov. 11—Commemorates the signing of the Armistice ending World War I in 1918. A Congressional resolution in 1926 directed the President to issue a proclamation annually for observance of the day. It is a legal holiday in many states and in others observance is asked by proclamation of the governors. As part of the day's observance, two minutes of silence are included in the ceremonies honoring the memories of the war dead. The most notable observance is at the Tomb of the Unknown Soldier in Arlington Cemetery, in Washington, D. C.

THANKSGIVING—Thursday, Nov. 27—Observed nationally on the last Thursday in November by proclamation of the President, the first such national proclamation having been issued by President Lincoln in 1863, on the urging of Mrs. Sarah J. Hale, editor of "Godey's Lady's Book" who long had pressed for a national day of thanksgiving. Most Americans believe that the holiday dates back to the day of thanks ordered by Governor Bradford of Plymouth Colony in New England in 1621 but scholars point out that days of thanks stem from ancient times.

FIRST SUNDAY IN ADVENT—Nov. 30—Advent is the season in which the faithful must prepare themselves for the advent of the Savior on Christmas. The four Sundays before Christmas are marked by special church services.

HANUKKAH (Festival of Lights)—Monday, Dec. 8—An eight-day festival, Hanukkah commemorates the purification of the Temple of Jerusalem after it had been desecrated by Antiochus Epiphanes, who set up a pagan altar there in 168 B.C. Eight lamps illuminated the temple and these have been memorialized in the Hanukkah lights, one for each night of the festival, which are lighted in Jewish homes and special prayers said.

CHRISTMAS (Feast of the Nativity)—Thursday, Dec. 25—The most important and the most widely celebrated holiday of the Christian year, it is observed as the anniversary of the birth of Jesus. Christmas customs are centuries old. The mistletoe, for example, comes from the Druids, who, in hanging the mistletoe, hoped for peace and good fortune. Use of such plants as holly comes from the ancient belief that such plants blossomed at Christmas. Comparatively recent is the Christmas tree, first set up in Germany in the 17th century, and the use of candles on trees developed from the belief that candles appeared by miracle on the trees at Christmas. The Germans also gave us the legend of Santa Claus, corrupted from St. Nicholas.

Anagram

My first is in silent, but never in loud;
My second's in love, but not ever in proud;
My third is in Robert, but never in Taft;
My fourth is in swindle, but never in graft;
My fifth is in happiness, never in bliss;
My whole will o'er take you before you
solve this.

ANSWER—Sleep.

Useful Hints

For Scalds—See Burns.

To remove butter and coffee stains from white garments, remove garments at meals, and attire yourself in a neatly fitting diving suit.

In shooting crap, never say die; say dice.—F. P. A.

U. S. Postal Regulations

First Class (limit 70 pounds):

Letters and written and sealed matter, 3 cents for each ounce, local and non-local, except that drop letters are subject to 1 cent for each ounce when deposited for local delivery at offices not having letter-carrier service, provided they are not collected or delivered by star-route carriers.

Government postal cards, 1 cent each.

Private mailing or post cards, 1 cent each.

Air Mail (limit 70 pounds):

Five cents for each ounce or fraction thereof on mainland of United States, Hawaii, Canal Zone, Puerto Rico, and other island possessions.

Second Class (no limit of weight):

Newspapers, magazines, and other periodicals containing notice of second-class entry, 1 cent for each 2 ounces or fraction thereof, or the fourth-class rate, whichever is lower.

Third Class (limit 8 ounces):

Circulars and other miscellaneous printed matter, also merchandise, 1½ cents for each 2 ounces.

Books (including catalogs) of 24 pages or more, seeds, cuttings, bulbs, roots, scions and plants, 1 cent for each 2 ounces.

Identical pieces of third-class matter may be mailed under permit in bulk lots of not less than either 20 pounds or 200 pieces, at the rate of 12 cents a pound, or fraction thereof, in case of circulars, miscellaneous printed matter and merchandise, and 8 cents a pound, or fraction thereof, in the case of books or catalogs having 24 pages or more, seeds, plants, etc., with a minimum charge of 1 cent a piece in either case. Apply to postmaster for permit.

For conditions and restrictions governing mail to our armed forces overseas, consult postmaster.

Fourth Class (over 8 ounces):

Limit of size, 100 inches length and girth combined. Limit of weight, 70 pounds.

Merchandise, books, printed matter, and all other mailable matter not in first or second class.

Special rates for books. Books (containing no advertising matter other than incidental announcements of books) all zones:

3 cents a pound plus 1 cent up to and including 16 pounds; 17 to 27 pounds, 3 cents a pound plus 3 cents; 28 to 40 pounds, 3 cents a pound plus 4 cents; 41 to 61 pounds, 3 cents a pound plus 5 cents; 62 to 70 pounds, 3 cents a pound plus 6 cents.

Library books. Books sent by authorized libraries to readers and when returned by such readers, for delivery within the first three zones or the State in which mailed: 4 cents for the first pound and 1 cent for each additional pound up to and including 47 pounds; 52 cents for 48 pounds and 1 cent for each additional pound up to and including 70 pounds.

Special Delivery and Special Handling Fees:

The prepayment of the special-delivery fee on second, third or fourth-class mail entitles it to the most expeditious handling and transportation practicable, and also entitles it to special delivery at the office of address.

Parcels of fourth-class matter endorsed "Special Handling" will be given the most expeditious handling, transportation and delivery practicable (but not special delivery) upon payment in addition to the regular postage of the following charge:

Weight	Special Delivery		Special Handling (Fourth class only)
	First class	Second, third or fourth class	
Up to 2 pounds	13¢	17¢	10¢
Over 2 pounds up to 10 pounds	20¢	25¢	15¢
Over 10 pounds	25¢	35¢	20¢

Registered, Insured and C. O. D. Mail:

The sending of registered or insured mail to Army and Navy personnel overseas is restricted. Consult postmasters for details. C. O. D. mail cannot be sent to Navy personnel on board ships or at overseas shore stations.

Registered Mail:

Fees for indemnity limited to:

\$ 5	\$.20	\$ 500	\$.95
5025	600	1.05
7535	700	1.15
10040	800	1.20
20055	900	1.25
30065	1,000	1.35
40080		

EXCEPTIONS (See Chart on opposite page)

In the first or second zone, where the distance by the shortest regular practicable mail route is 300 miles or more, the rate is the same as for the third zone.

On parcels collected on rural routes, the postage is 2 cents less per parcel than at rates in table when for local delivery and 3 cents less per parcel when for other than local delivery.

Parcels weighing less than 10 pounds, but exceeding 84 inches in girth combined, are subject to 10-pound rate. For special rates on catalogs, and other similar printed advertising matter, consult postmaster.

Domestic registered mail is subject to surcharges in addition to regular registry fees as follows: When declared value exceeds maximum indemnity covered by registry fee paid by not more than \$50, 2 cents; over \$50, not over \$100, 3 cents; over \$100, not over \$200, 4 cents; over \$200, not over \$400, 6 cents; over \$400, not over \$600, 7 cents; over \$600, not over \$800, 8 cents; over \$800 but less than \$1,000, 10 cents. If excess of declared value over maximum indemnity covered by registry fee paid is \$1,000 or more, additional fees for each \$1,000 or part of \$1,000 are: For local delivery or delivery in 1st zone, 11 cents; 2d zone, 12 cents; 3d zone, 14 cents; 4th zone, 15 cents; 5th or 6th zone, 16 cents; 7th or 8th zone, 18 cents. In the case of nonnegotiable securities, surcharge is based on the known or estimated cost of duplication.

Registration fee for mail without intrinsic value for which no indemnity is paid, 20 cents.

Insured Mail (third and fourth classes):

Fees for indemnity limited to:

\$5	\$.03	\$ 50	\$.15
210	20060

C. O. D. Mail:

Unregistered (third and fourth classes and sealed matter of any class bearing postage at the first-class rate). Fees for collections and indemnity limited to:

\$ 2.50	\$.15	\$100	\$.50
520	15055
2530	20060
5040		

Domestic mail of any class sealed against inspection and bearing postage at the first-class rate may be sent as registered collect-on-delivery mail. The maximum amount collectible is \$200; maximum indemnity, \$1,000. For further details, consult postmaster.

A demurrage charge of 5 cents a day is collected on each C. O. D. article which the addressee fails to accept within 20 days after the first attempt to deliver or the first notice of arrival at the office of address is given.

Fee of 5 cents is charged for notifying sender of nondelivery of C. O. D. mail.

Return receipts for registered or insured mail: fee, if requested at time of mailing, 4 cents; after mailing, 7 cents; at time of mailing to show address of delivery, 31 cents.

An additional charge of 20 cents is made when registered, insured or C. O. D. mail is restricted in delivery to addressee only, or to the addressee or order.

Certificates of mailing for ordinary mail of any class and additional certificates for ordinary, registered, insured and C. O. D. mail, 1 cent for each article described thereon.

Europe:

Service to Europe by steamer from New York City: THREE cents (\$.03) per half ounce in addition to regular postage. Articles prepaid the above fee are forwarded to the port of call of the steamer assigned mails for the countries involved. They are dispatched onward from the port of call by the best available opportunity, air mail or otherwise.

Air Mail Postage Rates

Domestic includes Alaska, Canal Zone, Canton Island, Guam, Hawaii, Midway Island, Puerto Rico, U. S. Virgin Islands, Wake Island, Canada and Mexico: FIVE cents (\$.05) per ounce.

Air mail addressed for delivery to APO's or Fleet Post Offices outside the continental United States care of Postmaster—FIVE cents (\$.05) per ounce—limit EIGHT ounces.

By air to U. S. Coast, or border, exchange offices and thence by ordinary means to destination, SEVEN cents (\$.07) per ounce or fraction. This rate includes air service in the United States and surface transportation onward to destination.

Foreign Air Mail Rates per half ounce in cents

The Record

By Grantland Rice

*When the game is done and the players creep
One by one to the League of Sleep,
Deep in the night they may not know
The way of the fight, the fate of the foe.
The cheer that passed, and applauding hands,
Are stilled at last—but the Record stands.*

*The errors made, and the base hits wrought;
Here the race was run! There the fight was fought!
Yet the game is done when the sun sinks low
And one by one from the field they go;
Their day has passed through the Twilight Gates,
But the Scroll is cast—and the Record waits.*

*So take, my lad, what the Great Game gives,
For all men die—but the Record lives.*

BASEBALL

THE POPULAR TRADITION that baseball was invented by Abner Doubleday at Coopers-town, N. Y., in 1839, has been enshrined in the Hall of Fame and National Museum of Baseball erected in that town, but research has proved that a game called "Base Ball" was played in this country and England before 1839. However, the first team baseball as we know it was played at the Elysian Fields, Hoboken, N. J., on June 19, 1846, between the Knickerbockers and the New York Nine. There was a gradual growth of baseball and an improvement of equipment and playing skill in the next fifty years. Soldiers returning home from the Civil War spread over the country the game they had learned to play in their camps.

Historians have it that the first pitcher to throw a curve was William A. (Candy) Cummings in 1867. The Cincinnati Red Stockings were the first all-professional

team and in 1869 they played 64 games without a loss. The standard ball of the same size and weight, still the rule, was adopted in 1872. The first catcher's mask was worn in 1875. The National League was organized in 1876. The first chest protector was donned in 1885. The three-strike rule was put on the books in 1887 and the four-ball ticket to first base came in 1889. The pitching distance, formerly shorter, was lengthened to 60 feet 6 inches in 1893 and the rules have been only slightly modified since that time.

The American League, under the vigorous leadership of B. B. Johnson, blossomed forth as a major league in 1901. Judge Kenesaw Mountain Landis, by action of the two major leagues, became Commissioner of Baseball in 1921 and, upon his death (1944), Albert B. Chandler, former United States Senator from Kentucky, was elected to that office (1945).

World Series Box Scores, 1946

FIRST GAME

At St. Louis, Oct. 6

A home run by Rudy York with two out in the tenth inning gave the heavily-favored Red Sox a 3-to-2 decision over the Cardinals in the first game. The Redbirds were leading, 2 to 1, entering the ninth inning, but the Red Sox sent the game into overtime, by tying the score with two out.

Boston	0	1	0	0	0	0	1	1—3
St. Louis	0	0	0	0	1	0	1	0—2

Runs batted in—Higgins, Musial, Garagiola, McBride, York.

Two-base hits—Musial, Garagiola. Three-base hit—Slaughter. Home run—York. Stolen base—Schoendienst. Sacrifices—Marlon, Moore. Earned runs—Boston 3, St. Louis 2. Left on bases—Boston 10, St. Louis 8. Bases on balls—Off Pollet 4 (Doerr, Williams 2, Hughson); Hughson 2 (Slaughter, Walker). Struck out—By Hughson 5 (Kurowski, Moore, Walker, Garagiola, Pollet); Pollet 3 (McBride, Doerr, Partee); Johnson 1 (Marlon).

Pitching summary—Off Hughson 7 hits, 2 runs in 8 innings; Johnson 0 hits, 0 runs in 2. Hit by pitcher—By Pollet (York); Hughson (Kurowski). Winning pitcher—Johnson. Umpires—Ballanfant (NL), plate; Hubbard (AL), 1b; Barlick (NL), 2b; Berry (AL), 3b. Time of game—2:39. Attendance—36,218.

SECOND GAME

At St. Louis, Oct. 7

Harry (The Cat) Brecheen, ace Cardinal southpaw, was the dominant figure as the Redbirds blanked the Red Sox, 3 to 0, in the second game and evened the series. Brecheen, in command all the way, allowed four hits and drove in the first Cardinal run in the third inning. In the sixth frame the Cards scored their final two runs by capitalizing on two hits, an error and a force play.

THIRD GAME

At Boston, Oct. 9

The combination of Dave Ferriss' superb pitching and Rudy York's hitting was too much for the Cardinals to hurdle in the third game, which went to the Red Sox, 4 to 0. York came through with his second home run of the series, this time with two men in the first inning.

FIFTH GAME

At Boston, Oct. 11

Bouncing back from their humiliating defeat of the previous day, the Red Sox, behind the four-hit pitching of Joe Dobson, one of the lesser lights on the hurling staff, easily outscored the Cardinals, 6 to 3, in the fifth game. Dobson, who throws what he calls an "atom bomb pitch," struck out eight Redbirds.

SIXTH GAME

At St. Louis, Oct. 13

In the sixth game Harry Brecheen of the Cards again handcuffed the Red Sox with a smooth performance that ended in a 4-to-1 victory for the Redbirds. After a shaky start, in which he was equal to the task of making the redoubtable Rudy York hit into a double-play with the bases filled, the southpaw hit the stride he had shown in the second game to register his second series triumph.

Umpires—Hubbard (AL), plate; Barlick (NL), 1b; Berry (AL), 2b; Ballanfant (NL), 3b. Time of game—1:56. Attendance—35,768.

SEVENTH GAME

At St. Louis, Oct. 15

The sixteenth million-dollar series went down in history with the Cardinals topping the still heavily-favored Red Sox, 4 to 3, in the finale and annexing the world championship, four games to three. Daring base running by Enos Slaughter and excellent relief hurling by Harry Brecheen turned the tide in the Redbirds' favor.

The Red Sox did not give up without a struggle. They gained a one-run edge in the first frame and, after the Cards had gone ahead, 3 to 1, in the seventh, came back with two runs in the top of the eighth to tie the score.

But the inspired Cardinals could not be stopped. Slaughter singled to start their half of the eighth. Whitey Kurowski and Mel Rice were erased without advancing Slaughter. Then Harry Walker hit a double to left center and Slaughter, aided by slow fielding, made a sensational tour of the bases to score the winning run.

Brecheen, rushed in with only one day's rest, surrendered a double by Dom DiMaggio that chased in Boston's two runs in the eighth to tie the score, but from then on he took command and was credited with the victory. He thus became the first southpaw in the history of the classic to win three games in a single series.

The Cardinals' triumph enabled them to maintain their record of never having lost a seven-game series, while the Red Sox were humbled for the first time in series competition.

THREE-GAME SERIES WINNERS

When Harry Brecheen of the Cardinals won three games from the Red Sox in the 1946 series, he became the ninth pitcher in the classic's history to perform that feat. The others were: Deacon Phillippe, 1903; Bill Dinneen, 1903; Christy Mathewson, 1905; Babe Adams, 1909; Jack Coombs, 1910; Joe Wood, 1912; Urban Faber, 1917, and Stanley Coavaleskie, 1920.

Feller Sets Pitching Marks in 1946

Bobby Feller, the Cleveland Indians' speedball pitcher, capped his first full season back in action after serving in the U. S. Navy by breaking the major league record for strikeouts in a single season. Three days before the 1946 season ended Feller tied the mark of 343 strikeouts, made by Rube Waddell of the Philadelphia Athletics in 1904, and on the last day he fanned five Detroit batsmen to finish with a total of 348 strikeouts. Feller worked in 10 innings to achieve his record. In addition, Feller hurled a no-hit no-run game against the New York Yankees on April 30 and two one-hitters, to bring his lifetime total to two no-hitters and

eight one-hitters. This erased the record of two no-hitters and seven one-hitters held by Addie Joss, an old Cleveland pitcher.

Feller's 1946 strikeout record:

Opponent	Games	Strikeout
Chicago	9	66
Washington	7	59
New York	7	56
Boston	6	49
Philadelphia	6	41
St. Louis	7	40
Detroit	6	37
Totals	48	348

Toney—Vaughn Pitching Duel

On May 2, 1917, Fred Toney of the Reds and Jim Vaughn of the Cubs pitched a double no-hit no-run game for nine innings. In the tenth Vaughn allowed two hits,

which, coupled with an error, won for the Reds, 1-0, as Toney carried his hitless pitching through the last half of the inning.

National League Batting Champions

Two No-Hit Games in Majors in 1946

Ed Head of the Brooklyn Dodgers and Bobby Feller of the Cleveland Indians were the only pitchers in both major leagues to hurl no-hit no-run games during the 1946 season. Head's performance was against the Boston Braves on April 23, while Feller turned the trick against the New York Yankees one week later.

Kerr, Giants, Sets Fielding Mark

Buddy Kerr of the New York Giants set a major league fielding record for shortstops by completing 52 games in succession without an error in 1946. Kerr handled 275 chances faultlessly. Leo Durocher, playing with the Cincinnati Reds in 1931, set the previous mark of 51 errorless games, but he handled only 231 chances during his skein.

Giants' Great Winning Streak

The New York Giants, then managed by the late John McGraw, had two remarkable winning streaks in 1916, the first consisting of 17 victories in succession in the early part of the season and the second covering 26 games in a row at the tail end of the campaign. The first streak was oddly enough, made completely on the road, while the second skein was made at home. During the 26-game procession, still the major league record, the Giants swept seven double-headers. Actually the Giants played 27 games from September 7 to 30, but a 1-1 eight-inning tie with Pittsburgh in the second game of a twin bill played between the twelfth and thirteenth victories interrupted the record, but did not count against it. Despite their record, the Giants finished fourth, Brooklyn winning the pennant.

Wambsganss and E. Smith Starred in 1920 World Series

World series history was made in the
 1st game of the 1920 Brooklyn-Cleveland
 series when Bill Wambsganss, Indian sec-
 ond baseman, executed an unassisted triple
 play and Elmer Smith, Cleveland out-

fielder, became the first player to hit a
 home run with the bases filled. Smith's feat
 was duplicated by Tony Lazzeri in the 1936
 event between the New York Yankees and
 the New York Giants.

A number of new managers will lead major league teams in 1947. Stanley R. (Bucky) Harris was appointed pilot of the Yankees, while another change finds Herold (Muddy) Ruel in charge of the Browns. Johnny Neun was given the post left open when Bill McKechnie resigned as manager

of the Reds, McKechnie moving to the Indians as a coach.

Billy Herman replaced Frankie Frisch as leader of the Pirates. Another important move found Charlie Dressen, Dodgers coach, shifting to the Yankees as a coach under Harris.

Robinson Stars in Little World Series

The Montreal Royals, led by its Negro star, Jackie Robinson, won the 1946 Junior World Series, highlight of the minor league season, from Louisville, four games to two. Robinson, playing his first season in organized baseball, helped the International League champions win the pennant by 18½ games and topped the loop in batting with an average of .349. In the junior classic Robinson was held to one

hit in the first three games, then picked up seven safeties in the remaining three to finish with a .333 average. He will be looked over by the Brooklyn Dodgers during spring training.

The triumph was the first for Montreal in Little World Series competition. The Canadian team is the property of the Dodgers and is managed by the veteran Clay Hopper.

BOXING

WHETHER it be called pugilism, prize fighting or boxing, there is no tracing "the Sweet Science" to any definite source. Tales of rivals exchanging blows for fun, fame or money go back to earliest recorded history and classical legend. There was a mixture of boxing and wrestling called the "pancratium" in the ancient Olympic Games and in such contests the rivals belabored one another with hands fortified with heavy leather wrappings that were sometimes studded with metal. More than one Olympic competitor lost his life at this brutal exercise.

There was little law or order in pugilism until Jack Broughton, one of the early champions of England, drew up a set of rules for the game in 1743. Broughton, called "the father of English boxing", also is credited with having invented boxing gloves. However, these gloves—or "mufflers" as they were called—were used only in teaching "the manly art of self-defense" or in training bouts. All professional

championship fights were contested with "bare knuckles" until 1892 when John L. Sullivan lost the heavyweight championship of the world to James J. Corbett in New Orleans in a bout in which both contestants wore regulation gloves.

The Broughton rules were superseded by the London Prize Ring Rules of 1838. The 8th Marquess of Queensberry, with the help of John G. Chambers, put forward the "Queensberry Rules" in 1866, a code that called for gloved contests. Amateurs took quickly to the Queensberry Rules, the professionals slowly.

There is no official international set of rules for boxing even today. Amateur organizations set rules for amateurs in different countries and professional rules set by boxing commissions vary even in different sections of the United States, but the variations are for the most part minor. A prize fighter doesn't have to change his style greatly to ply his trade anywhere in the world.

LARGEST ATTENDANCE AT FIGHTS

The Jack Dempsey-Gene Tunney fight for the world's heavyweight championship at Sesqui-Centennial Stadium, Philadelphia, September 23, 1926, drew 120,757, the largest paid attendance. Tunney scored a ten-round decision over Dempsey and became the titleholder.

A crowd of 135,000 persons saw the Fraternal Order of Eagles' free card at Milwaukee, Wis., August 18, 1941. Tony Zale knocked out Billy Pryor in the main bout.

SHORTEST FIGHTS ON RECORD

Rudy Zymek knocked out Alex Luke, 11 seconds, Newark, N. J., October 9, 1939.

Willard Dean knocked out Claude Allen, 11 seconds, Corpus Christi, Texas, May 12, 1940.

Irish Jimmy Pierce knocked out Tommy Jessup, 11 seconds, Holyoke, Mass., March 9, 1942.

Joe Jakes knocked out Al Foreman, 11 seconds, Broadway Arena, Brooklyn, January 13, 1942.

HISTORY OF HEAVYWEIGHT CHAMPIONSHIP FIGHTS

(Bouts in which title changed hands)

July 8, 1889, Richburg, Miss.—John L. Sullivan (198) beat Jake Kilrain (195), 75 rounds. (Last bare-knuckle championship fight.)

Sept. 7, 1892, New Orleans, La.—James J. Corbett (178) defeated Sullivan (212), 21 rounds. (Used big gloves for first time.)

March 17, 1897, Carson City, Nevada—Bob Fitzsimmons (167) knocked out Corbett (183), 14 rounds.

June 9, 1899, Coney Island, New York—James J. Jeffries (206) knocked out Fitzsimmons (167), 11 rounds.

March, 1905—Lack of opposition forced Jeffries to retire. He named Marvin Hart and Jack Root as the leading contenders and agreed to referee their fight at Reno, Nevada, July 3, 1905, with the stipulation that he would term the winner the world's heavyweight champion. Hart (190) knocked out Root (171), 12 rounds.

Feb. 23, 1906, Los Angeles, Calif.—Tommy Burns (180) defeated Hart (188), 20 rounds, and claimed the title. Another claimant was Philadelphia Jack O'Brien, who had fought a 20-round draw with Burns, Nov. 28, 1906.

May 8, 1907, Los Angeles, Calif.—Burns (180) beat O'Brien (167), 20 rounds.

Dec. 26, 1908, Sydney, New South Wales—Jack Johnson (196) knocked out Burns (176), 14 rounds. Police stopped the fight.

July 4, 1910, Reno, Nevada—Johnson (208) knocked out Jeffries (227), 15 rounds. (Jeffries came out of retirement to regain title but failed.)

April 5, 1915, Havana, Cuba—Jess Willard (230) knocked out Johnson (205½), 26 rounds.

July 4, 1919, Toledo, Ohio—Jack Dempsey (187) knocked out Willard (245), 3 rounds.

Sept. 23, 1926, Philadelphia—Gene Tunney (189½) defeated Dempsey (190), 10 rounds.

July 23, 1928, New York City—Tunney (192) knocked out Tom Heeney (203½), 11 rounds, and retired.

July 12, 1930, New York City—Max Schmeling (188) fought Jack Sharkey (197) for the title, Schmeling winning on a foul in the 4th round.

June 21, 1932, Long Island City—Sharkey (205) defeated Schmeling (188), 15 rounds.

June 29, 1933, Long Island City—Primo Carnera (260½) knocked out Sharkey (201), 6 rounds.

June 14, 1934, Long Island City—Max Baer (209½) knocked out Carnera (263¼), 11 rounds.

June 13, 1935, Long Island City—Jim Braddock (193¼) defeated Baer (209½), 15 rounds.

June 22, 1937, Chicago—Joe Louis (197¼) knocked out Braddock (197), 8 rounds.

Ages at Which Heavyweight Titles Were Won

Bob Fitzsimmons and Jack Johnson, each at the age of 37, were the oldest world heavyweight kings to enter the ring in defense of their crown. The age of champion and challenger for each title bout in which a championship changed hands since Sullivan whipped Ryan for American honors in 1882 follows:

WINNER

John L. Sullivan, 24
James J. Corbett, 26
Bob Fitzsimmons, 35
James J. Jeffries, 24
Jack Johnson, 30
Jess Willard, 32
Jack Dempsey, 24

LOSER

Paddy Ryan, 30
John L. Sullivan, 34
James J. Corbett, 31
Bob Fitzsimmons, 37
Tommy Burns, 27
Jack Johnson, 37
Jess Willard, 36

WINNER

Gene Tunney, 27
Max Schmeling, 25
Jack Sharkey, 30
Primo Carnera, 25
Max Baer, 25
James J. Braddock, 30
Joe Louis, 23

LOSER

Jack Dempsey, 31
Jack Sharkey, 28
Max Schmeling, 27
Jack Sharkey, 31
Primo Carnera, 26
Max Baer, 26
James J. Braddock, 32

Willie Pep's Records

Willie Pep, in winning the world featherweight championship in 1943, broke and made several records. At the age of 20 he was the youngest boxer to hold a world's title in the last 40 years; he smashed the receipts record for a featherweight bout indoors; he never lost a decision; he had never fought a draw; had never won or lost a bout on a foul; had never boxed a newspaper decision—all within 10 months. He won 62 fights in succession before losing to Sammy Angott, March 19, 1943.

First Major International Fight

John C. Heenan, America, and Tom Sayers, England, were the principals in the first international heavyweight championship fight, Farnborough, England, April 17, 1860. They fought 37 refereed rounds and five unrefereed, that official quitting to avoid assault at the hands of rowdies, who broke into the ring. The bout was called a draw. Among the spectators were Prince Albert and Prime Minister Lord Palmerston. A humorous verse on the fight was attributed to Thackeray.

Other Boxing Titleholders

LIGHT HEAVYWEIGHT CHAMPIONS

- 1903 —Jack Root, George Gardner
- 1903-05 —Bob Fitzsimmons
- 1905-12 —Philadelphia Jack O'Brien
- 1912-16 —Jack Dillon

- 1932-33 —Jackie Fields
- 1933 —Young Corbett 3d
- 1933-34 —Jimmy McLarnin
- 1934 —Barney Ross
- 1934-35 —Jimmy McLarnin
- 1935-38 —Barney Ross
- 1938-40 —Henry Armstrong
- 1940-41 —Fritzie Zivic
- 1941-46 —Freddie Cochrane
- 1946 —Marty Servo (r), Ray Robinson

(o) Outgrew class. *Walcott lost on foul to Dixie Kid in 1904, but decision was disputed. Dixie Kid went abroad, outgrew class, and Walcott was again recognized as the champion. †Sullivan outgrew class. The title was claimed by Jimmy Gardner, Jimmy Clabby, Ray Bronson, Clarence (Kid) Ferns, Mike Gibbons, Kid Graves, Mike Glover, Ted Lewis, and Jack Britton but no one received recognition as titleholder until Ted Lewis established his claim in 1915. ‡Lewis outpointed Britton to gain undisputed possession of the crown on Aug. 31, 1915, and fought Britton a number of times over a period of four years with varying results until March 17, 1919, when Lewis again became the undisputed titleholder by knocking out Britton. (r) Retired.

JOHN L. SULLIVAN'S earnings from 1878 to 1915, including fights, vaudeville work and exhibition tours, were \$1,221,320. He received nothing when he lost the heavy-weight championship to Jim Corbett in 1892, there being a \$25,000 winner-take-all purse and a \$20,000 side bet on the outcome. Sullivan died in 1918.

MIDDLEWEIGHT CHAMPIONS

- 1867-72 —Tom Chandler (bare knuckles).
- 1872-81 —Geo. Rourke (bare knuckles and gloves)
- 1881-82 —Mike Donovan (r)
- 1884-91 —Jack (Nonpareil) Dempsey
- 1891-97 —Bob Fitzsimmons
- 1897-1907 —Tommy Ryan, Kid McCoy, Philadelphia Jack O'Brien (t)
- 1907-08 —Stanley Ketchel
- 1908 —Billy Papke
- 1908-10 —Stanley Ketchel
- 1910-13 —Billy Papke
- 1913 —Frank Klaus
- 1913-14 —George Chip
- 1914-17 —Al McCoy
- 1917-20 —Mike O'Dowd
- 1920-23 —Johnny Wilson
- 1923-26 —Harry Greb
- 1926 —Tiger Flowers
- 1926-31 —Mickey Walker (a)
- 1931-32 —Gorilla Jones (NBA); Ben Jey (N. Y. Comm.)
- 1932-37 —Marcel Thil*
- 1938 —Al Hostak and Solly Krieger (NBA)
- 1939 —Solly Krieger, Al Hostak (NBA); Ceferino Garcia (N. Y. Comm.)
- 1940 —Tony Zale (NBA); Ken Overlin (N. Y. Comm.)
- 1941 —Tony Zale (NBA); Billy Soose (N. Y. Comm.)†
- 1941-46 —Tony Zale

(r) Retired. (t) Title claimants. (a) Abandoned title. *Thil's international title disputed although his victory over Jones on a foul gave him clear claim. The N. Y. Comm. and NBA held elimination tournaments, Hostak emerging as NBA champion and Garcia as N. Y. titleholder. †Soose abandoned claim to title and Zale became undisputed ruler by defeating George Abrams, who had beaten Soose three times.

LIGHTWEIGHT CHAMPIONS

- 1885-96 —Jack McAuliffe*
- 1896-99 —Kid Lavigne
- 1899-02 —Frank Erne
- 1902-08 —Joe Gans
- 1908-10 —Battling Nelson
- 1910-12 —Ad Wolgast
- 1912-14 —Willie Ritchie
- 1914-17 —Freddie Welsh
- 1917-25 —Benny Leonard (r)
- 1925 —Jimmy Goodrich
- 1925-26 —Rocky Kansas
- 1926-30 —Sammy Mandell
- 1930 —Al Singer
- 1930-33 —Tony Canzoneri
- 1933-35 —Barney Ross
- 1935-36 —Tony Canzoneri
- 1936-38 —Lou Ambers
- 1938-39 —Henry Armstrong
- 1939-40 —Lou Ambers
- 1940-41 —Lew Jenkins
- 1941-42 —Sammy Angott†
- 1943 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott (NBA).
- 1944 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott, Juan Zurita (NBA).
- 1945 —Bob Montgomery (N. Y. Comm.), Juan Zurita, Ike Williams (NBA).
- 1946 —Bob Montgomery (N. Y. Comm.), Ike Williams (NBA).

*McAuliffe was champion of America, but never held the world crown, his battle for the world title with Jem Carney of England in 1887 resulting in a 74-round draw. (r) Retired. †Angott announced his retirement on Nov. 13, 1942, leaving title vacant, but approximately two months later announced his comeback as challenger for the crown.

FEATHERWEIGHT CHAMPIONS

- 1889 —Freddy Bogan
 1890 —Billy Murphy
 1892-1900—George Dixon
 1900-01—Terry McGovern
 1901 —Young Corbett (o)
 1904-08—Brooklyn Tommy Sullivan
 1908-12—Abe Attell
 1912-23—Johnny Kilbane
 1923 —Eugene Criqui
 1923-25—Johnny Dundee (o)
 1925-27—Louis (Kid) Kaplan (o)
 1927-28—Benny Bass
 1928 —Tony Canzoneri
 1928-29—Andre Routis
 1929-32—Battling Battalino (o)
 1932 —Tommy Paul (NBA); Kid Chocolate (N. Y. Comm.).
 1933-36—Freddie Miller
 1936-37—Petey Sarron
 1937-38—Henry Armstrong (a)
 1938-40—Joey Archibald
 1940-41—Harry Jeffra, Joey Archibald
 1941-42—Chalky Wright
 1942-46—Willie Pep
 (o)Outgrew class. (a)Abandoned title.

FLYWEIGHT CHAMPIONS

- 1916-23—Jimmy Wilde
 1923-25—Pancho Villa*
 1925 —Frankie Genaro
 1925-27—Fidel La Barba (r)
 1927 —Corporal Izzy Schwartz†
 1930 —Midget Wolgast (N. Y. Comm.); Frankie Genaro (NBA).
 1931-32—Young Perez†
 1932-35—Jackie Brown
 1935-38—Benny Lynch (r)
 1939 —Peter Kane (a)
 1943-46—Jackie Paterson

*Villa died in 1925, Genaro claiming title. †Schwartz was recognized as champion by N. Y. Comm., but conditions in the class became confused and were not straightened out until an elimination tourney was held in November, 1929. ‡Perez was recognized as world's champion by the International Boxing Union of Europe. (r)Retired. (a)Abandoned title.

International Bout Sets English Mark

A British record for gate receipts was set in 1946 when 12,000 fans paid \$176,000 to see Gus Lesnevich of the United States retain his world light heavyweight title by knocking out Freddie Mills, British contender, in the tenth round of their scheduled fifteen-round battle. The contest was held at the Harringay Stadium, London, on May 14.

Only Fighter to Hold Three Titles Simultaneously

Henry Armstrong won the featherweight championship from Petey Sarron at Madison Square Garden, October 29, 1937; welterweight title from Barney Ross, Madison Square Garden Bowl, May 31, 1938, and lightweight crown from Lou Ambers, Madison Square Garden, August 17, 1938.

BANTAMWEIGHT CHAMPIONS

- 1890-92—George Dixon (o)
 1894-99—Jimmy Barry (r)
 1899-1900—Terry McGovern (o)
 1901 —Harry Harris (o)
 1902-03—Harry Forbes
 1903-04—Frankie Neil
 1904 —Joe Bowker (o)
 1905-07—Jimmy Walsh (o)
 1910-14—Johnny Coulon
 1914-17—Kid Williams
 1917-20—Pete Herman
 1920-21—Joe Lynch
 1921 —Pete Herman
 1921-22—Johnny Buff
 1922-24—Joe Lynch
 1924 —Abe Goldstein
 1924-25—Eddie (Cannonball) Martin
 1925 —Charlie (Phil) Rosenberg (d)
 1929-35—Al Brown
 1935-36—Baltazar Sangchili
 1936 —Tony Marino
 1936-37—Sixto Escobar
 1937-38—Harry Jeffra
 1938-40—Sixto Escobar (r)
 1940-42—Lou Salica
 1942-46—Manuel Ortiz

(o)Outgrew class. (r)Retired. (d)Deprived of title when unable to make weight for championship bout.

Famous Firsts in Boxing

First famous fighter: Theagenes of Thaos, Champion of the Olympic Games, 450 B.C., winner of 1,406 battles with the cestus, a heavy iron-shodded glove. Most of his opponents were killed in these fights.

First modern ring champion: Jim Figg of England, 1719.

First set of boxing rules and first set of boxing gloves: Made by Jack Broughton, 1743.

First championship fight in America: Jacob Hyer beat Tom Beasley, 1816.

First glove fight: Between two English boxers, at Aix-la-Chapelle, France, October 8, 1818.

First contest in which motion pictures were filmed for general display to the public: Bob Fitzsimmons vs. Jim Corbett bout at Carson City, Nevada, 1897.

First million-dollar gate: Jack Dempsey vs. Georges Carpentier at Boyle's Thirty Acres, Jersey City, N. J., July 2, 1921 (\$1,789,238).

First fight broadcast: Dempsey vs. Carpentier, 1921, J. Andrew White announcer.

First fight to draw over 100,000 people: Jack Dempsey vs. Gene Tunney at Philadelphia, 1926 (120,757).

First fight on television: Eric Boon vs. Arthur Danahar, Harringway Arena, London, England, February 23, 1939.

Longest Fight on Record

Between Andy Bowen and Jack Burke at New Orleans, La., April 6, 1893. The 110-round fight took 7 hours, 19 minutes. Battle ended in a draw, the referee calling it no contest when the men couldn't continue.

Ring Record of Joe Louis

Born, May 13, 1914, Lexington, Alabama. Weight, 207 lb. Height, 6 ft. 2 in.

RECAPITULATION

Bouts, 59; knockouts, 50; won decisions, 8; knocked out by, 1.

Ring Earnings of Joe Louis

Joe Louis successfully defended his heavyweight championship twice in 1946—knocking out Billy Conn in the eighth round at the Yankee Stadium on June 19 and disposing of Tami Mauriello in the first round on Sept. 18, also at the Stadium. His cumulative ring earnings soared to \$3,059,647 when he received \$577,669 for the Conn fight and \$103,611 for the battle with Mauriello. Other bouts in which his share was more than \$100,000 were with Max Baer, 1935 (\$240,833); Max Schmeling, 1936 (\$140,959); James J. Braddock, 1937 (\$103,684); Tommy Farr, 1937 (\$102,578); Max Schmeling, 1938 (\$349,228); Tony Galento, 1939 (\$114,332); Bob Pastor, 1939 (\$118,400); Billy Conn, 1941 (\$153,905), and Lou Nova, 1941 (\$199,500).

Neil Memorial Award Winners

The Edward J. Neil Memorial Plaque is given annually by the Boxing Writers' Association of New York to the individual who has done the most to further the cause of the sport. The winners:

1938	Jack Dempsey	1943	The boxers in all branches of the Armed Forces of our country.
1939	Billy Conn	1944	Lt. Comdr. Benny Leonard, U.S.M.S.
1940	Henry Armstrong	1945	James J. Walker
1941	Joe Louis	1946	Tony Zale
1942	Sgt. Barney Ross		

1937

Jan. 11	Stanley Ketchel, Buffalo.....	KO 2
Jan. 27	Bob Pastor, Madison Square Garden.....	W 10
Feb. 17	Natie Brown, Kansas City.....	KO 4
June 22	James J. Braddock, Chicago.....	KO 8
	(Won heavyweight championship of the world)	
Aug. 30	Tommy Farr, Yankee Stadium.....	W 15

1938

Feb. 23	Nathan Mann, Madison Square Garden.....	KO 3
Apr. 1	Harry Thomas, Chicago.....	KO 5
June 22	Max Schmeling, Yankee Stadium.....	KO 1

1939

Jan. 25	John Henry Lewis, Madison Sq. Garden.....	KO 1
Apr. 17	Jack Roper, Los Angeles.....	KO 1
June 28	Tony Galento, Yankee Stadium.....	KO 4
Sept. 20	Bob Pastor, Detroit.....	KO 11

1940

Feb. 9	Arturo Godoy, Madison Square Garden.....	W 15
Mar. 29	Johnny Paychek, Madison Square Garden.....	KO 2
June 20	Arturo Godoy, Yankee Stadium.....	KO 8
Dec. 16	Al McCoy, Boston.....	KO 6

1941

Jan. 31	Red Burman, Madison Square Garden.....	KO 5
Feb. 17	Gus Dorazio, Philadelphia.....	KO 2
Mar. 21	Abe Simon, Detroit.....	KO 13
Apr. 8	Tony Musto, St. Louis.....	KO 9

BARE-KNUCKLE HEAVYWEIGHT CHAMPIONS, 1719-1892

- 1719—Jim Figg
 1734—George Taylor
 1740—Jack Broughton
 1750—Jack Slack
 1760—Bill Stevens
 1761—George Meggs
 1765—Bill Darts
 1777—Harry Sellers
 1780—Jack Harris
 1785—Tom (Jackling) Johnson
 1790—Big Ben Brain
 1792—Daniel Mendoza
 1795—John Jackson (retired)
 1802—Jem Belcher
 1805—Henry Pearce (Game Chicken)
 1808—John Gully (declined title)
 1809—Tom Cribb received belt, not transferable, and cup
 1824—Tom Spring received four cups; resigned title.
 1825—Jem Ward received belt, not transferable
 1838—James (Deaf) Burke claimed title
 1839—William Thompson (Bendigo) beat Burke; claimed championship; received belt from Jem Ward.
 1841—Nick Ward (Jem's brother) beat Ben Caunt, Feb. 2. In return match Caunt beat Nick Ward and received belt by subscription. It was transferable.
 1845—Thompson beat Caunt and got belt.
 1850—Bill Perry (The Tipton Slasher), after fight with Paddock, claimed title.
 1851—Harry Broome won title from Perry.
 1853—Perry claimed title when Broome forfeited £200 to him in a match; retired from ring on Aug. 13.
 1857—Tom Sayers beat Perry for £200 a side and new belt.
 1860—Sayers retired after 42-round draw with John C. Heenan (The Benicia Boy), leaving old belt open for competition.
- 1860—Sam Hurst (The Stalybridge Infant) beat Paddock and received belt.
 1861—Jem Mace beat Hurst.
 1862—Mace beat Tom King for £200 a side and the belt.
 1862—King beat Mace and claimed belt. Subsequently gave it up. Declined to meet Mace again. Mace claimed belt.
 1863—King beat Heenan for £1,000 a side.
 1865—Joe Wormald beat Andrew Marsden for £200 a side and belt, which had been claimed by both. Belt was given to Wormald, who forfeited £120 to Mace.
 1866—Mace and Joe Goss fought draw with £200 a side and belt at stake.
 1867—Wormald received £200 forfeit from Ned O'Baldwin and claimed belt when O'Baldwin failed to appear at starting place.
 1867—Mace and O'Baldwin drew; £200 a side; title and belt in abeyance.
 1868—Wormald and O'Baldwin drew; £200 a side and title in America.
 1869—Mike McCoole beat Tom Allen in America for world championship.
 1870—Mace beat Allen in America for world championship.
 1871—Mace and Joe Coburn fought draw for championship; £500 a side.
 1882—John L. Sullivan defeated Paddy Ryan for American championship only; 9 rounds, Mississippi City, Miss. (London Prize Ring rules).
 1885—Jem Smith beat Jack Davis for £100 a side and championship of England.
 1887—Jake Kilrain and Jem Smith drew; £2000 and Police Gazette Championship of World belt.
 1889—John L. Sullivan beat Jake Kilrain; £2000 a side and Police Gazette belt at Richburg, Miss., July 8. (Sullivan claimed world title because of draw fought by Kilrain with England's titleholder, Smith.)

WORLD CHAMPIONSHIP FIGHTS IN 1946

Date	Winner	Loser	Title at stake	Where held	Rounds	Attendance
Feb. 1	*Marty Servo	Freddie Cochran	Welterweight	New York	KO 4	17,378
Feb. 25	Manuel Ortiz	Luis Castillo	Bantamweight	San Francisco	KO 13	10,000
Apr. 30	Ike Williams	Enrique Bolanos	Lightweight (NBA)	Los Angeles	KO 8	19,000
May 3	Sal Bartolo	Jack Armstrong	Featherweight	Boston	KO 6	7,614
May 14	Gus Lesnevich	Freddie Mills	Light Heavyweight	London	KO 10	12,000
May 25	Manuel Ortiz	Kenny Lindsay	Bantamweight	Hollywood, Calif.	KO 5	6,000
June 7	Willie Pep	Sal Bartolo	Featherweight	New York	KO 12	9,881
June 10	Manuel Ortiz	Jackie Jurich	Bantamweight	San Francisco	KO 11	8,000
June 19	Joe Louis	Billy Conn	Heavyweight	New York	KO 8	45,266
June 28	Bob Montgomery	Allie Stolz	Lightweight	New York	KO 13	10,872
July 10	Jackie Paterson	Joe Curran	Flyweight	Glasgow, Scotland	15	50,000
Sept. 4	Ike Williams	Ronnie James	Lightweight (NBA)	Cardiff, Wales	KO 9	45,000
Sept. 18	Joe Louis	Tami Mauriello	Heavyweight	New York	KO 1	38,494
Sept. 27	Tony Zale	Rocky Graziano	Middleweight	New York	KO 6	39,827
Nov. 26	Bob Montgomery	Wesley Mouzon	Lightweight	Philadelphia	KO 8	12,416
Dec. 20	*Ray Robinson	Tommy Bell	Welterweight	New York	15	15,670

*Won championship.

†Gained undisputed possession of title.

IRISH FOOTBALL

Kerry won the All-Ireland football championship in 1946 by downing Roscommon, two goals and eight points to ten points on a replay. A crowd of 60,000 saw Kerry win its sixteenth title.

The all-Missouri Valley Conference basketball team for 1946, selected by member coaches, was composed completely of players from the champion Oklahoma A. and M. College first team.

Mangrum Open Golf Victor

A double-round play-off among Lloyd Mangrum, Byron Nelson and Vic Ghezzi highlighted the 1946 National Open golf championship at the Canterbury Club, Cleveland. The three finished the 72-hole event in a triple tie with 284s, four under par. The first play-off round also resulted in a tie, each posting a 72 for the eighteen holes. Mangrum won the crown by shooting another 72 in the second play-off round, while his rivals faltered, both finishing one stroke behind.

TRACK AND FIELD

RUNNING, jumping, hurdling and throwing weights—track and field sports, in other words—are as natural to boys and young men as eating, drinking and breathing. Unorganized competition in this form of sport goes back beyond the Cave Man Era. Organized competition begins with the first recorded Olympic Games in Greece, 776 B. C., when Coroebus of Elis won the only event on the program, a race of approximately 200 yards. The Olympic Games, with an ever-widening program of events, continued until "the glory that was Greece" had faded and "the grandeur that was Rome" was tarnished, and finally were abolished by decree of Emperor Theodosius of Rome in 394 A. D. The Tailteann Games of Ireland are supposed to have antedated the first Olympic Games by some centuries, but we have no records of the specific events and winners thereof.

Professional contests of speed and strength were popular at all times and in many lands, but the widespread competition of amateur athletes in track and field

sports is a comparatively modern development. The first organized amateur athletic meet of record was sponsored by the Royal Military Academy at Woolwich, England, in 1849. Oxford and Cambridge track and field rivalry began in 1864 and the English amateur championships were established in 1866. In the United States such organizations as the New York Athletic Club and the Olympic Club of San Francisco conducted track and field meets in the 1870's, and a few colleges joined to sponsor a meet in 1874. The success of the college meet led to the formation of the Intercollegiate Association of Amateur Athletes of America and the holding of an annual set of championship games beginning in 1876.

Many athletic clubs joined the National Association of Amateur Athletes of America, formed in 1879, but dissension broke up this organization and the Amateur Athletic Union, organized in 1888, has been the ruling body in American amateur athletics since that time.

Dodgers-Reds Set Scoreless Mark

Rune Gustafsson of Sweden broke the world record for 1000 meters at Boras, Sweden, on Sept. 4, 1946. His time of 2:21.4 surpassed the old standard, made by Rudolf Harbig of Germany, by one-tenth of a second. Harbig set his record at Dresden on May 24, 1941. However, Gustafsson's mark will not be entered in the record books until it has been officially passed at a meeting of the ruling body of the sport, the International Amateur Athletic Federation.

On Sept. 11, 1946, the Brooklyn Dodgers and the Cincinnati Reds set a major league record by playing nineteen scoreless innings, the longest game without a run being scored by either team in the history of the two circuits. The contest was called on account of darkness. Vander Meer pitched fifteen innings for the Reds, and then was relieved by Gumbert. The Dodger hurlers were Gregg, who went ten innings, Casey, Herring and Behrman.

History of the Mile Run

Year	Athlete and country	Where made	Time
1865	Webster, England	England	4:44.3
1866	C. B. Lawes, England	England	4:39
1868	W. M. Chinnery, England	England	4:33.2
1871	W. M. Chinnery, England	England	4:31.8

SWIMMING

HERE IS THE ancient tale of Leander of Abydos swimming the Hellespont nightly to call on Helen of Sestos but nobody kept the time on his trips. However, Lord Byron wrote of one leg of the old Leander course, Sestos to Abydos, on May 3, 1810, in 1 hour 10 minutes. The famous British poet was a noted swimmer and once, in an endurance trial at Venice, was in the water for 10 hours 10 minutes. Distance swimming was the early type of competition. Captain Matthew Webb achieved fame by being the first to swim the English Channel—Dover to Calais—in August, 1875, in 21 hours 45 minutes. Many other swimmers, men and women, have conquered the Channel since

that time. Gertrude Ederle, of New York City, was the first woman to accomplish the feat. Miss Ederle swam the Channel Aug. 6, 1926, in 14 hours 34 minutes, breaking the existing record at that time. Since then the record has been lowered by four or five men.

Regular competition at short as well as long distances and indoor as well as outdoor came with the development of such organizations as the Amateur Athletic Union and the building of indoor and outdoor swimming pools. Swimming has been on the Olympic program since the start of the modern Olympic Games at Athens in 1896.

1932 Jesse Owens, United States	10.3s.*
With the wind.	

200-Meter Run

1900 J. W. B. Tewksbury, United States	22.2s.
1904 Archie Hahn, United States	21.6s.
1908 R. Kerr, Canada	22.4s.
1912 R. C. Craig, United States	21.7s.
1916 Allan Woodring, United States	22s.
1920 J. V. Scholz, United States	21.6s.
1924 Percy Williams, Canada	21.8s.
1928 Eddie Tolan, United States	21.2s.
1932 Jesse Owens, United States	20.7s.

400-Meter Run

1906 T. E. Burke, United States	54.2s.
1900 M. W. Long, United States	49.4s.
1904 H. L. Hillman, United States	49.2s.
1906 Paul Pilgrim, United States	53.2s.
1908 W. Halswelle, Great Britain (walkover)	50s.
1912 C. D. Reidpath, United States	48.2s.
1916 B. G. D. Rudd, South Africa	49.6s.
1920 E. H. Liddell, Great Britain	47.6s.
1924 Ray Barbuti, United States	47.8s.
1928 William Carr, United States	46.2s.
1932 Archie Williams, United States	46.5s.

800-Meter Run

1906 E. H. Flack, Great Britain	2m.11s.
1900 A. E. Tysoe, Great Britain	2m.1.4s.
1904 J. D. Lightbody, United States	1m.56s.
1906 Paul Pilgrim, United States	2m.1.2s.
1908 M. W. Sheppard, United States	1m.52.8s.
1912 J. E. Meredith, United States	1m.51.9s.
1916 A. G. Hill, Great Britain	1m.53.4s.
1920 D. G. A. Lowe, Great Britain	1m.52.4s.
1924 D. G. A. Lowe, Great Britain	1m.51.8s.
1928 Thomas Hampson, Great Britain	1m.49.8s.
1932 John Woodruff, United States	1m.52.9s.

1,500-Meter Run

1906 E. H. Flack, Great Britain	4m.33.2s.
1900 C. Bennett, Great Britain	4m.6s.
1904 J. D. Lightbody, United States	4m.5.4s.
1906 J. D. Lightbody, United States	4m.12s.
1908 M. W. Sheppard, United States	4m.3.4s.
1912 A. N. S. Jackson, Great Britain	3m.56.8s.
1916 A. G. Hill, Great Britain	4m.1.8s.
1920 Paavo Nurmi, Finland	3m.53.6s.
1924 H. E. Larva, Finland	3m.53.2s.
1928 Luigi Beccali, Italy	3m.51.2s.
1932 J. E. Lovelock, New Zealand	3m.47.8s.

5,000-Meter Run

1912 H. Kolehmainen, Finland	14m.36.6s.
1920 J. Guillemot, France	14m.55.6s.
1924 Paavo Nurmi, Finland	14m.31.2s.
1928 Willie Ritola, Finland	14m.38s.
1932 Lauri Lehtinen, Finland	14m.30s.
1936 Gunnar Hockert, Finland	14m.22.2s.

5-Mile Run

1906 H. Hawtrey, Great Britain	26m.26.2s.
1908 E. R. Voigt, Great Britain	25m.11.2s.

10,000-Meter Run

1912 H. Kolehmainen, Finland	31m.20.8s.
1920 Paavo Nurmi, Finland	31m.45.8s.
1924 Willie Ritola, Finland	30m.23.2s.
1928 Paavo Nurmi, Finland	30m.18.8s.
1932 Janusz Kusocinski, Poland	30m.11.4s.
1936 Ilmari Salminen, Finland	30m.15.4s.

Marathon

1896 S. Loues, Greece	2h.55m.20s.
1900 Teato, France	2h.59m.
1904 T. J. Hicks, United States	3h.28m.53s.
1906 W. J. Sherring, Canada	2h.51m.23.6s.
1908 John J. Hayes, United States	2h.55m.18.4s.
1912 K. K. McArthur, South Africa	2h.32m.35.8s.
1920 H. Kolehmainen, Finland	2h.32m.35.8s.
1924 A. O. Stenroos, Finland	2h.41m.22.6s.
1928 El Ouafi, France	2h.32m.57s.
1932 Juan Zabala, Argentina	2h.31m.36s.
1936 Kitei Son, Japan	2h.29m.19.2s.

110-Meter Hurdles

1896 Curtis, United States	17.6s.
1900 A. E. Kraenzlein, United States	15.4s.
1904 F. W. Schule, United States	16s.
1906 R. G. Leavitt, United States	16.2s.
1908 Forrest Smithson, United States	15s.

1932 Duncan McNaughton, Canada.....	6ft.5¾in.
1936 Cornelius Johnson, United States.....	6ft.7¾in.

Standing Broad Jump

1900 R. C. Ewry, United States.....	10ft.6 ¾in.
1904 R. C. Ewry, United States.....	11ft.4¾in.
1906 R. C. Ewry, United States.....	10ft.10in.
1908 R. C. Ewry, United States.....	10ft.11¼in.
1912 C. Tsicilitiras, Greece.....	11ft.¼in.

A first-class sprinter does sufficient work to lift himself 240 to 270 feet in the air in running 100 yards. He will bring into play approximately eight horsepower and attain his maximum speed at 60 to 70 yards from the start, when he may be traveling as fast as 24 miles an hour.—*Encyc. Brit.*

When Loues, a Greek peasant, won the first Olympic marathon, his reception was so great that women threw jewelry at his feet.—*Encyc. Brit.*

Running Broad Jump

E. H. Clark, United States.....	20ft.9 $\frac{1}{2}$ in.

SITES OF WINTER GAMES

1924—Chamonix, France	1932—Lake Placid, New York
1928—St. Moritz, Switzerland	1936—Garmisch-Partenkirchen
1948—Listed for St. Moritz	

1948 Olympic Games Dates

Dates for the 1948 Summer and Winter Olympic Games have been set. The Summer program, most of which will be held in the Wembley Stadium, London, will start July 29 and continue through Aug. 14. The Winter Games are scheduled for St. Moritz, and will run from Feb. 1 to 10.

BOXING**Flyweight**

- 1904 George V. Finnegan, United States (105-lb. class)
- 1920 Frank De Genero, United States
- 1924 Fidel La Barba, United States
- 1928 Anton Kocsis, Hungary
- 1932 Stephen Enekes, Hungary
- 1936 Willi Kaiser, Germany

Bantamweight

- 1904 O. L. Kirk, United States (115-lb. class)
- 1908 H. Thomas, Great Britain
- 1920 Walker, South Africa
- 1924 W. H. Smith, South Africa
- 1928 Vittorio Tamagnini, Italy
- 1932 Horace Gwynne, Canada
- 1936 Ulderico Sergo, Italy

Featherweight

- 1904 O. L. Kirk, United States
- 1908 R. K. Gunn, Great Britain
- 1920 Fritsch, France
- 1924 John Fields, United States
- 1928 L. Van Klaveren, Holland
- 1932 Carmelo Ambrosio Robledo, Argentina
- 1936 Oscar Casanovas, Argentina

Lightweight

- 1904 H. J. Spanger, United States
- 1908 F. Grace, Great Britain
- 1920 Samuel Mosberg, United States
- 1924 Harold Nielsen, Denmark
- 1928 Carlo Orlandi, Italy
- 1932 Lawrence Stevens, South Africa
- 1936 Imre Harangi, Hungary

CATCH-AS-CATCH-CAN**Flyweight**

- 1904 R. Curry, United States (105-lb. class)

Bantamweight

- 1904 George N. Mehnert, United States (115-lb. class)
- 1908 George N. Mehnert, United States (119-lb. class)
- 1924 Kustaa Pihlajamaki, Finland
- 1928 K. Makinen, Finland
- 1932 Robert Edward Pearce, United States
- 1936 Odon Zombory, Hungary

Featherweight

- 1896 Karl Schumann, Germany
- 1904 I. Niflot, United States
- 1908 G. S. Dole, United States
- 1920 Charles E. Ackerly, United States
- 1924 Robin Reed, United States
- 1928 Allie Morrison, United States
- 1932 Herman Pihlajamaki, Finland
- 1936 Kustaa Pihlajamaki, Finland

Lightweight

- 1904 B. J. Bradshaw, United States
- 1908 G. de Relwyskow, Great Britain
- 1920 Kalle Antilla, Finland
- 1924 Russell Vis, United States
- 1928 O. Kapp, Esthonia
- 1932 Charles Pacome, France
- 1936 Karoly Karpati, Hungary

Welterweight

- 1904 Al Young, United States
- 1920 Schneider, Canada
- 1924 J. S. Delarge, Belgium
- 1928 Edward Morgan, New Zealand
- 1932 Edward Flynn, United States
- 1936 Sten Suvio, Finland

Middleweight

- 1904 Charles Mayer, United States
- 1908 J. W. H. T. Douglas, Great Britain
- 1920 H. W. Mallin, Great Britain
- 1924 H. W. Mallin, Great Britain
- 1928 Piero Toscani, Italy
- 1932 Carmen Barth, United States
- 1936 Jean Despeaux, France

Light Heavyweight

- 1920 Edward Eagan, United States
- 1924 H. J. Mitchell, Great Britain
- 1928 Victoria Avendano, Argentina
- 1932 David E. Carstens, South Africa
- 1936 Roger Michelot, France

Heavyweight

- 1904 Sam Berger, United States
- 1908 A. L. Oldham, Great Britain
- 1920 Rawson, Great Britain
- 1924 Otto Von Porath, Norway
- 1928 A. Rodriguez Jurado, Argentina
- 1932 Santiago A. Lovell, Argentina
- 1936 Herbert Runge, Germany

WRESTLING**Welterweight**

- 1904 O. F. Roehm, United States
- 1924 Hermann Gehri, Switzerland
- 1928 A. J. Haavisto, Finland
- 1932 Jack F. Van Bebber, United States
- 1936 Frank Lewis, United States

Middleweight

- 1904 Charles Erickson, United States
- 1908 S. V. Bacon, Great Britain
- 1920 E. Leino, Finland
- 1924 Fritz Haggmann, Switzerland
- 1928 E. Kyburg, Switzerland
- 1932 Ivar Johansson, Sweden
- 1936 Emile Poilve, France

Light Heavyweight

- 1920 Anders Larsson, Sweden
- 1924 John Spellman, United States
- 1928 T. S. Sjostedt, Sweden
- 1932 Peter Joseph Mehringer, United States
- 1936 Knut Fridell, Sweden

Heavyweight

- 1904 B. Hansen, United States
- 1908 G. C. O'Kelly, Great Britain
- 1920 Roth, Switzerland
- 1924 Harry Steele, United States
- 1928 Johan C. Richthoff, Sweden
- 1932 Johan C. Richthoff, Sweden
- 1936 Kristjan Palusalu, Esthonia

The Story of the Olympic Games

THE first Olympic Games of which there is record occurred in 776 B. C. and consisted of one event, a great foot race of about 200 yards held on a plain by the River Alpheus (now the Ruphia) just outside the little town of Olympia in Greece. It was from that date that the Greeks began to keep their calendar by "Olympiads," the four-year spans between the celebrations of the famous games. There was a religious as well as an athletic significance to the ancient games and the shrines, temples and sacred fires within the Olympic enclosure were the scenes of worship all through the year whereas the Olympic Games, at the height of their popularity, never lasted more than five days and were held only once every four years.

The competition was entirely amateur at the start and the only prizes were laurel wreaths. Only free Greek citizens were allowed to compete and they had to undergo a strict training course that lasted ten months. But civic rivalry led to trickery and professionalism and the

games became degraded after some centuries. When Rome conquered Greece, the Roman emperors turned the Olympic Games from patriotic, religious and athletic festivals into carnivals and circuses. They dragged on malodorously until they were finally halted by decree of Emperor Theodosius I of Rome in 394 A. D.

The modern Olympic Games, which started in Athens in 1896, are the result of the devotion of a French educator, Baron Pierre de Coubertin, to the idea that, since boys and athletics have gone together down the ages, education and athletics might well go hand-in-hand toward a better international understanding. He planned a revival of the ancient Olympic Games on a world-wide basis and succeeded in getting nine nations to send athletes to the first of the modern games in 1896. Since then more than 5,000 athletes representing 53 nations have competed in the games.

Interrupted for the second time by war, the modern Olympic Games will be resumed at London in 1948.

CYCLING

THE ORIGIN and early history of the sport of cycling probably should be sought in the law volumes that contain the court records of decisions in patent cases. There is much dispute and litigation over the priority of inventions and improvements in the development of the bicycle. The fundamental idea of a wheeled frame on which a man could stand or sit and propel himself along a road goes back as far as the time of the Ptolemies in Egypt, but nothing progressive was done about it until a Frenchman named de Sivrac, in 1690, invented a tricycle on which he sat and rolled along by pushing his feet against the ground. There were various two-wheeled and three-wheeled improvements developed by French, German and English experimenters in the next century or so. The frames were better; steering with the front wheel was a new feature; handlebars were a more convenient design and adjustable seats were added. But the rider still pushed himself along with his feet until, about 1800, somebody had the bright idea of equipping the front wheel with a geared device, the rider furnishing the power by

pushing and pulling handlebars mounted on a spindle. Pedals came along about 1840 and, in the case of bicycles, were attached to the front wheel that grew to be much larger than the rear wheel. Solid rubber tires replaced iron tires in 1868.

There was a long legal dispute about credit for the invention of the "safety bicycle" with two wheels of equal size and pedals attached to a sprocket that, through gears and a chain, applied power to the rear wheel but, in any case, the "safety" or modern bicycle had just about driven the old "high-wheeler" off the roads by 1890. Pneumatic tires were invented in 1888 by J. B. Dunlop, a Scotsman who was a practising veterinarian in Belfast, Ireland, and in a few years all the better bicycles were using pneumatic tires. But when Dunlop tried to patent his invention, it was discovered that a stranger named R. W. Thomson had taken out an English patent on such an idea in 1845. The Pickwick Bicycle Club, founded in London, 1870, was the first bicycle organization. The League of American Wheelmen was organized in 1880.

International and National Skeet Champions

Sub gauge and professional events were not fired because of lack of shells.

MEN

Champion of champions—Charles Poulton, San Antonio, Texas, 100x100.

All gauge—Alex Kerr, Beverly Hills, Calif., 250x250.

Twenty gauge—D. Lee Braun, Austin, Texas, 100x100.

Small gauge—D. Lee Braun, 96x100.

High Over-all—Gerald Batten, Chicago, 347x350 (shoot-off, 100x100).

2-man team—Charles Poulton and D. Lee Braun, 494x500.

5-man team—Capitol City Gun Club (Dave Arnette, George Heaney, Dick Hecker, Loren Booker, L. S. Pratt), Indianapolis, 1210x1250.

Junior (under 17)—Joe Devers, Dayton, Ohio, 98x100.

Sub-junior (under 13)—John Ragsdale, Jr., Mooresville, Ind., 46x100.

Father and son—M. O. Devers and Joe Devers, Dayton, Ohio, 483x500.

WOMEN

All gauge—Mrs. J. A. Lafore, Haverford, Pa., 235x250.

Twenty gauge—Mrs. J. A. Lafore, 91x100.

Small gauge—Mrs. M. L. Smythe, Palm Beach, Fla., 88x100.

High Over-all—Mrs. J. A. Lafore, 326x350.

CROQUET

More than 50,000 spectators, the largest crowd in the history of golf, attended the final day's play of the annual All-American professional championship at the Tam O'Shanter Country Club, Chicago, last year. First prize of \$10,500 went to Herman Baron of the Fenway Country Club, White Plains, N. Y., who finished with a score of 280.

The world croquet championship was held at Roehampton, England, in 1946. D. J. V. Hamilton-Miller, London schoolmaster, capturing the title after an extended 8 hour and 10 minute match with Dr. H. J. Penny of Australia. The marathon performance was witnessed by 27 (sic) spectators.

LAWN TENNIS

LAWN TENNIS is a comparatively modern modification of the ancient game of court tennis. Major Walter Clopton Wingfield thought that something like court tennis might be played outdoors on lawns and in December, 1873, at Nantclwyd, Wales, introduced his new game under the name of "Sphairistike" at a lawn party. The game was a success and spread rapidly, but the name was a total failure and soon immediately disappeared when all players and spectators began to refer to the new game as "lawn tennis". In the early part of 1874 a young lady named Mary Ewing Outerbridge returned from Bermuda to New York, bringing with her implements and necessary equipment for the new game that she had obtained from a British Army supply store in Bermuda. Miss Outerbridge and friends played the first game of lawn tennis in the United States on the grounds of the Staten Island

Cricket and Baseball Club in the spring of 1874.

For a few years the new game went along in haphazard fashion under varying rules. Tennis balls were of no standard size or texture. The nets were set at different heights up to 5 feet on the side and 4 feet in the middle. Some courts were marked out in hour-glass shape, narrow in the middle and wide at both ends. But about 1880 standard measurements for the court and standard equipment within definite limits became the rule. In 1881 the United States Lawn Tennis Association was formed and conducted the first national championship at Newport, R. I. The international matches for the Davis Cup began with a series between the British and United States players on the courts of the Longwood Cricket Club, Chestnut Hill, Mass., in 1900, with the home players winning.

The first lawn tennis tournament in the United States, a handicap event, was played at Nahant, Mass., in August 1876. Mr. James Dwight, called "The Father of American Lawn Tennis," won the tourney.

The first official championships of the United States, played under English rules and with English balls, were held at the Casino, Newport, R. I., in August 1881. There were 25 competitors in the singles and 13 pairs in the doubles. The singles was won by Richard D. Sears of Boston, who held the title every year until 1888.

The first Davis Cup contest was played between the United States and the British Isles at the Longwood Cricket Club, Chestnut Hill, Mass., in 1900. The United States won, three matches to none. The Cup was donated by Dwight F. Davis, then a Harvard undergraduate, for international competition.—*Encyc. Brit.*

The first professional lawn tennis match in America was played between Thomas Pettit and George Kerr, British professional, at the Newport (R. I.) Casino on Aug. 29, 1889. Kerr won the contest.

GOLF

IT MAY BE that golf originated in Holland—historians believe it did—but certainly Scotland fostered the game and is famous for it. In fact, in 1457 the Scottish Parliament, disturbed because football and golf had lured young Scots from the more soldierly exercise of archery, passed an ordinance that “futeball and golf be utterly cryit down and nocht usit”. James I and Charles I of the royal line of Stuarts were golf enthusiasts, whereby the game came to be known as “the royal and ancient game of golf”.

The golf balls used in the early games were leather covered and stuffed with feathers. Clubs of all kinds were fashioned by hand to suit individual players. The great step in spreading the game came with the change from the feather ball to the gutta-percha ball about 1850, and in 1860 formal competition began with the establishment of an annual tournament for the British open championship. There are records of “golf clubs” in the United

States as far back as colonial days but no proof of actual play before John Reid and some friends laid out six holes on the Reid lawn in Yonkers, N. Y., in 1888 and played there with the golf balls and clubs brought over from Scotland by Robert Lockhart. This group then formed the St. Andrews Golf Club of Yonkers, and golf was established in this country.

However, it remained a rather sedate and almost aristocratic pastime until a 20-year-old ex-caddy, Francis Ouimet of Boston, defeated two great British professionals, Harry Vardon and Ted Ray, in the United States Open championship at Brookline, Mass., in 1913. This feat put the game and Francis Ouimet on the front pages of the newspapers and stirred a wave of enthusiasm for the sport. The greatest feat so far in golf history was that of Robert Tyre Jones, Jr. of Atlanta, Ga., in winning the British Open, the British Amateur, the U. S. Open and the U. S. Amateur titles in one year, 1930.

(a) Won play-off. *In 1892 competition was extended to 72 holes.

Snead 8th American to Take British Open

Eight Americans, including Sam Snead, victor in 1946, have won the British Open golf championship. The list is headed by Walter Hagen, who triumphed in 1922, 1924, 1928 and 1929. Bobby Jones finished first in 1926, 1927 and 1930, the year he

scored his famous "grand slam." Other American winners were Jock Hutchinson, Sr., 1921; Jim Barnes, 1925; Tommy Armour, 1931; Gene Sarazen, 1932, and Denny Shute, 1933. Hutchinson and Armour won the title after moving to the United States.

1894-97	Jackson W. Showalter, Georgetown, Ky.
1897-1906	Harry Nelson Pillsbury, Boston, Mass.
1906-09	Jackson W. Showalter, Georgetown, Ky.
1909-36	Frank J. Marshall, New York
1936-44	Samuel Reshevsky, New York†
1944-46	Arnold S. Denker, New York
1946	Samuel Reshevsky, Boston

*Retired after winning return match with Showalter. †In 1942, Isaac I. Kashdan of New York was co-champion for a while because of a tie with Reshevsky in that year's tournament. Reshevsky won the play-off.

Ted Allen of Boulder, Col., won the world horseshoe pitching championship in

1946 with 22 victories and one defeat. The event was held at Des Moines.

HORSE RACING

IENT DRAWINGS on stone and bone
e that horse racing is at least 3000
s old, but Thoroughbred Racing is a
ern development. Practically every
oroughbred in training today traces its
stered ancestry back to one or more of
e sires that arrived in England about
s from the Near East and became
wn, from the names of their owners,
the Byerly Turk, the Darley Arabian
the Godolphin Arabian. The Jockey
b (English) was founded at Newmarket
1750 or 1751 and became the custodian
the Stud Book as well as the court of
resort in deciding turf affairs.

There was horse racing in this country
ore the Revolution, but the great lift
the breeding industry came with the
portation in 1798, by Col. John Hoomes
Virginia, of Diomed, winner of the
om Derby of 1780. Diomed's lineal
endants included such famous stars of
American turf as American Eclipse and
ington. From 1800 to the time of the
il War there were race courses and
eding establishments plentifully scat-
ed through Virginia, North Carolina,
ath Carolina, Tennessee, Kentucky and

Louisiana. In fact, thoroughbred racing
was largely a Southern sport and that was
one reason why the Confederacy had such
excellent cavalry in the Civil War. A cen-
tury ago crack horses were matched in
four-mile races that were run in heats,
best two out of three!

The oldest stake event in North America
is the King's Plate, a Canadian fixture that
was first run in the Province of Quebec in
1836. The oldest stake event in the
United States is The Travers, which was
first run at Saratoga in 1864. The gam-
bling that goes with horse racing and
trickery by jockeys, trainers, owners and
track officials caused attacks on the sport
by reformers and a demand among horse
racing enthusiasts for an honest and effec-
tive control of some kind, but nothing of
lasting value to racing came of this until
the formation of The Jockey Club in 1894.
The Jockey Club, composed of fifty mem-
bers chosen from the aristocracy of the
turf, was all-powerful in racing regula-
tion until the State Racing Commissions
came into being as a result of mutuel bet-
ting and the great revenues that came with
the tax on the "daily handle".

Outstanding Riding Performances

Among the winners of the entire card of six races at Churchill Downs, June 5, 1910, James Lee, the colored jockey, established a world's record. This mark stood until Albert Whittaker rode all seven winners at Huntley, New Zealand, February 1910. Thomas rode all seven winners at

Townsville, Australia, July 29, 1929. In this country, H. Phillips duplicated Lee's feat at Reno, July 5, 1916. At Marlboro, September 11, 1930, Albert Adams had six mounts and won with all. At Ravenna Park (Ohio), October 18, 1930, J. Sylvester rode in all eight races on the program and earned brackets in seven.

FUTURITY STAKES

Belmont Park; 2-year-olds; 6½ furlongs

Distance 1,263 yards 1 foot from 1892 to 1901, inclusive. Distance ¾ mile prior to 1892 and from 1902 to 1924 inclusive; about 7/8 mile from 1925 to 1933, inclusive. Run at Sheepshead Bay until 1910. Run at Saratoga by special arrangement in 1910, 1913 and 1914.

Origin of Individual Racing Silks

The practice of using individual racing silks to distinguish horses is almost 200 years old. They were first introduced in October, 1762, at Newmarket, England, when a group of sportsmen conceived the unique idea. In the quaint phraseology of the time, "for the greater convenience of distinguishing horses in the running, as also for the prevention of disputes arising

from not knowing the colours worn by riders, seventeen gentlemen came to the decision to register their colours," and the stewards of the Newmarket meeting "hoped" in the name of the Jockey Club that the gentlemen "would take care that their riders be provided with dresses accordingly." Lord Grosvenor, the Lord Derby of that day, chose orange as his color.

THE JOCKEY CLUB

Though its original charter was dated Feb. 8, 1894, The Jockey Club, parent body of the American turf, might well be considered as having completed its fifty-fifth year of service to thoroughbred racing in 1946 because the Board of Control, forerunner of The Jockey Club, was organized in 1891. Membership is limited to fifty, with The Earl of Derby the only honorary member.

OFFICERS

WILLIAM WOODWARD, *Chairman*; A. H. MORRIS, *Vice-chairman*;
JOSEPH E. DAVIS, *Secretary and Treasurer*

STEWARDS

S. VON STADE

Assault, Stymlie, Among Money-winning Leaders

Robert J. Kleberg, Jr.'s Assault and Mrs. Ethel D. Jacobs' Stymlie made important strides in thoroughbred money-winning ranks in 1946 by capturing enough of the rich purses offered to advance threateningly on Whirlaway's all-time record of \$561,161. Assault, 3-year-old champion, became the first horse to earn more than \$400,000 in a single season, his triumph in the Westchester Handicap increasing his

1946 total to \$424,195. En route he smashed Gallant Fox's single season mark of \$306,275, made in 1930. Assault's all-time earnings now stand at \$441,445, placing him third on the list behind Whirlaway and Stymlie.

Stymlie's triumph in Jamaica's Gallant Fox Handicap netted \$41,200 and increased his earnings to \$516,285, enough to make him a close runner-up to Whirlaway.

"Triple Crown" Winners

men Assault won the Kentucky Derby, Preakness, and Belmont Stakes in 1946, he
me the seventh thoroughbred to join the select group which have captured the
e events for three-year-olds that make up the mythical "Triple Crown" in the United
ES.

England also has its "Triple Crown," consisting of the Epsom Derby, St. Leger Stakes,
Two Thousand Guineas. Fourteen horses have taken all three classics.
Following are the "Triple Crown" winners in both countries:

UNITED STATES

Horse	Owner	Year	Horse	Owner
Sir Barton	J. K. L. Ross	1941	Whirlaway	Warren Wright
War Admiral	Samuel D. Riddle	1943	Count Fleet	Mrs. John Hertz
Gallant Fox	William Woodward	1946	Assault	Robert J. Kleberg, Jr.
Omaha	William Woodward			

ENGLAND

West Australian	Mr. Bowes	1899	Flying Fox	Duke of Westminster
Gladiator	Count F. deLagrange	1900	Diamond Jubilee	Prince of Wales
Lord Lyon	R. Sutton	1903	Rock Sand	Sir J. Miller
Ormonde	Duke of Westminster	1915	Pommern	S. Joel
Common*	Sir F. Johnstone	1917	Gay Crusader	Mr. Fairie
Isinglass	H. McCalmont	1918	Gainsborough	Lady Jas. Douglas
Galtee More	J. Gubbins	1935	Bahram	Aga Khan

ced in name of Lord Alington in Two Thousand Guineas.

Bernborough's Racing Career Ends

Bernborough, ranked as Australia's greatest race horse since Phar Lap, was forced into retirement after winning 15 races in succession in 1946 when he broke a sesamoid bone (a protuberant mass of cartilage in a tendon) of his near foreleg in the MacKinnon Stakes at Flemington. The MacKinnon was Bernborough's first race since the champion's winning streak was broken before a crowd of 107,000 in the Caulfield Stakes on Oct. 19. The 7-year-old, carrying 150 pounds, finished fifth in the mile-and-a-half Caulfield.

 Epsom Oaks (E)—Sir Alfred Butt's Steady Aim
 Grand Prix de Paris (F)—F. R. Schmitt's Souverain
 Prix de Diane (F)—Marcel le Baron's Pirette

TRA Organizes the TRPB

In January 1946 the Thoroughbred Racing Associations of the United States took steps to run down a minority element which threatened the sport of horse racing. It set up an investigating organization called the Thoroughbred Racing Protective Bureau and installed Spencer J. Drayton, former administrative assistant to Director J. Edgar Hoover of the FBI, as its head. It has been estimated that the TRPB will cost the race tracks comprising the TRA over half a million dollars annually.

Leading All-time Money-winning Thoroughbreds

This tabulation includes racing through Nov. 9, 1946.

Horse	Owner	Amount	Starts	1st	2d	3d
Flawless	Calumet Farm	\$561,161	60	32	15	9

 Year-Old Colt—Assault.
 Year-Old Filly—Bridal Flower.
 Year-Old Colt—Double Jay.
 Year-Old Filly—First Flight.
 Saddle-chaser—Elkridge.

Feller's Speed Measured at 98.6 m.p.h.

The question of how fast Bobby Feller throws a ball was settled before a night game between the Cleveland Indians and the Senators in Washington on Aug. 20. An Army measuring device caught one of Feller's pitches traveling at a speed of 145 feet per second, or 98.6 miles per hour, better than the previous record of 139 feet per second, or 94.7 miles per hour, set by Atley Aldrich, former New York Yankee pitcher. An Army testing machine measured the speed of the pitch, from the mound to the plate, to within 1/10,000 of a second.

Official American League Attendance Figures

Source: American League Service Bureau.

Club	1946 attendance	1945 attendance	Increase
*New York	2,265,512	881,845	1,383,667
Detroit	1,722,590	1,280,341	442,249
Boston	1,416,944	603,794	813,150
Cleveland	1,057,289	558,182	499,107

Chicago	983,403	657,981	325,422
Philadelphia	621,793	462,631	159,162
St. Louis	526,435	482,986	43,449

*New major league record.

The National League does not release attendance figures.

Stan Musial of the St. Louis Cardinals and Ted Williams of the Boston Red Sox climaxed banner regular-season performances in 1946 by being voted the most valuable players in their respective circuits in the annual poll conducted by the Baseball Writers' Association of America.

BRIDGE

Bridge championships are determined by tournaments conducted twice a year by the American Contract Bridge League, and called the "Summer Nationals" and the "Winter Nationals." In addition the annual Team-of-Four Tournament for the Harold S. Vanderbilt Trophy is generally considered by bridge players to be of championship stature.

There is some duplication between the summer and winter contests, but in general the summer tournaments, in which many of the events are limited to master class players, are considered the title tournaments.

The 1946 winners in each category follow:

Men's Pairs (summer)—Sidney Silodor and Charles J. Solomon, Philadelphia.

Women's Pairs (summer)—Waldemar von Redwitz and A. M. Barnes, New York.

Men's Pairs (summer)—Mrs. R. C. Young, Philadelphia, and Mrs. E. J. Seligman, New York.

Men's Team of Four (summer)—Wil-

liam Christian, Montgomery, Ala.; Mark Hodges, Dallas, Tex.; Sol Mogal, New York; Mrs. Wilkinson Wagar, Atlanta, Ga.

Individual Masters (invitation)—Robert McPherran, New York.

Harold S. Vanderbilt Trophy—Oswald Jacoby, Sam Stayman, Howard Schencken and George Rapee, New York.

The designation "master" is conferred by the bridge league in conformity with a master point plan. All tournaments, major or minor, conducted by the league carry with them master point awards, the number of master points being determined by the importance of the tournament. Winners, runners-up, and in important tournaments all who finish high in the standing, win points—an ordinary tournament confers five points to the winners. A player who has amassed from one to nine points is called a junior master; 10 to 29 a master (and can play in all master events except the pair tournament); 30 to 49 a national master (and can play in all events); 50 to 299 a senior master; 300 and over a life master.

HARNESS RACING

OLIVER WENDELL HOLMES, the famous Autocrat of the Breakfast Table, wrote that the running horse was a gambling toy but the trotting horse was useful and, furthermore, "horse-racing is not a republican institution; horse-trotting is." Oliver Wendell Holmes was a born and bred New Englander and New England was the nursery of the harness racing sport in America. Pacers and trotters were matters of local pride and prejudice in Colonial New England and, shortly after the Revolution, the Messenger and Justin Morgan strains produced many winners in harness racing "matches" along the turnpikes of New York, Connecticut, Rhode Island, Massachusetts, Vermont and New Hampshire.

There was English thoroughbred blood in Messenger and Justin Morgan and, many years later, it was blended in Rysdyk's

Hambletonian, foaled in 1849. Hambletonian was not particularly fast under harness but his descendants have had almost a monopoly of prizes, titles and records in the harness racing game. Hambletonian was purchased as a foal with its dam for a total of \$124 by William Rysdyk of Goshen, N. Y. and made a modest fortune for the purchaser.

Trotters and pacers often were raced under saddle in the old days and, in fact, the custom still survives in some places in Europe. Dexter, the great trotter that lowered the mile record from 2:19 $\frac{3}{4}$ to 2:17 $\frac{1}{4}$ in 1867, was said to handle just as well under saddle as when pulling a sulky. But as sulkies were lightened in weight and improved in design, trotting under saddle became less common and finally faded out in this country.

Trotting, Pacing Records Made at Santa Anita Meeting

Three world harness racing records were made within two weeks during the 1946 Grand Circuit meeting at Santa Anita Park, Arcadia, Calif. The first mark went to War Glory, which lowered the mile-and-a-quarter trotting record to 2:35. Five days later, May 11, Kaola shattered this record

by three seconds in winning the \$50,000 Western Harness Grand Trot. On May 18, Blue Again won the \$50,000 Western Harness Grand Pace, another mile-and-a-quarter race, in 2:32 $\frac{1}{2}$, a full second under the previous mark. Blue Again is by Scotland and Kaola is by Volomite.

WORLD HARNESS RACING RECORDS

This compilation recognizes as champions those horses which have made the fastest time at their gait, age, and hitch, either against time or in a race at one mile.)

Patty Berg defeated Betty Jameson in the final of the first women's national open championship, held at Spokane, Wash., last year. The \$5600 purse was the richest ever offered in women's golf.

THE GAME OF CURLING is supposed to be of Dutch origin but it dates back to 1607 in Scotland and grew to be the national sport of that country. The action is something like bowling on ice and, for that matter, it is alleged to be an offshoot of lawn bowling. Circular stones (weight about 35 pounds in the United States, top limit 44 pounds in Great Britain) are sent sliding up and down the rinks toward targets called "tees" at either end. Each player uses two stones and a side or team consists of four players, one of whom is captain or "skip".

Attempts to Swim Channel Fail

In 1946 two attempts were made to swim the English Channel. The first, by Jorge Berroeta of Chile, came within a half mile of being successful. Berroeta was in the water for more than twenty hours before surrendering off the beach of Dover. Miss Elna Anderson of Denmark gave up after three hours and one minute. Georges Michel of Paris holds the record of eleven hours and five minutes, set in 1926. He swam from Cape Gris Nez, France, to St. Margaret's Bay, Dover.

with the formation of the Grand Caledonian Curling Club in Scotland on Nov. 15, 1838. The title of the club was changed to "Royal" Caledonian Curling Club when Queen Victoria, with Albert, the Prince Consort, visited Scotland in 1842 and Prince Albert became a patron of the club. Scots who emigrated to Canada and the United States carried their love of the game with them and spread the enthusiasm to such an extent that, where climate permits, curling matches and "bonspiels" have become popular fixtures on the winter sports programs of the northern States and Canada.

BASKETBALL

BASKETBALL may be unique in sports. It is one game concerning which it is safe to state when, where and how it originated. In the winter of 1891-92, Dr. James Naismith, an instructor in the Y.M.C.A. Training College (now Springfield College) at Springfield, Mass., deliberately invented the game of basketball in order to provide indoor exercise and competition for the students between the closing of the football season and the opening of the baseball season. He affixed peach baskets overhead on the walls at opposite ends of the gymnasium and, with an association (soccer) football, organized teams to play his new game in which the purpose was to toss the ball into one basket and prevent, as far as possible, the opponents from tossing the ball into the other basket. Fun-

damentally, the game is the same today, though there have been some improvements in equipment and many changes in the rules.

Because Dr. Naismith had eighteen available players when he invented the game, the first rule was: "There shall be nine players on each side." Later the number of players became optional, depending upon the size of the available court, but the five-player standard was adopted when the game spread over the country. United States soldiers introduced the game in Europe in World War I and, being taken up by foreign nations, it soon became a world-wide sport. An odd point is that, though it is still chiefly an indoor game in the United States, in other countries it flourishes almost entirely outdoors.

ICE HOCKEY

HOCKEY, by birth and upbringing a Canadian game, is an offshoot of field hockey. Some historians state that the first hockey game was played in Montreal in December, 1879, between two teams composed almost exclusively of McGill University students, but others assert that Kingston, Ont., or Halifax, N. S., were the scenes of earlier hockey games. In the Montreal game of 1879 there were fifteen players on a side and they used an assortment of crude sticks to keep the puck in motion. Early rules allowed nine men on a side but the number was reduced to seven in 1886 and finally reduced to six, the standard of today.

The first governing body of the sport was the Amateur Hockey Association of Canada, organized in 1887. In the winter of 1894-95 a group of college students from the United States visited Canada, saw hockey played, became enthused over the game and introduced it as a winter sport when they returned home. This was the

start of hockey in the United States. The first professional league was the International Hockey League that operated, strangely enough, not in Canada but in northern Michigan in 1904-06 and included as players such famous stars as Cyclone Taylor and Hod and Bruce Stuart, later included in the Hockey Hall of Fame.

Until 1910, professionals and amateurs were allowed to play together on "mixed teams", but this arrangement ended with the formation of the first "big league", the National Hockey Association, in eastern Canada in 1910. The Pacific Coast League, to provide professional hockey in the West, was organized in 1911 with Seattle (and later other American cities) included in the circuit. The National Hockey League replaced the National Hockey Association in 1917. Boston, in 1924, was the first American city to join that circuit. The Stanley Cup, top trophy of hockey, was competed for by "mixed teams" from 1894 to 1910, thereafter by professionals.

Hockey Puck Travels 88 m.p.h.

A hockey puck travels at an average speed of 88 miles per hour, according to a series of tests made with an oscilloscope by Dr. Dana Warren, Omaha University physics professor. Dr. Warren put one set of photoelectric cells in front of the blue line and another across the net, 55 feet away. Then George Homenuke of the Omaha Knights kept shooting until the average was reached.

Kiefer Turns Professional

Adolph Kiefer, holder of every world backstroke record, turned professional in 1946. Kiefer won approximately 2,000 races and was beaten only twice during his twelve years as an amateur.

New York Rovers	1	10	1	3	23 54

*Declared winner on basis of total goals scored.

Hec (Toe) Blake, captain of the Montreal Canadiens, National Hockey League and Stanley Cup champions in 1946, has made many goals during his career, but probably none were more important than two points he scored during the 1945-46 season. The first, made against the Toronto Maple Leafs, tied up the game and gave the Canadiens the league title. The second, with Boston's Bruins the victims, snapped a 3-3 deadlock in the final game of the Stanley Cup play-offs and won the famous trophy for the Canadiens.

Kyriakides, Cote Marathon Victors

A Greek, Stylianos Kyriakides, and a Canadian, Gerard Cote, won the two outstanding distance races in the United States in 1946, the Boston and the National A. A. U. marathons. Kyriakides, who hails from Athens, won the Boston event in 2:29:27, while Cote, from St. Hyacinthe, Quebec, was timed in 2:47:53.6. It was Cote's third triumph in the national contest, a record shared with the late Pat Dengis. Cote's previous victories were scored in 1940 and 1943.

POLO

Polo originated "somewhere east of Suez" but exactly where never has been determined. There is pictorial proof that it was played many centuries ago in Persia, Japan, China and Tibet, but it reached England by way of a border tribe in India known as the Manipuri. British army officers in India, about 1860, found the Manipuri playing polo and learned the game from them. The fact that the Manipuri used small native horses—they had no others—was the reason for the early height limit (14 hands) on polo mounts, from which arose the custom of calling them "polo ponies," which was abandoned in 1919.

In 1869 some officers of the 10th Hussars, returning from India, introduced the game in England and informal games were played with as many as eight players on a side. Formal competition at Hurlingham, the great shrine of the game, began in 1876 with five players on a side, which

number was cut to four in 1882. In 1884 an outstanding English player by the name of John Watson invented the backhand stroke and much improved the tactics of the game.

James Gordon Bennett, Jr., noted American newspaper owner and editor, saw polo at Hurlingham in 1875, brought the implements to this country, had a carload of cow ponies sent up from Texas and promoted a game that was played indoors at the Dickel Riding Academy at Fifth Avenue and 39th Street, New York City, in 1876. Polo moved outdoors to the Jerome Park race course and other suitable places soon after. One field on which it was played, at Fifth Avenue and 110th Street, was taken over by the New York baseball team in the National League and that is why the field on which the "Giants" play ball, although there since have been two changes in site, still is called "the Polo Grounds."

International Polo Series, 1946

International polo was resumed in the United States for the first time since 1939. A Mexican quartet consisting of four brothers and sponsored by President Manuel Avila Camacho, provided the opposition. The United States team won the two-game series, 10 to 4 and 11 to 4. Both con-

tests were played on the turf of the famed International Field of the Meadow Brook Club, Westbury, Long Island.

In 1941 the U. S. scored a three-game sweep over the Mexicans at Mexico City.

The line-ups for the 1946 games:

First Game

UNITED STATES (10)	MEXICO (4)
1—M. G. Phipps	1—Gabriel Gracida
2—Cecil Smith	2—Guillermo Gracida
3—S. B. Iglehart	3—Alejandro Gracida
Back—Peter Perkins	Back—Jose Gracida

Umpires—W. H. Gaylord and W. F. C. Guest. Referee—Ramos Cesneros. Time of periods—7½ minutes.

ROWING

Rowing goes back so far in history that there is no possibility of tracing it to any particular aboriginal source. The oldest rowing race still on the calendar is the "Coxett's Coat and Badge" contest among professional watermen of the Thames (England) that began in 1715. The first Oxford-Cambridge race was held at Henley in 1829. Competitive rowing in the United States began with matches between boats crewed by professional oarsmen of the New York water front. They were oarsmen who used the small boats that plied as ferries from Manhattan Island to Brooklyn and return, or who rowed salesmen down the harbor to meet ships arriving from Europe. Since the first salesman to meet an incoming ship had some advantage over his rivals, there was keen competition in the bidding for fast boats and the best oarsmen. This gave rise to match races for a purse or a side bet on many occasions. The first of such races was held in June, 1851, in four-oared gigs.

Amateur boat clubs sprang up in the United States between 1820 and 1830 and seven students of Yale joined together to purchase a four-oared lap-streak gig in 1843. The first Harvard-Yale race was held Aug. 3, 1852, on Lake Winnepesaukee, N. H. The first time an American college crew went abroad was in 1869 when Harvard challenged Oxford and was defeated on the Thames. There were early college rowing races on Lake Quinsigamond, near Worcester, Mass., and on Saratoga Lake, N. Y., but the Intercollegiate Rowing Association, in 1895, settled on the Hudson, at Poughkeepsie, as the setting for the annual "Poughkeepsie Regatta". The National Association of Amateur Oarsmen, organized in 1872, has conducted annual championship regattas since that time. The first rowing races were held with lap-streak gigs but shells came into general favor about a century ago. The outrigger was invented in 1830 by Clasper, an Englishman. Yale used the sliding seat in 1870.

Rowing Statistics

Yale-Harvard Varsity Race Record

Rowed at Centre Harbor, N. H., in 1852; Springfield, Mass., in 1855, 1872-73, 1876-77; Worcester, Mass., 1859-1870; Saratoga Lake, N. Y., 1874-75; New London, Conn., 1878 to 1895, 1898 to 1916, and 1919 to 1941; Poughkeepsie, N. Y., in 1897; Derby, Conn., in 1918, 1942; and Cambridge, Mass., in 1946. Course was 2 miles in 1852; 3 miles from 1855 to 1875, and 4 miles thereafter.

Seventh-place finishers: 1925, Columbia; 1926, Wisconsin; 1927, Pennsylvania; 1928, Pennsylvania; 1930, Pennsylvania; 1931, Columbia; 1932, Pennsylvania; 1934, Columbia; 1935, Columbia; 1936, Syracuse; 1937, Wisconsin; 1938, Syracuse; 1939, Columbia; 1940, Wisconsin; 1941, Rutgers.

Eighth-place finishers: 1926, Cornell; 1930, Wisconsin; 1931, Wisconsin; 1932, M. I. T.; 1940, Princeton; 1941, M. I. T.

Ninth-place finishers: 1931, M. I. T.; 1941, Columbia.

*Record for three miles. †Record for four miles.

The Harvard varsity crew's victory over Yale on the Charles River, Cambridge, Mass., last June, was the eighth in succession for the Crimson over the Blue. Harvard's winning streak over the Elis, interrupted by the war from 1943-45, is the longest on record between the old rivals.

A crowd estimated at 500,000 saw the Oxford crew defeat Cambridge last March in their first meeting over the traditional Thames River course, London, since 1939. Oxford had a three-length lead at the end of the four-mile event, which was having its ninety-second renewal. Cambridge won the classic in 1939.

YACHTING

... sailed in search of the Golden
... Cleopatra (according to Shake-
...) had a royal barge with purple
... Columbus had three sailing ships
... he crossed the Atlantic westward
... 92. But who the first sailor was and
... he launched his primitive craft no-
... ever will know. The word "yacht" is
... ech origin and the first "yacht race"
... record in the English language was a
... ag contest from Greenwich to Graves-
... and return in 1662 between a Dutch
... t and an English yacht designed and,
... me part of the race, sailed by Charles
... England. The royal yacht won the
... est.

... the first yacht club was organized at
... , Ireland, in 1720 under the name
... the Cork Harbour Water Club, later
... ged to the Royal Cork Yacht Club.
... Royal Yacht Squadron was organized

at Cowes in 1812 and the name changed to
the Royal Yacht Club in 1820. The New
York Yacht Club was organized aboard
the Stevens schooner "Gimcrack" on July
30, 1844, and a clubhouse erected at Ely-
sian Fields, Hoboken, N. J., the following
year.

From that time until the Civil War
races were held over courses starting from
the water off the yacht club promontory.
One course was to the Sandy Hook Light-
ship and return.

In 1850 the celebrated "America" was
built by a group of New York yachtsmen
and sent abroad to compete at Cowes. In
a race around the Isle of Wight, with a
special cup as a prize, the "America" de-
feated fourteen English boats and brought
back the trophy that has been raced for
as "the America's Cup" in many interna-
tional yacht races since that time.

LACROSSE

North-South Series

The annual North-South intercollegiate lacrosse game at Baltimore was resumed in 1946 and ended in a 14-14 tie. Results of previous games follow:

1940—North 6, South 5

1941—South 7, North 6

1942—North 6, South 3

1943—South 9, North 5

THE 1946 LINE-UPS

North—Gaines (Princeton), Merryman, (Tufts), IH; Hausman (Army), Mead (Rensselaer P. I.), OH; E. Ransome (Princeton), Jordan (Rensselaer), FA; Hadley (Army), Rogers (Hobart), SA; Devens (Army), Fish (Princeton), Garland (Rensselaer), C; Walker (Army), Nolan (Penn State), Nilen (City College of New York), SD; P. Ransome (Princeton), FD; Tenhula (Penn State), CP; Bresnahan (Army), Lalor Rensselaer), P; Ogden (Princeton), Hollenbach (Penn State), G.

South—Chambers (Navy), Ross (Duke), IH; McLean (Navy), OH; Hoyert (Maryland), Kirk (Navy), FA; Corrigan (Duke), Roberts (Johns Hopkins), Carrington (Navy), SA; Hanson (Navy), W. Ruppertsberger (Maryland), C; Houck (Navy), Dubbert (Johns Hopkins), Gilbert (Duke), Bowditch (Swarthmore), SD; Gorsuch (Duke), J. Ruppertsberger (Maryland), FD; Hewitt (Johns Hopkins), CP; Feters (Maryland), P; Courtney (Johns Hopkins), Hoffecker (Maryland), G.

PATTON, OUTSTANDING ATHLETE

So brilliant was the military record of the late Gen. George S. Patton, Jr., that many may have forgotten his achievements as an athlete. He was a poloist until he was 50, a gentleman jockey in his earlier years, a swimmer, and a track and field star.

In 1912 General Patton competed in the modern pentathlon at the Olympic Games in Stockholm and finished fifth. At West Point, which he entered in 1909, General Patton proved to be an outstanding all-around athlete. He was a sprinter, an expert fencer, swimmer, rider, and shot. His exploits earned for him the position of cadet adjutant, second highest post in his class.

DOG RACING

A record for attendance at a dog racing program in the United States was set on June 14, 1946, when 24,250 fans turned out for the 10-race card at the Wonderland course, Revere, Mass.

Greyhound racing is flourishing in England. Britain's 52 tracks hold meetings twice a week throughout the year. The sport has such a hold on the public that crowds of 50,000 and 60,000 are common.

VOLLEYBALL

The Pasadena (Calif.) Aces won the National A. A. U. volleyball championship in 1946 by defeating the San Francisco Embarcaderos in the final, 15-6, 16-18, 17-15. The event was held at Seattle.

MOTORBOATING

the source of power—the internal combustion engine—is the same in the motorboat as it is in the automobile, the history of motorboat racing parallels that of auto racing. There was a sporting risk in driving the early power boats. As soon as they began to show a degree of dependability, there came the informal rivalries on the rivers and lakes. These led to the annual contests of speed and endurance

over marked courses under the control of the American Power Boat Association. The races were severe tests of all parts of power boats and what was learned in the annual Gold Cup competition, which started in 1904, caused a great improvement in the designing of engines and hulls. The development of the outboard motor opened up another branch of power boat competition of wide popularity.

Motorboating Statistics

Source: American Power Boat Association and Motor Boating Magazine.

GOLD CUP WINNERS

Beginning with 1922 the race for the American Power Boat Association Gold Cup was open only to placement boats of over 25 feet in length and powered with motors of not more than 625 inches piston displacement.

(n) Nautical miles.

The 1947 British tennis championships at Wimbledon will be played during the two weeks starting June 23, according to an announcement from the All-England Lawn Tennis Club.

Bishop Loughlin Memorial High School of Brooklyn and Mercersburg (Pa.) Academy won the 1946 A. A. U. high and preparatory schools indoor track and field championships.

AUTO RACING

THE FIRST automobiles on the road were static in action and driving them or even racing in them was considered a trifle silly, hence it became the sporting thing to do. Experimental excursions in crude cars gave rise to rivalry in speed over the high roads of the Gay Nineties and this eventually led to formal contests, the first of which was a road race from Paris to Bremen in 1894, with 26 cars showing up at the starting line. Formal competition in the United States started with a road race in the Chicago district on Thanksgiving Day, 1895, and the winner, J. F. Duryea, covered the road distance of 54.36 miles at the astonishing average of 7.5 miles per hour! Around 1900 Paris became the hub of auto racing in Europe and each year there were raucous, dusty and dangerous races from Paris to Berlin, to Vienna, to Madrid

and other cities on the Continent. Accidents were so numerous to drivers and spectators that, after a gory group of mishaps in the forepart of the Paris-Madrid race of 1903, the contest was halted at Bordeaux by public authorities and all road racing was brought under control. Other kinds of auto racing were exposed to view. Some contests, including 24-hour races for stock models, were held on circular or oval tracks originally built for horse racing. Finally came the special racing strips for autos, including such famous autodromes as Brooklands in England and the Indianapolis Speedway in the United States.

As a test of engine and chassis under severe conditions and great strain, auto racing rendered invaluable assistance in the development of the motor car of today.

How World Records Are Caught

On the hard sand of the beach at Daytona, Florida, 200 feet wide at low tide, was used for many years as the testing ground for speed. In September 1935, a shift was made to the salt beds near Bonneville, Utah, at the suggestion of T. E. Allen of the Contest Board, American Automobile Association.

At Daytona, there is a 10-mile racing stretch; at Bonneville, a 13-mile strip. Each is marked by a post. The actual test-place is between posts No. 4 and No. 5 at Daytona and between No. 6 and No. 7 at

Bonneville. Drivers use earlier miles to get up speed, the latter ones to slow down.

At posts No. 4 and No. 5 (6 and 7 at Bonneville) are steel timing wires, set a few inches above the ground. The timing apparatus registers as the car passes over both wires and thus the officials arrive at the exact time elapsed between posts. To prevent drivers from taking advantage of a favoring wind no recognition is paid to records made in only one direction. They must drive in both directions, and the average time becomes the official time.

A world record for big-car racing over a half-mile track was set by Elbert Booker of Detroit on July 21, 1946, when he traveled over Funk's Dayton (Ohio) Speedway course in 21.35 seconds. Booker's mark, declared official by James Lamb of the AAA, was made only a few minutes after Spider Webb of Bell, Calif., had lowered the old figure of 21.43 seconds to 21.38.

History of the One-Mile Speed Mark

The first recorded effort for one mile was made in 1898 by Chasseloup-Laubat, driving a Jentaud, in France. His average was 39.23 m.p.h. This was increased to 65.79 in 1899 by Jenatzky, also in France. The first man to travel better than 100 m.p.h. was Rigolly, in 1904, at 103.56 m.p.h., followed

by Baras, with 104.53 in the same year. The first over 200 m.p.h. was Major H. O. D. Segrave, who drove at 203.790 in 1927 at Daytona, Florida. Those who drove 300 m.p.h. or better follow (all at Bonneville, Utah):

Date	Driver	Car	Average
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.1292
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.13

ARCHERY

ARCHERY goes back through song and story and classic legend to the primeval days when bows and arrows were means of obtaining food and also weapons in warfare, but the invention of gunpowder in the 14th Century brought about a complete change in the hunting field and in the ranks of war. Archery survived only as a sport. One of the oldest annual sporting events in England is the archery contest for "The Ancient Scorton Arrow" (a little silver dart) that has been held each year in Yorkshire since 1673. The tradition

of archery survived in many European countries and many tournaments were held each year until World War II obliterated them. The American Indians, of course, used the bow and arrow until guns came into their hands through early explorers and settlers. Organized archery as a sport in the United States began with the formation of a club called the United Bowmen of Philadelphia in 1828. The sport languished through the Civil War period but was revived by the formation of the National Archery Association in 1878.

BILLIARDS

APPARENTLY nobody knows where billiards originated. Some trace the game back to ancient Greece or early Egyptian days; others insist it originated in France or England in medieval times. Shakespeare must have believed the Egyptian tale, because in *Antony and Cleopatra* he has Cleopatra saying: "Let's to billiards; come, Charmian." There is an illustration of Louis XIV of France playing billiards in 1694 and using a shovel-shaped stick to set the "cue ball" in motion, from which it is evident that the pointed cue was a later development.

Certainly the game was popular in England and on the Continent in the 17th

and 18th Centuries and early settlers in North America are supposed to have introduced the game here. How to apply "english" to a billiard ball was discovered by Jack Carr, an Englishman, in 1820. A Frenchman named Mingaud is credited with having invented the "draw" shot about the same time and also to have devised leather tips for wooden cues. Championship competition, amateur and professional, is a modern development in billiards. The first formal professional tournament held in the United States took place in New York in 1863 with eight players competing. The first three-cushion tournament was held in St. Louis in 1876.

Maurice Vignaux of France won the first world 18.2 billiard tournament, which was played in Paris in 1903. George F. Slosson and George B. Sutton, representing the United States, competed against Vignaux, who was awarded the championship by a decision based on grand averages.—*Encyc. Brit.*

BOWLING

THE GAME OF bowling that is the favorite sport of millions of "keglers" in the United States is an indoor modification of the more ancient outdoor game that survives as lawn bowling. The outdoor game is prehistoric in origin and probably goes back to Primitive Man and round stones that were rolled at some target. It is believed that a game something like nine-pins was popular among the Dutch, Swiss and Germans as long ago as 1200 A. D., at which time the game was played outdoors with an alley consisting of a single plank 12 to 18 inches wide along which was rolled a ball toward three rows of three pins each placed at the far end of the alley. When the first indoor alleys were built and how the game was modified from time to time are matters of dispute. Much of the confusion arises from a lack of certainty as to which game is meant, "bowls" or "bowling", one with a "jack" and the other with "pins", in historical passages.

It is supposed that the early settlers of New Amsterdam (New York City) being Dutch, they brought their two bowling games with them. About a century ago the game of nine-pins was flourishing in the United States but so corrupted by gambling on matches that it was barred by law in New York and Connecticut. Since the law specifically barred "nine-pins", it was eventually evaded by adding another pin and thus legally making it a new game. The genius who thought up that simple method of outwitting the law and putting a popular game in motion once more remained modestly anonymous. With the increase in the number of pins, the old diamond formation of nine-pins was abandoned for the triangle set-up of ten-pins that remains the rule to this day. Various organizations were formed to make rules for bowling and supervise competition in the United States but none was successful until the American Bowling Congress, organized Sept. 9, 1895, became the ruling body.

The sport of greyhound racing is at least a thousand years older than horse racing, the custom originating in Egypt. The ancient Egyptians raced their greyhounds in open fields with a wild hare as quarry. The fastest greyhounds can average a speed of more than 35 miles an hour over a 525-yard course.—*Encyc. Brit.*

Pedro A. Candioti's fourteenth attempt to swim the 250 miles from Rosario to Buenos Aires last March was his best effort thus far, the South American abandoning his try after being only five miles from his goal. Candioti, a druggist and physical culture instructor, was forced to give up when he began to fall asleep after being in the water for 76 hours.

*Medals to semifinalists: Fleisher Yarn F. C., Philadelphia; Roxbury (Mass.) F. C.; Jeannette (Pa.) F. C.; Swedish American A. A., Chicago, Ill. †Finalists: Powers-Hudson-Essex F. C., Fall River, Mass.; and Swedish American A. C., Detroit, Mich.

IRISH HURLING

County Cork won its fifth Irish hurling championship by defeating Kilkenny, seven goals and five points (26 points) to three goals and eight points (17 points) in the 1946 final, contested at Dublin. The match, played before a record crowd of 70,000, was the tenth between the two teams in the sixteen championships that have been held.

Robert (Bud) Blattner, who played second base for the New York Giants in 1946, is a former world doubles table tennis

champion. Blattner, then 16 years old, paired with Jimmy McClure to win the title in 1937. They also won in 1938.

SKIING

SKIS were devised for utility, to aid those who had to travel over snow. The Norwegians, Swedes, Lapps and other inhabitants of northern lands used skis for many centuries before skiing became a sport. Emigrants from these countries brought skis to the United States with them. The first skier of record in the United States was a mailman by the name of "Snowshoe" Thompson, born and raised in Telemarken, Norway, who came to the United States and, beginning in 1850, used

skis through twenty successive winters in carrying mail from northern California to Carson Valley, Idaho.

Ski clubs sprang up about sixty years ago where there were Norwegian and Swedish settlers in Wisconsin and Minnesota and ski contests were held in that territory in 1886. On Feb. 21, 1904, at Ishpeming, Mich., a small group of skiers organized the National Ski Association that, with the rapid growth of the sport, now has approximately 300 member clubs.

Skiing Statistics

Downhill open and amateur	Steve Knowlton, Aspen (Colo.) Ski Club	2:06.9	—
Slalom open and amateur	Dick Movitz, U. S. Army, Salt Lake City	1:40.4	—
Combined open and amateur	Barney McLean, Zipfelberger, Denver	—	210
Women			
Downhill amateur	Paula Kann, Eastern Slopes, North Conway, N. H.	2:29.3	—
Slalom amateur	Rhona Wurtele, Penguin, Montreal	1:53.2	—
Combined amateur	Rhona Wurtele, Penguin, Montreal	—	245

The term "handicap" comes from the expression "hand in cap", referring to drawing lots, another method of equalizing chances.—*Encyc. Brit.*

Approximately 2,351,000 persons play at least ten rounds of golf a year on the country's 5209 courses. More than 63,000,000 rounds are played each year.—*Encyc. Brit.*

LIST OF OTHER CHAMPIONS FOR 1946

(This compilation does not include champions appearing in tabular matter.)

A titleholder's name appearing without an affiliation indicates that he has won more than one championship and his connection or home city will be found in a previous listing in the same sport.

TRACK AND FIELD

Men's National A. A. U. Outdoor

 Vineyard Lightship-and-Return Race—Mrs. Whitney Henry's Good News (yaw).
 Women's National Champion (Mrs. C. F. Adams Cup)—Edgartown (Mass.) crew; Mrs. Virginia Weston Besse, skipper.
 International Class Sloop Team Match (Amorita Cup)—Bermuda defeated Long Island Sound.
 International Lightning Class—Roger Willcox, Massachusetts Institute of Technology.
 National Comet Class—Philip A. Somervell, Riverton, N. J.

WEIGHT LIFTING

National A. A. U.

- 123 lb.—J. N. De Pietro, Hollywood, Calif.
 132 lb.—Emerick Ishikawa, Detroit.
 148 lb.—Pete George, Cleveland.
 165 lb.—Frank I. Spellman, York, Pa.
 181 lb.—Frank Kay, Chicago.
 Heavyweight—John Davis, Brooklyn.

ARCHERY

Target Shoot

- Men—G. Wayne Thompson, Richmond, Calif.
 Women—Ann Weber, Bloomfield, N. J.
 Junior Girls'—Alice A. Bredhoft, Millington, N. J.
 Junior Boys'—Jay Reeg, St. Louis.

Flight Shoot

- Men—Herb Henderson, Evansville, Ind.
 Women—Millie Hill, Dayton, Ohio.
 Junior Girls'—Peggy Dunaway, Springfield, Ohio.
 Junior Boys'—Richard Knorr, Cincinnati.

BASKETBALL

- New York Invitation—Kentucky.
 Men's A. A. U.—Phillips 66 Oilers, Bartlesville, Okla.
 Women's A. A. U.—Nashville (Tenn.) Goldblumes.

HARNESS RACING

- Aged—Trotter: Kaola, 2.03; Pacer: Blue Again, 2.02¼.
 3-Year-Olds—Trotter: Chestertown, 2.01¼; Pacer: Ensign Hanover, 2.01.
 2-Year-Olds—Trotter: Hoot Mon, 2.03½; Pacer: Poplar Byrd, 2.03½.

FOOTBALL

THE PASTIME of kicking a ball around goes back beyond the limits of recorded history. Ancient savage tribes played football of a primitive kind. There was a ball-kicking game played by Athenians and Spartans and Corinthians 2500 years ago and the Greeks had a name for it: Episkuros. The Romans had a somewhat similar game called Harpastum and are supposed to have carried the game with them when they invaded the British Isles in the First Century, B. C.

Undoubtedly the game known in the United States as Football traces directly to the English game of Rugby, though the modifications have been many and rather sweeping in some directions. There was informal football on our college lawns well over a century ago and an annual Freshman-Sophomore series of "scrimmages" began at Yale in 1840. But the first formal intercollegiate football game in this country was the Princeton-Rutgers contest played at New Brunswick, N. J., on Nov. 6, 1869, with Rutgers winning by 6 goals to 4. Columbia took to the intercollegiate football field in 1870 and Yale in 1872. Soon many colleges were playing football in the autumn.

In those old days games were played

with twenty-five, twenty, fifteen or eleven men on a side by mutual agreement. In 1880 there was a football convention at which Walter Camp of Yale persuaded the delegates to agree to a rule calling for eleven players on a side. In 1882 there was adopted the rule requiring the offensive team to make 5 yards in three downs or surrender the ball to its opponents. The game grew so rough that it was attacked as brutal by many critics and some colleges abandoned the sport. Conditions were so bad in 1906 that President Theodore Roosevelt, an enthusiast for all sports, called a meeting of Yale, Harvard and Princeton representatives at the White House in the hope of reforming and improving the game. The outcome was that the game, with the forward pass introduced and some other modifications of the rules inserted, became faster and cleaner and gradually grew to the tremendous popularity it enjoys today.

Professional football, now firmly established, is an outgrowth of intercollegiate football. The first professional game was played in 1895 at Latrobe, Pa. The National Football League was founded in 1921. The All-America Conference went into action in 1946.

Football Milestones

On Saturday, Oct. 12, 1946, the University of Pennsylvania played its 700th intercollegiate football game and celebrated by crushing Dartmouth, 39 to 6. On that

same day Princeton entertained its old Big Three rival, Harvard, in the Tigers' 600th contest. Harvard beat Princeton, 13 to 12.

Famous Series Records

Until 1883, when scoring by points was generally adopted, scores were kept by goals, touchdowns and safeties. Earlier results of Big Three games: 1873—Prin. 3, Yale 0; Harv. 4G, 2T, Yale 0; 1876—Yale 1G, Harv. 2T; Yale 10, Prin. 0; 1877—Yale 0, Prin. 0; Harv. 1G, 1T, Prin. 1T (Spring); Prin. 1G, 1T, Harv. 2T (Fall); 1878—Yale 1G, 7S, Harv. 13S, Prin. 1, Yale 0; Prin. 1T, Harv. 0; 1879—Harv. 4S, Yale 2S; Yale 0, Prin. 0; Prin. 1G, Harv. 0; 1880—Yale 1G, 1T, 2S, Harv. 9S; Yale 0, Prin. 0; Prin. 2G, 2T, Harv. 1G, 1T; 1881—Harv. 4S, Yale 0; Yale 0, Prin. 0; Harv. 0, Prin. 0; 1882—Yale 1G, 3T, Harv. 2S; Yale 2, Prin. 1; Harv. 1G, 1T, Prin. 1G.

FOOTBALL CHAMPIONS FOR 1946

National (AP poll)—Notre Dame.

Eastern (Lambert Trophy)—Army.

Conferences

Ivy League—Penn, Yale, Harvard (tie).

Big Nine—Illinois.

Southern—North Carolina.

Southeastern—Georgia, Tennessee (tie).

Southwest—Rice and Arkansas (tie).

Pacific Coast—U.C.L.A.

Big Six—Oklahoma and Kansas (tie).

Big Seven—Denver, Utah State (tie).

Missouri Valley—Tulsa.

Border—Hardin-Simmons.

Colored Athletic Assn.—Morgan State.

Report from Ansonia
Special to the Almanac

ANSONIA, Conn.—For the benefit of a golfer who never was able to keep a correct golf score, Mr. H. I. Phillips of Milford,

Conn., the population of Ansonia has been given as 19,210 by a trusted official of that great metropolis.
